

National Population and Housing Census 2011

(Tables from Form-II)

Government of Nepal
National Planning Commission Secretariat
Central Bureau of Statistics

Kathmandu, Nepal

January, 2014

Preface

Central Bureau of Statistics (CBS) Nepal is pleased to bring out the series of results of the National Population and Housing Census 2011 (NPHC 2011). The final result of this census was disseminated in November 2012. Additional national level and disaggregated tables are still under way to disseminate. In fact, the census has enormous potentiality of analyses to be done on demographic, social, economic and spatial characteristics of the population. This report contains statistical tables derived from the questions maintain in 'Form 2' which is administered in sampling basis. Attempt has also been made herein to provide major highlights of the result. I hope, this volume will be very useful and meet the demand of the users related to the information on migration, fertility pattern of child bearing aged married women and economic activities of the population aged 10 years and over. CBS always welcomes comments and suggestions from users which would be valuable for the improvement of our future publications.

On this occasion, I would like to thank Dr. Rudra Suwal, Chief of the Population Section of the bureau for his valuable contribution in the census. I also would like to thank Director Gyanendra Bajracharya and Statistical Officer Yadu Nath Acharya of the Section for their contribution in the operation from preparatory works to the management of the field work, data processing, data analysis, preparation and dissemination of the report. Hearty thanks go to Computer Officer Dol Narayan Shrestha for his valuable contribution in preliminary work of data processing, analysis and tabulation. I want to thank ex-Director Damodar Gnawali, Directors Indra Bahadur Karki and Mahesh Chand Pradhan, Statistical Officers Dina Nath Lamsal and Sunil Kumar Shrestha for handling census administration and data processing. I also appreciate Statistical Officer Prakash Pokharel and Cartographer Officer Damodar Dahal who sincerely fulfilled the responsibilities mainly of logistics management and transportation of census materials to and from districts.

Director Shanker Lal Shrestha and a team of Computer Officers Lila Nath Pandey, Suresh Prasad Kayastha, Shyam Prasad Neupane and Raju Pokhrel were devoted in data processing and tabulation. Similarly, Directors of the GIS Section Pramod Raj Regmi and Shailendra Ghimire, Statistical Officer Binod sharan Acharya and Computer Officer Puspa Poudel had contributed in producing Enumeration Area (EA) maps. They all deserve special thanks.

I would like to thank Mr. Uttam Narayan Malla, the outgoing DG, for his overall guidance and contribution in various census activities.

I would like to thank Mr. Suman Raj Aryal, DDG and Director Mr. Nebin Lal Shrestha who contributed in various stages of the census operation particularly in data verification.

Also, I am thankful to Mr. Prabodh Sagar Dhakal, the then DDG, under-secretaries of the bureau, Ram Bahadur Ghimire, Krishna Rana and Jib Narayan Baral, and Section Officers

Narayan Bhandari, Kiran Raut, Shanker Khanal and Nayab Subba Rishi Kesh Timilsina who did handle administrative, financial matters and census procurement. I would like to thank all Census Officers, Area Supervisors, Supervisors, Enumerators, member of Census Management Groups, staff of CBS and Branch Statistics Offices (BSOs) who were actively engaged in the field work and other census activities. Also, I would like to thank all members of District Census Coordination Committees led by respective Chief District Officer in all districts for their contribution in successfully completing the challenging job of field operation of the census.

Special thanks go to Siddhakali Offset Press who took responsibility of printing census questionnaires and manuals. Also, HDNCG, PHDG & OBCI JV deserves special thanks for undertaking the data procession operation.

I am grateful to all media including telecommunication centers (Nepal Telecom and NCELL) and Civil bank who contributed in raising census awareness among the mass.

I would like to thank all school teachers, government staff of various ministries, departments and offices and also university students who contributed in data collection and supervision of the field work.

Also, I appreciate and would like to thank the members of the National Census 2011 Citizens Observation Committee who did observe the fieldwork in all 75 districts.

I express my gratitude to UNFPA, UNWOMEN, JICA, UNDP, DANIDA, US Census Bureau and other international experts who provided assistance in different stages of the census operation.

Finally, I would like to thank all respondents who provided invaluable information during the field operation and appreciate all those who had extended hands in this national endeavor and helped to make the census a grand success.

January, 2014

An introduction to the National Population and Housing Census 2011

1. Introduction

National population and housing census 2011 (NPHC2011), marks hundred years of census taking in Nepal. Nepal has been conducting population censuses almost decennially and the census 2011 is the eleventh in series. The first population census was conducted in 1911 A.D. (1968 B.S.). However, the census conducted in 1952/54 is considered to be the first modern census of Nepal introducing internationally comparable concepts, definitions and classifications. Computer processing was introduced for the first time in 1971 census using IBM 1401. NPHC 2011 carries special features of having scientific questionnaires, detailed EA maps for urban and Village Development Committees (VDC) maps for rural areas, ever most inclusive field staff, extensive publicity, independent observance by civil society, most economic operation based on domestic resources and most reliable data processing.

2. Census organization of NPHC 2011

A Steering Committee headed by the Honorable Vice Chairman of the National Planning Commission (NPC) was formed that consists seven secretaries of various ministries, representatives of Dalit Commission, Women's Commission, Janajati Pratisthaan and Director General (DG) of the CBS as member secretary. The Steering Committee invites subject matter specialist and other distinguished personalities in the meeting. A Technical Committee was formed under the chair of the DG, CBS. There are special thematic committees formed for publicity, data processing etc. Various working groups were formed for questionnaire design, formation of economic classifications, post enumeration surveys, monitoring of data processing, classifications of caste ethnicity, language and religion. Population Section of the Social Statistics Division took charge of the census operation.

District Census Coordination Committee under the chairmanship of the CDO and participation of other officer-in-charge of district offices and representatives of political parties was formed to undertake the fieldwork at district level.

3. Basic concepts and reference date

A person was counted at his/her usual place of residence. Usual place of residence is defined as a place where a person had been living or intends to live for at least six months. A person absent from usual place for short period for the purpose of treatment or pilgrimage or similar causes is treated as present in the usual place. Persons away or absent from birth place or usual place for employment or study or business purpose is considered absent population and

thus, not counted as present population. However, homeless or mobile population was counted at the place where they were traced on the last day of enumeration or 27 June 2011. This method in brief, is termed as 'modified de jure'. Questions on literacy and level of education were asked to all persons aged 5 years and above. A person who can both read and write in any language is defined as a 'literate'. Similarly, questions on activities were asked to all persons of age 10 years and above living in the households selected systematically. Accordingly, his or her activities, occupation and industry of current employment were recorded using Individual Form 2 in the census.

4. Census questionnaire

In the Population and Housing Census(PHC) 201, there were two types of questionnaire – complete enumeration (Form I) and sample enumeration (Form II) for few items. Complete list of households was prepared during May and June 2011, a month before the main census. Listing schedule contains questions on number of house, households, household members by sex, agricultural land operated and livestock owned by households and operation of small scale non-agricultural activities. This form has provided the sampling frame for the selection of households to be enumerated using Form II.

As a follow up of the earlier census, questions on migration, fertility, labour force, occupation, industry, employment status and living arrangement of children (under the age 16) were asked under form-II to every eighth household selected systematically. In this report, the results derived from the sample questionnaire of PHC are accommodated.

5. Sample methodology

Sample scheme is used in Population and Housing Census(PHC) for the first time in 2001. The procedure of sample selection of housing units in each enumeration area (EA) is systematic sampling design. Systematic sampling is carried out for all general households (excluding institutional households) by first computing the sampling interval which is equal to $1/f$ (1/8). The selection within each EA was carried out by the census supervisor and enumerated by enumerators.

The Sample Design for canvassing Form 2 in selected households was Single Stage Systematic Sampling. Such a design is generally very convenient to implement and errors in selection can be easily detected.

The ratio estimation method is used in making estimates from the sample. It ensures that the sample estimates are generally consistent with the 100 percent counts and the estimates have smaller sampling errors. In general, the ratio estimation method is shown as

$$y''_{hi} = \sum_j \frac{y_{hij}}{x_{hij}} X_{hij}$$

Where, is y''_{hi} the ratio estimator for the population with a certain characteristic in the ith domain and in the hth district.

The number of persons found in the sample with a certain characteristic in the jth tabulation group, in the ith domain and in the hth district is y_{hij} . x_{hij} is the total number of persons found in the sample in the jth tabulation group, in the ith domain and in the hth district. X_{hij} is the total number of persons from the 100 percent count, found in the jth tabulation group, in the ith domain and in the hth district.

Desirable size of population for the estimation was determined to at least 10000 households or 50000 population. Based on the criteria, sampling scheme was introduced in 69 districts and 30 municipalities complete enumeration was administered in six mountain districts and 28 municipalities (given in Annex) where population is less than 50,000.

Major Highlights

1. Population by place of birth: Among 2,62,53,828 non-institutional population, 97.22 percent (2,55,24,611) are native born and 1.83 percent (4,79,625) are foreign born. In gender perspective, 97.92 (1,07,71,188) percent of male and 96.57 percent (1,09,65,352) of female are native born and 1.12 percent (1,41,165) of male and 2.49 percent (3,38,460) of female are foreign born.

2. Native born population: Most of the native born population i.e. 85.16 percent (2,17,36,541) have their birth place in the same district that they were usually residing at the time of enumeration whereas 14.84 percent (37,88,070) were born in other districts. Among persons having birth place different from the currently residing district (enumerated district), 80.08 percent (30,33,574) were born in rural areas whereas 6.37 percent (2,41,437) in urban areas.

3. Place of birth by ecological belts: Among the native born population having place of birth different from the currently residing district, 10.74 percent (4,06,962), 64.96 percent (24,60,799) and 22.23 percent (8,41,987) were born in mountain, hill and tarai districts respectively.

4. Length of stay in the enumerated districts: Among native born population whose birth place is different from the currently residing district, 44.17 percent (16,73,185) were usually residing in the enumerated district for ten years and more. Similarly, 25.94 percent (9,82,772) were residing for 1 to 5 years, 19.22 percent (7,28,176) for 6 to 10 years and 4.30 percent (1,63,044) for less than one year. Remaining persons did not report their duration of stay in the enumerated district.

5. Reason of stay in the enumerated districts: For the native born population whose birth place is different from the currently residing district, the predominant cause of residing in the enumerated district is found to be marriage (23.59%). Other causes are dependency (20.36%), agriculture (14.90%), study (13.38%), service holding (10.86%), business (5.94%) and conflict (0.56%). Similarly, 4.65 percent of the native born population reported other causes of stay in the enumerated district rather than district of their birth.

6. Ever married women and child bearing: Among 54,56,412 ever married women of 15 to 49 years of age, 15.95 percent did not give live birth. The largest proportion of the ever married women (23.55%) gave birth of two children during their child bearing age. About 18

percent gave birth of 3 children and 16.08 percent gave birth of 1 child only. Less than one percent gave birth of 9 and more children.

7. Children ever born: Altogether 1,25,95,524 children were reported to be born alive from the women of age 15 to 49 years. Among them 52.24 percent (65,80,140) were son and 47.76 percent (60,15,383) were daughter. About 94 percent (1,18,22,771) of the total children ever born seems to be still alive and 6.14 percent (7,72,752) were died.

8. Children born in the past 12 months: During the last 12 months from the day of census enumeration, 83.26 percent (45,42,934) of the ever married women of age 15-49 did not give live birth whereas 5.95percent (3,24,171) women gave live birth to 3,26,725 children. Among the live born children, 50.51 percent (1,65,013) were son and 41.78 percent (1,36,502) were daughter Largest number of the children i.e. 1,23,075 (37.67%) were born from the mother of age 20 to 24 years.

9. Activities performed during last 12 months: Among 2,04,95,515 of the population ten years of age and over, 72,19,248 person reported of involvement in "own agricultural activities" at least one month during the last 12 months from the date of enumeration. Similarly, the number of persons involved in "wage/salary earning activities" and "own non-agricultural business activities" constitutes 35,21,487 and 20,46,964 persons respectively. Extended economic activities were performed by 20,59,812 persons whereas 7,07,366 persons were engaged in seeking job. Altogether (68,02,882 performed household chores; 60,63,148) persons performed study and 22,98,694 persons performed no activities.

10. Economically active population: Economically active population are those who perform at least one month of economic works (agricultural activities, wage/salary earnings, own non-agricultural business activities, extended economic activities and seeking jobs) in the reference period (during the period of 12 month preceding to the day of census enumeration). Based on this definition, 54.20 percent (1,11,08,915) of the population ten years of age and over are economically active whereas 44.77 percent (91,75,645) are economically not active. Among the total male population aged 10 years and over, 62.48 percent (60,64,134) are economically active whereas 46.76% (50,44,781) of the female of same age group are economically active.

11. Usually economically active population: Among 1,11,08,915 economically active population aged 10 years and over, 90.51 percent (1,00,55,186) are usually active (performed economic activities for 6 months and over in the preceding 12 months of enumeration) and remaining 9.49 percent are usually not economically active. In gender perspective, 94.80

percent (57,48,811) of the economically active male and 85.36 percent (43,06,375) of the economically active female are usually active.

12. Usually employed population: Usually economically active population is the sum total of usually employed (persons having duration of performing economic activities greater or equal to the duration of not performing) and usually unemployed (persons having duration of performing economic activities less than the duration of not performing) persons of age ten years and over. Among the total usually active population, 98.37 percent (98,91,098) are usually employed and 1.63 percent are usually unemployed. Similarly, 97.89 percent (57,48,811) of usually active male and 99.00 percent (43,06,375) of usually active female are usually employed.

13. Usually active population by main occupation: Among usually active population (1,00,55,186), only population 99,29,562 persons of age 10 years and over (mainly performed own agricultural, wage/salary earnings, own non-agricultural business and extended economic activities) reported their major occupation adopted during one year preceding the day of enumeration. The largest proportion of the usually active population has adopted agriculture, forestry and fishery (60.43% i.e. 60,00,478 persons) as main occupation followed by elementary works (9.94% i.e. 9,87,487 persons). Similarly, 50.50 percent (28,56,516) of usually active male and 73.57 percent (31,43,963) of usually active female have adopted agriculture, forestry and fishery related works as main occupation.

14. Usually active population by main industry: The economic activity of about two-third (64 percent; 63,55,735) of the usually active population are related to agriculture, forestry and fishing industry. In this sector, 54.49 percent (30,81,814) of the usually active male and 76.61 percent (32,73,921) of the usually active female are engaged. Wholesale and retail trade; repair of vehicles & motorcycles seems to be the second dominant industry that provides employment to 7.01 percent (6,95,915) of the usually active population.

15. Employment status of usually active population: The usually active population of age 10 years and over performed economic activities as one of the four different status of employment. The largest proportion i.e. 65.82 percent (65,35,825) of economically active population performed economic activities as "own account worker". More than half (57.63 percent) of the usually active male and three-fourth (76.66 percent) of the usually active female performed their economic activities in this status of "Own account worker". Other status of employment as employee, employer and unpaid family workers constitute 2.15 percent, 27.47 percent and 1.33 percent of the total usually active population respectively.

16. Major reason of not being active: Among 2,04,95,515 of the population ten years of age and over, 1,02,29,373 are either economically not active (did not perform any economic activities in reference year) or usually not active (performed economic works less than 6 month in reference year). The predominant cause of not being economically active or usually active is seemed to be 'study' which constitutes 59.03 percent (60,38,845) of the population ten years of age and over. Household chores (28.85%), aged (6.17%), chronic illness (1.18%) and pension/income (1.04%) are other causes of not being economically active or not being usually active.

17. Living arrangement of children below 16 years of age: Out of total non-institutional population altogether 9,848,753 children were below 16 years of age. The largest portion i.e. 87.08 percent of the children were living with their parents. Similarly, 9.11 percent were living with their mother only, 0.68 percent with father only, 0.19 percent with father and step mother, 0.05 percent with mother and step father and 0.48 percent with other relatives. Only 0.08 percent were living with employer.
