VDC	Village Development Commit

# Chapter I

## INTRODUCTION

### 1.1 Background

The Department of Education (DOE) has been publishing a consolidated report from 2005 and it is a continuation of the same aim of producing a comprehensive analytical report providing a holistic overview of the school level educational statistics of Total, 2007. Its main purpose is to furnish the broad national as well as ecological and district level trends in terms of access, efficiency, quality and equity along with performance and programme indicators of the Education for All (EFA) and the Secondary Education Support Programme (SESP). The Consolidated Report is the consolidation of school level educational information through Flash Reports to support the monitoring of EFA, 2004 - 2009. Thus it is presented as an attempt to help users and readers to identify the changing trends and programme impact of EFA on the school education system in the country. It also traces the progress of the EFA indicators and assists in decision making to improve the programme.

This report includes the analysis of schools, student enrolment and teacher information with disaggregated data. In addition, it also covers the indicators of student participation; GIR, GER, NER and GPI by level as well as the students' performance indicators and internal efficiency of the education system. Moreover, this report presents the availability of school facilities and services in terms of teachers, textbooks, transitional language support; access to drinking water, classrooms, toilet facilities and basic learning materials at the school level.

### 1.2 Objectives

The main objectives of this Report are:

- To evaluate and analyze the broad trends of school level educational information,
- To compare and assess the progress of EFA indicators,
- To appraise and evaluate the overall functioning of the school education system,
- To facilitate the use of data for future planning, monitoring and evaluation.

### 1.3 Methodology

- The consolidated report is prepared based on the School Level Educational Information (EMIS) of Total 2003, Flash report 2004, 2005, 2006 and 2007.
- Ecological belts along with districts have been taken as the main unit of analysis.
- Population data has been generated through Population Projection for Total 2001-2021, jointly published by the Central Bureau of Statistics (CBS) and Ministry of Population and Environment (MOPE).
- The schools are counted by the level of education offered and as a unit by the total grades offered. For example, a school offering grades 1-10 is counted at three levels - as a primary, lower secondary and secondary level. Similarly, this school is counted as one school (a unit).

## **1.4 Features of report**

The Consolidated Report, 2006 is mainly focused on the interpretation of EFA and SESP indicators based on school, student, teacher and programme implementation data. The report has been grouped into six chapters.

- The first chapter covers the general background of the education system, objectives of the report, methodological approach, features and limitations of the report.
- The second chapter of the report includes the trends of schools in the country,
- The third chapter of the report presents the analysis of enrolment and participation, which includes the number and trends of student enrolment by level as well as the indicators.
- The fourth chapter of the report focuses on internal efficiency and covers the indicators on promotion, repetition, dropout, survival rate and transition rate.
- The fifth chapter of the report analyzes teacher information and ratios at different levels and school types.
- The sixth chapter focuses on physical infrastructure information covering availability of free textbooks in the primary level, number of schools with transitional language support, scholarships, disabilities enrolment and current status on infrastructure at the school level.

The main emphasis focuses on trend analysis of enrolment, quality, internal efficiency and equity indicators and makes assessments on further improvement on EFA and SESP indicators. The detailed datasheets have been annexed in the end of the report including statistical tables of school, enrolment, teacher, etc. It also contains the definition of indicators and a list of abbreviations.

## **1.5 Limitations of the report**

- This report could not present separate information on Madrassas, Gumbas and other religious schools.
- This report does not capture comprehensive information about higher secondary education and the information of proficiency certificates level as well as the information of technical and vocational education.
- The report could not capture the financial, learning achievement and the literacy information.

## Chapter II

### SCHOOL INFORMATION

#### 2.1 Background

The school education system in Nepal is structured as ECD/PPC, primary, lower secondary, secondary and higher secondary education. Many of these schools include Early Childhood Development (ECD) or pre-primary classes (PPC) of one to three years duration. In institutional schools they are generally called nurseries or kindergartens whereas in community schools they are known as “Shishu Kachha” (pre-primary class). In addition, there are community-based ECD centres that serve 3-4 year olds and are located near the vicinity of the communities. Primary schools provide five years of education to the 5-9 year old school-going age children and consist of five grades from 1-5. Age 5 is the prescribed age to get entry into grade one in the school education system. The availability of schools<sup>2</sup> within reasonable walking distance to all 5-9 years age group children is the first step towards achieving universal primary/basic education by the year 2015.

The lower secondary education consists of three years with the grades 6-8. Similarly, secondary and higher secondary education comprise two years each with grades 9-10 and grades 11-12 respectively. Altogether school education continues for 12 years excluding pre-school education<sup>3</sup>. In addition to this there are some campuses affiliated to the Tribhuvan University that offer proficiency certificates of two years equivalent to higher secondary education. Moreover, diploma courses of three years equivalent to higher secondary education are also offered by the institutions of the Council for Technical Education and Vocational Training (CTEVT).

The schools are categorized as community aided, community managed, community unaided and institutional schools. The community aided schools are those schools which receive regular government grants in the form of teachers’ salary for the approved positions, earmark grants, block grants and incentive grants. The government has adopted the policy for aided community schools to transfer their management responsibility to the local community. These schools receive all the regular grants and other additional supports from the government for improving their effectiveness in management and teaching learning environment to ensure learning outcomes as expected by the curriculum.

The unaided community schools do not receive regular government grants but they receive fixed basic teacher salary grants and block grants. The institutional schools depend on

---

<sup>2</sup> Both community (government aided/unaided) and institutional (private) schools operate in Nepal. The Nepal Living Standards Survey II, 2003-2004 demonstrated the access of 91.4% households to reach the nearest primary school within half an hour with variation between urban (98.8%) and rural (89.9%). The lowest access (77.7%) to the nearest primary school within 30 minutes was found in the eastern mountains and hills i. e. 22% households had to travel more than 30 minutes to reach the nearest primary school. The variation for the households between the poorest and the richest consumption quintiles was found at 9.5% i. e. only 86.5% households in the poorest consumption quintile could reach the nearest primary school within 30 minutes compared to 96% in the richest quintile.

<sup>3</sup> Generally the formal schooling starts from grade 1.

parental support and are managed and owned by the individual or private and public trusts. The institutional schools charge tuition and other fees to the students. The following figure shows the school education system in the country.

**Fig. 2.1 School education structure in Nepal**

## 2.2 Early Childhood Development / Pre-Primary Classes (ECD/PPCs)

International experiences suggest that pre-primary and ECD programme are the foundation of basic education and include a wide range of programme aiming at the holistic physical, cognitive and social development of children before they enter into primary education. It is considered as a way of reducing under age children and minimizing overcrowding in grade 1 at the primary level. Especially, the ECD/PPCs programme focuses to the under five year's children in the community.

The following table 2.1 presents the number of recorded ECD/PPCs by ecological belt in 2007. In total there are 19,936 ECD/PPCs are running in the country, of this 16,523 are community schools and community based ECD/PPCs, and 3,413 are institutional school based PPCs (See annex: I).

**Table 2.1 Total number of recorded ECD/PPCs by eco-belt, 2007**

Eco-belts	Total recorded number of community based ECD/PPCs		
	Community & school based ECD/PPCs	Institutional PPCs	Total
Mountain	1,383	78	1,461
Hills	7,059	857	7,916
Valley	442	1,073	1,515
Terai	7,639	1,405	9,044
Total	16,523	3,413	19,936

Source: Flash I 2007

## 2.3 School

Table 2.2 below presents the trend of schools distribution from 2003 to 2007 by level and unit. It shows both the levels and the total number of schools have significantly increased from 2003 to 2007 by an annual average 1.7, 4.2, and 5.6 percentage for primary, lower secondary, and secondary level respectively. The total schools in the country have also increased by 1.8%.

Although the level and number of schools show increasing trends at the national level, there are 11 districts (Ilam, Udayapur, Dhading, Sarlahi, Rautahat, Mustang, Arghakhanchi, Dolpa, Salyan, Jajarkot and Darchula) where the number of schools decreased in 2007 compared to 2003. The remaining districts show significant gains in level and number of schools. The reasons for a decrease in the number of schools at districts level might be the under reporting of the schools or merging of two or more schools into one school (See annex: III)

**Table 2.2 Trends of total recorded schools by level and unit, 2003-2007**

Levels/unit	2003	2004	2005	2006	2007	Average annual growth rate (%)
Primary level	27,268	24,746	27,525	27,901	29,220	1.7
Lower secondary level	8,249	7,436	8,471	8,880	9,739	4.2
Secondary level	4,741	4,547	5,039	5,329	5,894	5.6
Total (Units)	27,415	26,277	28,026	28,131	29,448	1.8

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

## 2.4 School running by grade

Table 2.3 below explains the distribution of reported number of schools running by grade from 2003-2007. These categories provide substantial support for restructuring schools into 1-8 basic and 9-12 secondary education system in the country. Currently, none of the schools are running with the grade 9-12 in secondary level but there are 2,204 lower secondary schools found with the grade 1-8. Primary schools with the grades 1-5 were the most numerous in the country in 2007.

**Table 2.3 Distribution of reported schools by grades, 2007**

Grade	2003	2004	2005	2006	2007
1	409	287	178	218	567
1-2	738	660	530	483	556
1-3	4,324	4,288	4,126	4,575	4,399
1-4	1,056	1,033	956	1,163	1,392

## 2.5 Proportion distribution of schools by eco-belt

### 2.5.1 Primary level

The following graphs 2.1 depict the number and distribution of primary school level by eco-belt in 2003 to 2007. It shows that the over all trend of proportional distribution of primary school level by eco-belt has not considerably changed from 2003 to 2007. Compared to the proportion in 2003, there is a slight decrease in Terai and Valley in 2004, whilst this is followed by an increase from 2004 to 2007 (See annex: III).

**Graph 2.1 Proportion of primary level school by eco-belt, 2003-2007**

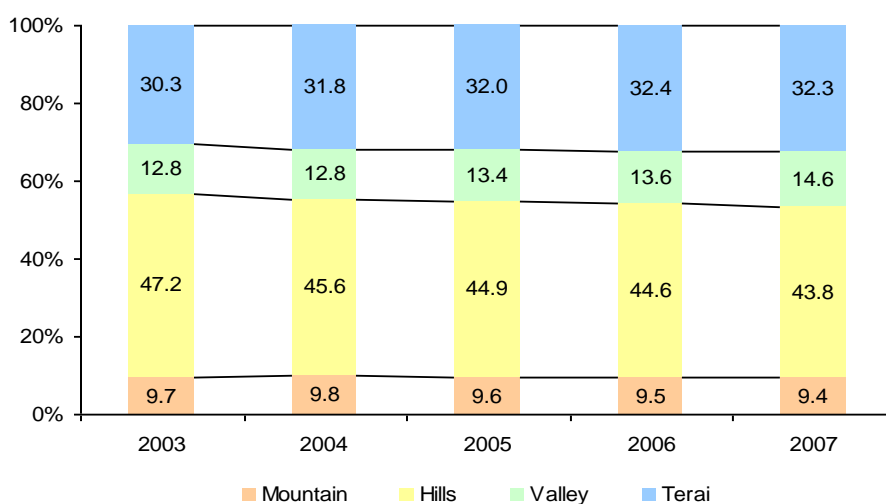

Source: School level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

### 2.5.2 Lower secondary level

Similarly, the following graph 2-2 shows the number and distribution of lower secondary schools by eco-belt from 2003 to 2007. There were 8,249 lower secondary schools in 2003 which reached 9,739 in 2007. The highest proportion of lower secondary schools is found in Hills in all years. Although the number of lower secondary schools is increasing, the proportion shows there are no significant differences in the proportional distribution over the five years period (See annex: III).

**Graph 2.2 Proportion of lower secondary schools by eco-belt, 2003-2007**

Source: School level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

### 2.5.3 Secondary level

Likewise, the graph 2.3 below shows the trends of secondary schools from 2003 to 2007. The data found a decline from 2003 to 2004 and an increase from 2005 to 2007. The fluctuation of the data reveals the under reporting of secondary schools in 2004. The chart also reveals a similar proportional distribution of secondary schools as the proportional distribution of primary and lower secondary level (See annex: III).

**Graph 2.3 Proportion of secondary schools by eco-belt, 2003-2007**

Source: School level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

### 2.6 Ratio of schools

The table 2.4 below shows the ratio of lower secondary to primary, secondary to lower secondary and higher secondary to secondary levels of schools from 2003 to 2007. Compared to the ratios in 2003 and 2004 it shows there has been a more pronounced improvement from 2005 to 2007 (See Annex: IV).

**Table 2.4 Trends of school ratios (in level) in 2003-2007**

	Lower secondary to Primary	Secondary to Lower secondary	Higher secondary to Secondary
2003	5.5	0.7	10.6
2004	3.3	1.6	7.6
2005	3.2	1.7	10.1
2006	3.1	1.7	4.5
2007	3.0	1.7	3.8

Source: School Level Educational Information of Nepal, 2003 and Flash I Reports 2004-07

The district level analysis of the ratios of schools in 2007 shows there are 55 districts with a high ratio from lower secondary level to primary level of this 3 districts namely; Dolpa, Salyan and Mugu have the highest ratio of lower secondary level to primary level (i.e. 1:5 or one lower secondary level can serve more than 5 primary levels). Similarly, there are 42 districts with a high ratio from secondary level to lower secondary level of this 10 districts namely; Darchula, Pyuthan, Dolpa, Bajura, Rolpa, Jumla, Rukum, Humla, Jajarkot and Manang have the highest ratio of secondary level to lower secondary level (i.e. more than

1:2.1 or one secondary level can serve more than 2 lower secondary levels). Likewise, there are 45 districts with a high ratio from higher secondary level to secondary level of this 7 districts namely; Myagdi, Pyuthan, Mustang, Jumla, Humla, Bajura and Rolpa Darchula, Pyuthan, Dolpa, Bajura, Rolpa, Jumla, Rukum, Humla, Jajarkot and Manang have the highest ratio of higher secondary level to secondary level (i.e. more than 1:7 or one higher secondary level can serve more than 7 secondary levels).

## Chapter III

### ENROLMENT

#### 3.1 Background

Enrolment shows the level of participation in education. The government has placed emphasis on increasing enrolment in schools by various means of support through the EFA, SESP and other programmes; particularly focusing on the enrolment of girls, Dalits and disadvantaged community children.

#### 3.2 Enrolment in ECD/PPCs

ECD/PPCs programmes are inevitable for reducing educational wastage especially in the early grades of primary education. Table 3.1 below shows the enrolment trend in ECD/PPCs programme from 2003-07. Compared to the enrolment in 2003 the enrolment in the following years has increased by more than three times.

The increment in enrolment shows that girls' enrolment increased more than boys' enrolment during the five years. This indicates an awareness of local people and the access to ECD/PPCs programme are increasing year by year. In this respect the institutional schools have also played a vital role to achieve this progress (See annex: V).

**Table 3.1 Enrolment trends in ECD/PPCs by sex, 2004-2007**

	2003	2004	2005	2006	2007	Average annual growth rate (%)
Girls	11,3653	23,5512	42,6062	26,4890	378,437	35.1
Boys	14,3468	27,6639	49,6495	28,9094	444,669	32.7
Total	25,7121	51,2151	92,2557	55,3983	823,106	33.8

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

#### 3.2.1 Enrolment share in ECD/PPCs by social groups

The graph 3.1 below shows the enrolment of children in ECD/PPC by social groups and sex in 2007-08. Out of total enrolment in ECD/PPCs in 2007-08 there were 378,437 girls and 444,669 boys. The share of Dalit and Janajati in total enrolment is 13.3% and 38.9% girls and 12.4% and 37.6% boys respectively. Similarly, the highest percentage of Dalit and Janajati students are in hill and Valley zones whereas the lowest percentage of Dalit and Janajati students are in Valley and Mountain zones.

The GPI in ECD/PPCs enrolment is 1.07% for Dalit, 1.03% for Janajati and 0.96% for other students. Compared with the national level, the Dalit enrolment is relatively higher in Mountain and Hills zones whereas it is quite low in Valley. Similarly, the Janajati enrolment is comparatively higher in Valley than other ecological zone (See annex: VI).

**Graph 3.1 Share of enrolment in ECD/PPCs by eco-belt and social groups, 2007-08**

Source: Flash I Reports 2007

The following table 3.2 presents the trends of enrolment share of Dalit and Janajati in total enrolment of ECD/PPCs for 2004 to 2007. Over all, compared to 2004 and 2007, the share of Dalit and Janajati enrolment has decreased.

**Table 3.2 Share of Dalit and Janajati enrolment in total enrolment of ECD/PPCs, 2004-2007**

	2004		2005		2006		2007	
	Dalit	Janjati	Dalit	Janjati	Dalit	Janjati	Dalit	Janjati
Girls	14.0	43.1	15.2	39.2	15.2	41.4	13.3	38.9
Boys	13.9	41.4	14.7	38.3	14.7	40.9	12.4	37.6
Total	13.9	42.2	14.9	38.7	15.0	41.1	12.9	38.2

Source: Flash I Reports, 2004-07

### 3.2.2 ECD/PPCs GER

The following Graph 3.2 and table 3.3 show the trends of ECD/PPCs GER in 2004-07. In 2001, the GER in ECD/PPCs was 13% while the government has set the 51% EFA targets for 2004-09 and 80% by 2015. The Flash I, 2007 data shows that the country has achieved 60.2% GER in ECD/PPCs. It shows the GER for ECD/PPCs is gradually increasing.

The analysis of the ECD/PPCs GER by eco-belt in 2007 shows the Mountain belt has 39.8% whereas it is 52.0% and 58.1% GER for Hills and Terai belts respectively. The highest GER is observed in the Kathmandu valley with 175.4%. It shows more institutional schools with pre-primary classes are located in the urban area (See Annex: VII).

Graph 3.2 GER trend on ECD/PPC by sex, 2004-2007

Table 3.3 ECD/PPC GER in 2004-07 by eco-belt

Eco-belt	2004			2005			2006			2007		
	Girls	Boys	Total	Girls	Boys	Total	Girls	Boys	Total	Girls	Boys	Total
Mountain	9.8	11.6	10.7	50.8	60.0	55.4	37.3	36.4	36.8	37.8	41.7	39.8
Hills	34.3	35.3	34.8	68.4	70.3	69.4	38.3	37.9	38.1	50.9	53.1	52.0
Valley	160.6	165.7	163.3	200.5	208.0	204.4	129.0	127.0	128.0	171.8	178.8	175.4
Terai	32.3	38.3	35.4	55.4	64.2	59.9	35.1	37.4	36.3	53.1	62.9	58.1
Total	37.3	41.1	39.4	66.6	73.1	69.9	40.9	41.9	41.4	56.8	63.4	60.2

Source: Flash Reports 2004-07

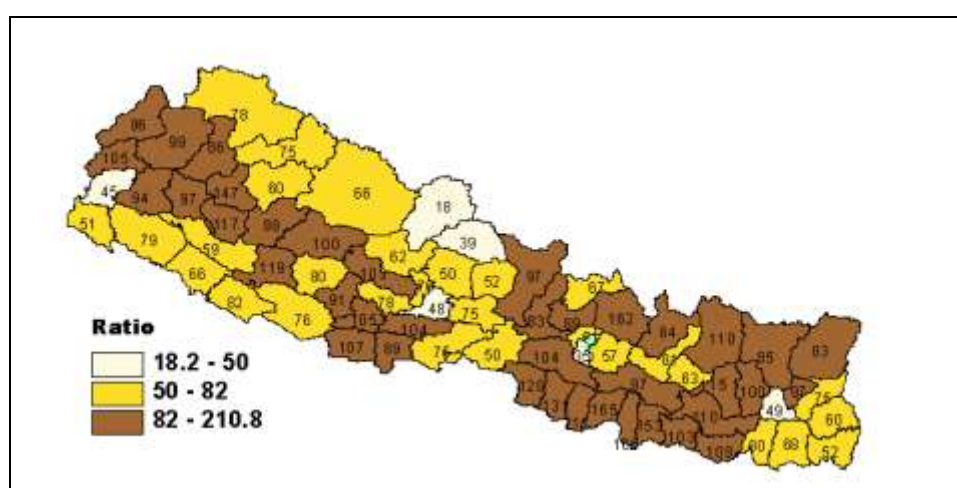

The maps 3.1 and 3.2 below present the district wise ratio of ECD/PPCs programme and the 3-4 years' population and the Gross Enrolment Rate in 2006. On average the ratio of ECD/PPCs programme and the 3-4 years' population is 1:82. The highest ratio was found in Rautahat district and the lowest one is in Mustang district. The comparison between the ratio of ECD/PPCs programme and the 3-4 years' population with GER shows a large gap is found in some districts.

There are 5 districts (Saptari, Rukum, Humla, Udayapur, and Ilam) with low GER and high ratio of ECD/PPCs programme and the 3-4 years' population. A very low GER (less than 10%) could be the result of under reporting of ECD/PPCs enrolment. Similarly, there are 3 districts (Mustang, Bhaktapur, Lalitpur) with high GER and a low ratio of ECD/PPCs programme and the 3-4 years' population. Although, on average the GER in ECD/PPCs programme is less than 50%, some districts have achieved more than 100% GER in 2006. A higher GER indicates over and under age children being enrolled in ECD/PPC programme.

Map 3.1 Gross Enrollment Rate (GER) in ECD/PPCs, 2006

Map 3.2 Ratio of ECD/PPCs and 3-4 years age group population, 2006

### 3.3 Percentage of students in grade 1 with ECD/PPCs experiences

The table 3.4 shows the percentage of students in grade 1 with ECD/PPCs experience in 2003-07. In 2003 the percentage of students in grade 1 with ECD/PPCs experience was 7.7% and reached to 33.1% in 2007 which is almost 27% lower than the EFA target for 2009. This indicates that much effort is needed to meet the target set in the EFA 2004-09 ( See Annex: VIII).

Table 3.4 Percentage of students in grade 1 with ECD/PPCs experiences

	2003	2004	2005 <sup>4</sup>	2006	2007
Girls	7.5	10.7	NA	18.1	32.0
Boys	7.8	11.1	NA	18.4	34.2
Total	7.7	10.9	NA	18.3	33.1

Source: School level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

<sup>4</sup> Since the total numbers of children in grade 1 with ECD/PPCs experiences were not available, the indicator is not presented for 2005.

The percentage of Dalit and Janajati students in grade 1 with ECD/PPC experiences also increased in the school year 2007 from the school year 2004. The Flash report I, 2007 shows the percentage of Janajati students with ECD/PPCs experiences is 33.7%, whereas it is 25.9% for Dalit children. The high percentage of students enrolled in grade 1 with ECD/PPCs experience indicates the high participation of students in grade 1 with the pre-preparation of primary education.

### 3.4 Primary enrolment

#### 3.4.1 Enrolment trends

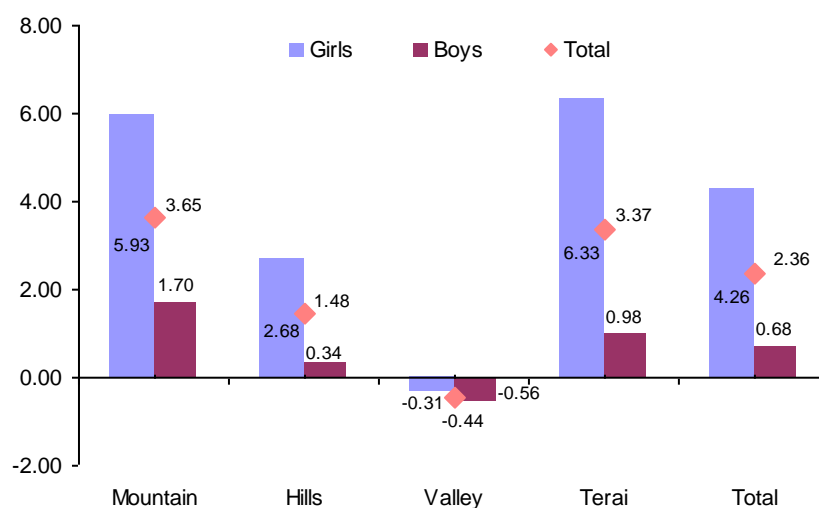

The table 3.5 and graph 3.3 below depict the enrolment trends at primary level in 2003-07. The total enrolment in 2003 was 4,025,692 and reached 4,418,713 in 2007 with an average annual growth of 2.4%. Compared with the total growth rate in enrolment, the highest growth have been found in Mountain and Terai belts with 3.7% and 3.4% whereas the lowest growth rate is in Valley belt. Although the population in migration seems to be high in Valley the enrolment growth rate for Valley shows a negative trend in the period of 2003-2007. Overall the enrolment growth is higher for girls than growth of boys and total enrolment (See Annex: IX).

**Table 3.5 Enrolment trends at primary level by eco-belt & sex, 2003 – 2007**

Eco-belt	2003		2004		2005		2006		2007	
	Girls	Total	Girls	Total	Girls	Total	Girls	Total	Girls	Total
Mountain	144,340	323,545	151,568	336,491	166,201	358,032	180,452	379,892	181,778	373,494
Hills	842,401	1,768,514	872,592	1,808,105	919,349	1,871,671	944,339	1,902,248	936,463	1,875,265
Valley	114,717	239,057	109,201	228,125	128,515	269,014	113,411	234,112	113,311	234,868
Terai	726,129	1,694,576	731,651	1,657,324	920,581	2,003,980	943,044	1,998,808	928,211	1,935,087
Total	1,827,587	4,025,692	1,865,012	4,030,045	2,134,646	4,502,697	2,181,247	4,515,059	2,159,763	4,418,713

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

**Graph 3.3 Average annual growth at primary level (2003-2007)**

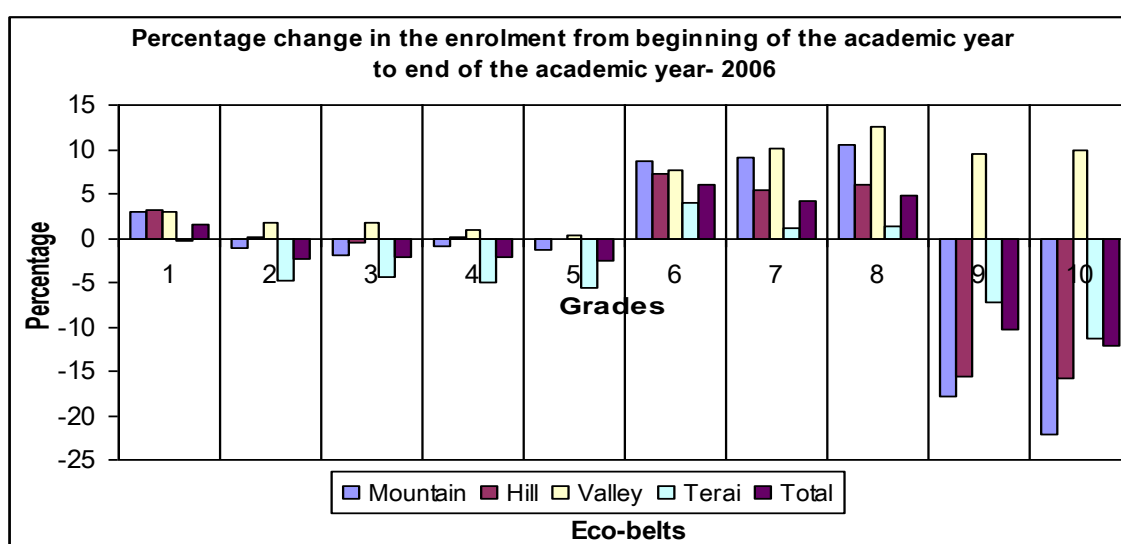

### 3.4.2 Percentage change in the enrolment from beginning of the academic year to end of the academic year- 2006

The graph 3.4 below shows percentage change in the grade wise enrolment from beginning of the academic year to end of the academic year in 2006 by eco-belt. It indicates that the both status of the enrolment, that is; in some grades the enrolment have decreased as well as increased at the end of the academic year. In total the enrolment in grade 1, 6, 7 and 8 has increased whereas in other grades it has decreased. The analysis by eco-belt shows in some eco-belts the enrolment has increased in a specific grade whereas in some eco-belts it has decreased at the end of the academic year in 2006. The increasing and decreasing in enrolment present the higher and lower retention of students within an academic year (See Annex X).

**Graph 3.4 Percentage change in the enrolment from beginning of the academic year to end of the academic year- 2006**

### 3.4.3 Enrolment at primary level by types of school

The table 3.6 shows the share of students at primary level by types of schools in 2003-07. The share of enrolment at primary level in community schools was 89.2% in 2003 and reached 89.8% in 2007. The enrolment share in institutional schools has been seen fluctuated in the period of 2003-07. The share of enrolment by sex at primary level is quite different in the types of schools. It shows more girls are enrolled in community schools whereas more boys are enrolled in institutional schools. It indicates the attitude of parents in choosing the institution for their children's education (See Annex: XI and XII).

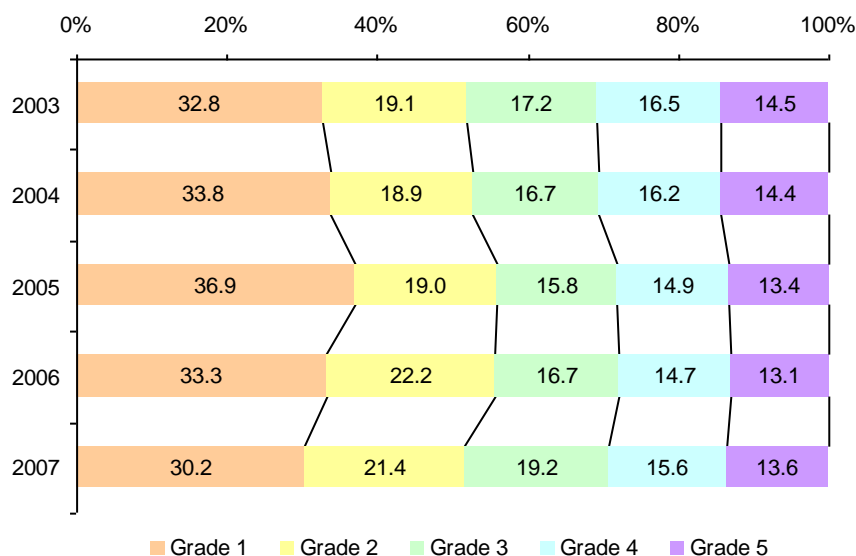

**Table 3.6 Percentage of enrolment by types of school, 2003-2007**

	All types of community schools			Institutional schools		
	Girls	Boys	Total	Girls	Boys	Total
2003	90.0	88.5	89.2	10.0	11.5	10.8
2004	90.3	88.7	89.5	9.7	11.3	10.5
2005	94.7	93.4	94.0	5.3	6.6	6.0
2006	92.4	90.5	91.4	7.6	9.5	8.6
2007	91.1	88.5	89.8	8.9	11.5	10.2

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

The graph 3.5 below presents the share of students by grade in total enrolment in 2003-07. The analysis of the data shows the higher the grade the lower the share of students. Compared to the share of enrolment in grade 5 the share of enrolment in grade 1 is more than double. It shows the share of enrolment in grade 1 is more than 30% whereas the share of enrolment in grade 5 is less than 15% from 2003-07. It indicates that the size of class and volume of student is larger in grade 1 compared to other grades.

**Graph 3.5 Trend of grade wise share of enrolment in total enrolment at primary level**

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

### 3.4.4 Enrolment at primary level by social groups

The table 3.7 present the share of Dalit and Janajati students in total enrolment at primary level in 2003-07. It also presents compared to the others children how the Dalit and Janajati children have been participated in education. The share of Dalit in total number students at primary level is fluctuated in the academic year 2005; where as the share of Janajati is in continuously increasing trends in the academic year 2003-07 (See Annex: XIII & XIV).

**Table 3.7 share of Dalit and Janajati student in total enrolment at primary level**

Year	Dalit			Janajati		
	Boys	Total	Girls	Boys	Total	Girls
2003	14.5	15.5	15.0	NA	NA	NA
2004	14.2	14.8	14.6	24.4	23.0	23.6
2005	15.7	26.8	21.5	36.4	34.9	35.6
2006	16.9	16.9	16.9	37.1	35.7	36.4
2007	19.1	19.3	19.2	41.5	40.4	40.9

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

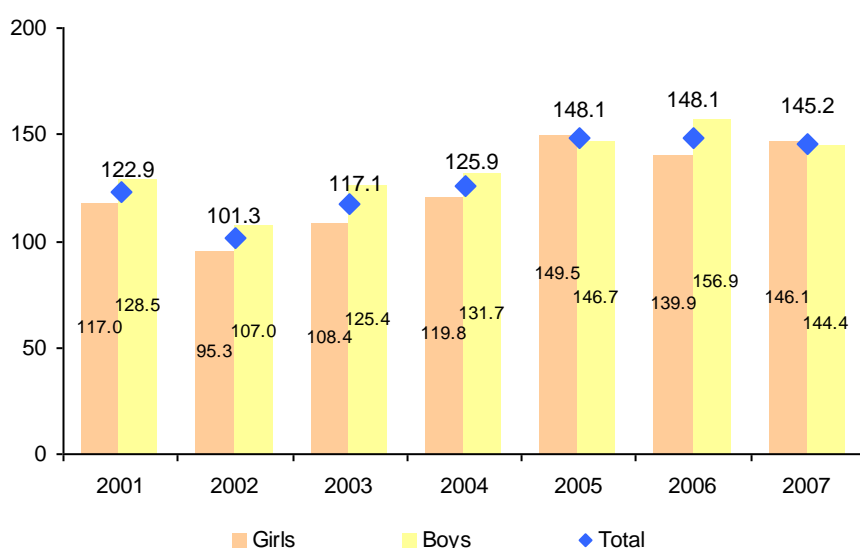

### 3.4.5 Gross Intake Rate (GIR) in grade 1

By definition GIR indicates the total number of new entrants in grade one, regardless of age, expressed as a percentage of the population of five year age. GIR also indicates the general level of access to primary education. More over, it indicates the capacity of the education system to provide

access to grade 1 for the population of five-year age (the official school-entrance age population). This indicator can be used as a substitute to Net Intake Rate (NIR) in the absence of data on new entrants by single years of age. A high Gross Intake Rate indicates a high degree of access in the entrance of primary education.

The graph 3.6 shows the trends of GIR in grade 1 from 2001 to 2007. The GIR is an indicator that shows the enrolment pattern of students in grade 1 compared to the prescribed age group population (i.e.5 year age group children). The analysis shows that the trend of GIR fluctuated during the period 2001-07. It indicates there was 122.9% GIR in 2001, which was reduced to 101.3% in 2002 then gradually increased to 117.1% in 2003. With the implementation of the EFA (2004-09) programme the GIR has drastically increased and reached to 148% in 2006 then it decreased to 145% in 2007. Although the government has set a target to reduce the GIR to 110% by 2009 but it remains to 145% in 2007. The GIR trend in grade 1 suggests more under and over aged children is enrolled in grade 1 in 2005-07 (See Annex: XV).

**Graph 3.6 GIR trend in grade 1 by sex, 2001 – 2007**

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

### 3.4.6 Gross Enrolment Rate (GER) and Net Enrolment Rate (NER) by level

By definition GER shows the total enrolment in a specific level of education, regardless of age, expressed as a percentage of the eligible official school-age population corresponding to the same level of education in a given school-year. GER is widely used to show the general level of participation in a given level of education. It indicates the capacity of the education system to cover the overall enrolled students of a particular level of education irrespective age-group. It is used as a substitute indicator to net enrolment ratio (NER) when data on enrolment by single years of age are not available. Furthermore, it can also be a complementary indicator to NER by indicating the extent of over-aged and under-aged enrolment. This indicator shows the overall coverage of an educational system in relation to the population eligible for participation in the system. This ratio is useful for those who are interested in the overall participation of the school-age population. A high GER generally indicates a high degree of participation, whether the pupils belong to the official age-group or not.

Compared to the GER the indicator NER is often considered as a refined indicator. It considers the age of the students and shows the proportion of school aged children enrolled in school. In addition, it gives a precise indication of the age specific children who are out of

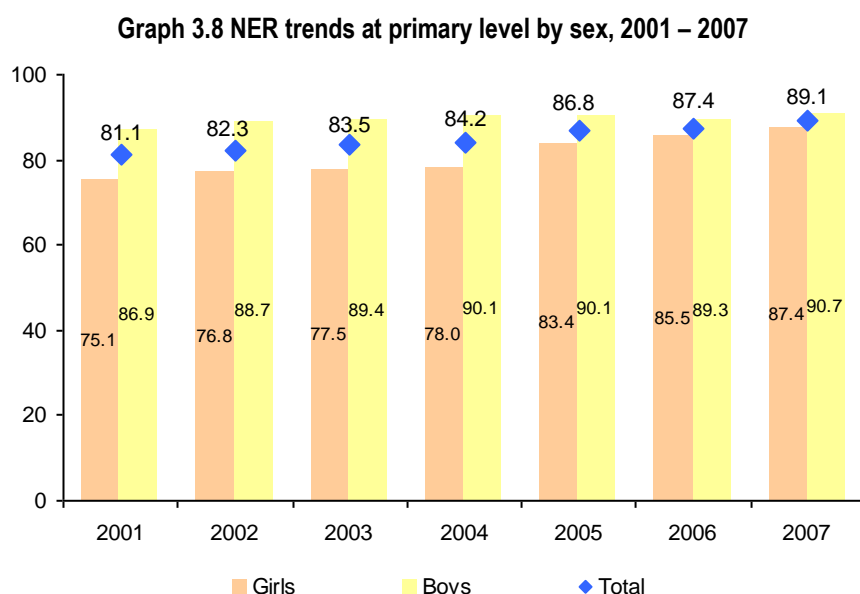

formal schooling system. A high NER denotes a high degree of participation of the official school-age population.

### a) Gross Enrolment Rate (GER) at primary level

The following Graph 3.7 shows the trends of GER at primary level, which describes the overall capacity and the total number of students at primary level compared to the respective age groups population (i.e. 5-9 years population for primary level) in the primary education system. The EFA has targeted 104 GER for 2009 but it has remained 138.5% in 2007. The graph reveals that the GER at primary level has fluctuated over the academic year 2001-2007 (See Annex: XVI).

### b) Net Enrolment Rate (NER) at primary level

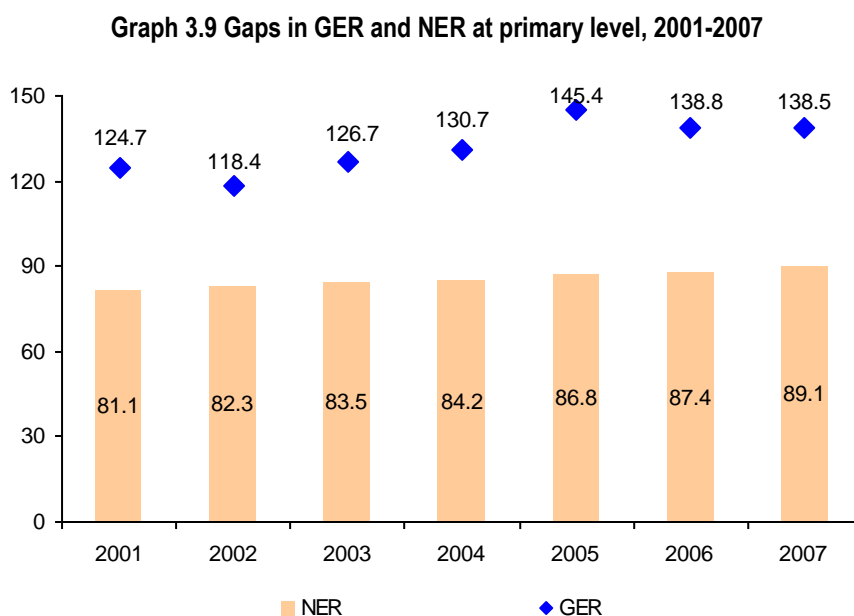

The graph 3.8 above shows the NER trends in primary education from 2001 to 2007. It indicates that the enrolment of the prescribed age group children seems to have increased

continuously. Over all, in 2001 there were 81.1% of the 5-9 years age group children enrolled in primary schools. This percentage increased to 89.1% in 2007. This indicates, although the progress is slow it is in line with the targets of EFA 2004-09.

The increment in NER shows the enrolment of the prescribed age group children in the primary level is increased from 2001 to 2007. The analysis shows that although the trend of NER in total is increasing, the trend of gap between boys and girls was continued same up to 2004 and it became closer from 2006-07 (See Annex: XVI).

The following graph 3.9 shows the trends of gaps between GER and NER for 2001-2007. The wider gaps between GER and NER are found in the academic year 2005-2007 than in the academic year 2001-04. Although the gap is reduced in 2006-07 than in the academic year 2005, it shows more over aged children have enrolled at primary level than the correct age group children particularly in the academic year 2005-07. The wider gap between two indicators shows the direct impacts in the efficiency of the school education system.

### c) Gender Parity Index (GPI) in GER and NER at primary level

GPI<sup>5</sup> is the ratio of the female to the male. A value of less than one indicates a difference in favour of male; a value above one indicates a difference in favour of female; a value between 0.97 and 1.03 indicates the parity in the participation of male and female in education system.

The following table 3.8 shows the trend of Gender Parity Index (GPI) in Gross Enrolment Rate (GER) and Net Enrolment Rate (NER) at primary level. By definition, the GPI in GER explains the status of total participation in education whereas the GPI in NER explains the age specific participation in education with the gender perspectives.

The analysis of GPI in GER shows there was 0.86 GPI in 2001 and that remained the same up to 2003. Similarly, it started to increase from 2004 by 0.91 and reached to 1.01 in 2007. It

<sup>5</sup> The GPI in NER and GER at primary level is calculated by taking the NER/GER for girls and divided by the NER/GER of boys to assess gender parity in enrolment.

indicates that the participation of girls against boys in primary education is getting better in each year and has almost reached equality.

Similarly, table 3.8 presents the GPI in NER in 2001 was 0.86 and it increased to 0.87 in 2002 and this rate continued up to 2004. It shows; with the implementation of EFA programme in 2004, the girls' participation of specific age groups student was significantly increased and the GPI in NER reached 0.93 in 2005 and 0.96 in 2006 and 2007. The analysis of the GPI in GER and NER at primary level shows, although the overall participation of girls is almost satisfactory, there are variations among and within the districts (Annex XIX).

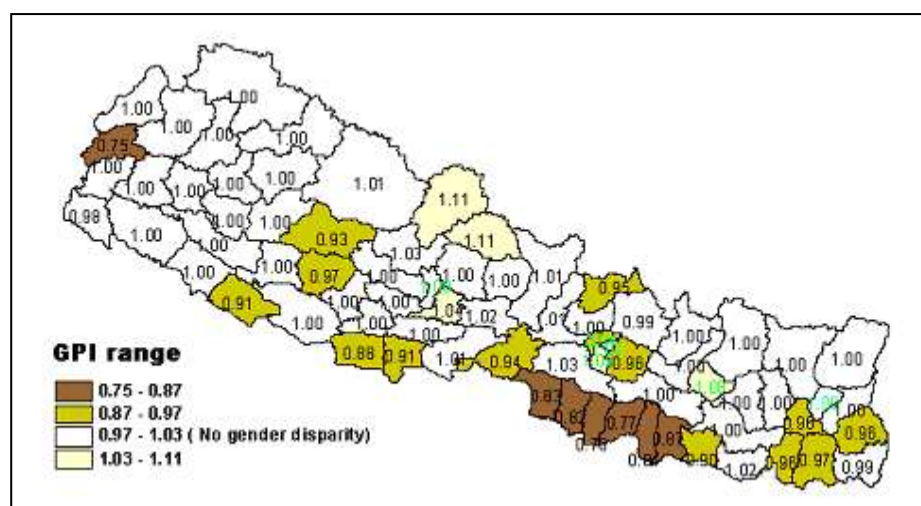

**Table 3.8 GPI Trend in GER and NER at primary level, 2001-2007**

GPI	2001	2002	2003	2004	2005	2006	2007
In GER	0.86	0.86	0.86	0.91	0.95	0.99	1.01
In NER	0.86	0.87	0.87	0.87	0.93	0.96	0.96

Source: School Level Educational Statistics of Nepal, 2001-2003 and Flash I Reports 2004-07

The map 3.3 below indicates the Gender Parity Index in NER at primary level in 2006 by district. In 2006, the average NER at primary level was 0.96. Out of 75 districts 6 districts from central Terai: Parsa, Bara, Rautahat, Sarlahi, Mahottari, and Dhanusha as well as a district from far-west hill, Baitadi have a GPI below 0.87 which indicates a gender differences in favour of boys. Similarly, there are 51 districts with a GPI range between 0.97 and 1.03 (Annex XVII).

**Map 3.3 Gender Parity Index (GPI) in NER at primary level, 2006**

### 3.5 Lower secondary level enrolment

The lower secondary education system in the country consists of the three grades, 6-8. The share of enrolment at lower secondary level of the total enrolment in Flash I, 2007 is 22.1%. The promotion rate in grade 5 is 82.0% which resulted in pressures at lower secondary enrolment along with a ratio of 1:3 (i.e. one lower secondary level equal to 3 primary levels).

The table 3.9 and graph 3.10 show the enrolment trends at lower secondary level in 2003-07. Compared to the total enrolment of 1,210,059 in 2003 the enrolment reached 1,443,515 in 2007 with a 4.5% annual average growth rate. The total share of girls' enrolment at lower

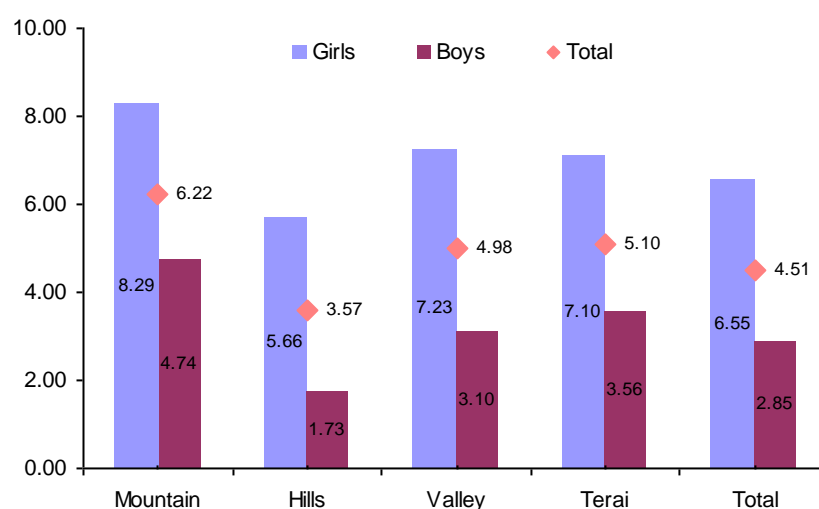

secondary level is 47.1% in 2007. Among the four eco-belts the highest share of girls' enrolment is in Hilly belt and the lowest is in Mountain belt. The average annual growth rate in enrolment at lower secondary level is 4.5 % from 2003 to 2007. The highest increment has observed in Mountain belt whereas the lowest increment is observed in Hills belt. The increment in enrolment at lower secondary level is mainly attributed to the policy of providing a 100 percent salary to teachers appointed in approved positions and the provision of scholarships for Dalit and girls students (CERID, 2005b) (See Annex XX).

**Table 3.9 Enrolment trends at lower secondary level by eco-belt, 2003–2007**

Eco-belt	2003		2004		2005		2006		2007	
	Girls	Total	Girls	Total	Girls	Total	Girls	Total	Girls	Total
Mountain	30,286	74,680	47,132	112,612	39,354	91,826	36,509	84,884	41,650	95,076
Hills	236,094	520,450	325,974	696,343	286,258	606,060	269,909	557,749	294,310	598,875
Valley	52,544	118,945	50,525	104,235	59,234	123,566	49,820	101,528	69,456	144,489
Terai	208,764	495,984	229,527	531,807	243,877	553,344	250,359	556,973	274,657	605,076
Total	527,688	1,210,059	653,159	1,444,997	628,723	1,374,796	606,597	1,301,134	680,072	1,443,515

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

**Graph 3.10 Average annual growth at lower secondary level (2003-2007)**

### 3.5.1 Enrolment at lower secondary level by types of school

The table 3.10 below shows the share of students at lower secondary level by types of schools in 2003-07. The share of enrolment at lower secondary level in community schools was 86.7% in 2003 and reached 87.0% in 2007. The enrolment share in institutional schools has been seen fluctuated in the period of 2003-07. The share of enrolment by sex at lower secondary level is quite different in the types of schools. It shows the share of girls in community schools is higher than the boys whereas it is just opposite situation in the institutional schools. It indicates the attitude of parents in choosing the institution for their children's education (See Annex: XXI and XXII).

**Table 3.10 Percentage of enrolment by types of school, 2003-2007**

	All types of community schools			Institutional schools		
	Girls	Boys	Total	Girls	Boys	Total
2003	88.3	85.6	86.7	11.7	14.4	13.3
2004	90.6	89.0	89.7	9.4	11.0	10.3
2005	93.1	91.7	92.4	6.9	8.3	7.6
2006	88.4	86.2	87.2	11.6	13.8	12.8
2007	88.3	85.8	87.0	11.7	14.2	13.0

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

### 3.5.2 Share of enrolment at lower secondary level by social groups

The following table 3.11 presents the trends of Dalit and Janajati enrolment share at lower secondary level in 2003-07. The total share of Dalit students in total enrolment at lower secondary level is 8.6%, 6.8%, 7.8%, 9.5% and 9.8% in the academic years 2003, 2004, 2005, 2006 and 2007 respectively. It indicates that the share of Dalit enrolment is decreased in 2004 and increased to 9.8% in 2007. With the increment of the total share of Dalit enrolment the share of girls' enrolment also gradually increased in the academic years 2005-07 (See Annex: XXIII).

The table 3.11 below also shows the trends of Janajati students' share in total enrolment at lower secondary level in 2004-07<sup>6</sup>. The total share of Janajati students in total enrolment at lower secondary level is 28.9%, 35.2%, 38.6% and 40.3% in the academic years 2004, 2005, 2006 and 2007 respectively. It indicates that the share of Janajati is increased from 2004-07 both in the total and girls' enrolment (See Annex: XXIV).

**Table 3.11 share of Dalit and Janajati enrolment at lower secondary**

Year	Dalit			Janajati		
	Girls	Boys	Total	Girls	Boys	Total
2003	7.0	9.9	8.6	0.0	0.0	0.0
2004	6.4	7.1	6.8	29.6	28.3	28.9
2005	7.4	8.2	7.8	36.2	34.4	35.2
2006	9.0	9.9	9.5	39.6	37.7	38.6
2007	9.4	10.2	9.8	41.6	39.0	40.3

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

### 2.5.3 GER at lower secondary level

Graph 3.11 below shows the trends of GER at lower secondary level in 2001-2007. Over all the trends of GER at lower secondary level is fluctuated in the academic year 2001-07. It indicates the GER 63.2% in 2001 decreased up to 2003 and then increased by 80.3% in 2004 but this rate again declined in 2005 and 2006. After that the rate again increased by 78.8% in 2007. The similar trend was found both for girls' and boys' GER (See Annex: XVII).

<sup>6</sup> The enrolment of Janajati for 2003 was not collected and covered in the system.

**Graph 3.11 GER trends at lower secondary level by sex, 2001-2007**

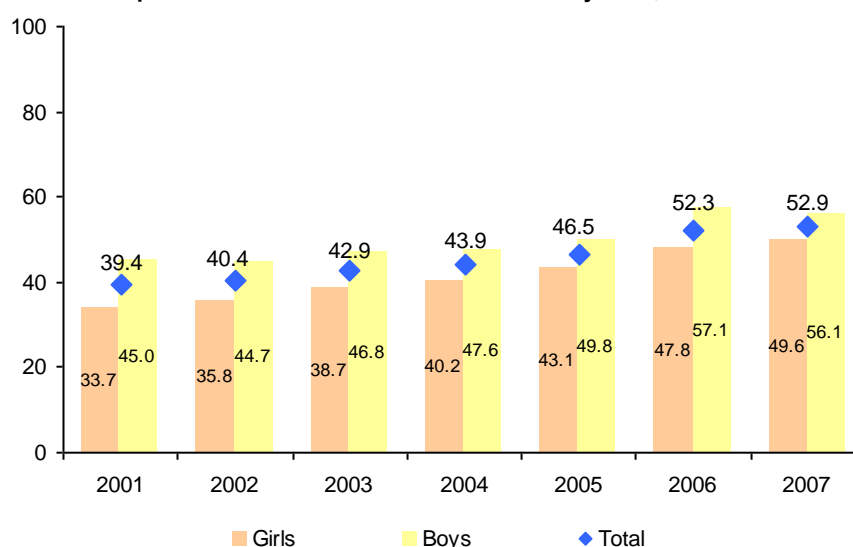

Source: School Level Educational Statistics of Nepal, 2001-2003 and Flash I Reports 2004-07

### 3.5.4 NER at lower secondary level

The graph 3.12 shows the trends of NER at lower secondary level in 2001-2007. The NER trend at lower secondary level from 2001 to 2007 indicates that the participation of specific age group student seems to be increasing. The NER from 39.9% in 2001 to 52.9 in 2007 shows a significant improvement in the net enrolment at lower secondary level. There is a big gap in the boys and girls' NER in all academic years. However, the increasing trend of NER for girls shows the participation of correct age group girls' student is increased from 33.7% to 49.6% at lower secondary level (See Annex: XVII).

**Graph 3.12 Trends of NER at lower secondary level, 2001 – 07**

Source: School Level Educational Statistics of Nepal, 2001-2003 and Flash I Reports 2004-07

### 3.5.5 Gender Parity Index in GER and NER at lower secondary level

The following table 3.12 shows the trends of Gender Parity Index (GPI) in Gross Enrolment Rate (GER) and Net Enrolment Rate (NER) at lower secondary level in 2003-2007. The analysis shows on average there was 0.83 GPI both in GER and NER in 2003 which reached

at 0.93 for GER and 0.88 for NER in 2007. The increasing trends of GPI in GER and NER indicate that the participation of girls against boys has been increased (See Annex XIX).

**Table 3.12 GPI Trend in GER and NER at lower secondary level, 2003-2007**

GPI	2003	2004	2005	2006	2007
In GER	0.83	0.85	0.81	0.84	0.93
In NER	0.83	0.84	0.87	0.84	0.88

The map 3.4 below shows the lower secondary level GPI in GER in 2006. It indicates the average GPI in GER at the national level is 0.84 and out of 75 districts 9 districts have achieved the parity in gross enrolment at lower secondary level. Most of the districts have less than 0.97 GPI in GER, which indicates a gender differences in favour of boys. Large disparities (less than 0.50% GPI) are found in mid and far western mountain districts ( Mugu, Humula, Bajhang, Jumla, Bajula, Kalikot, Achham), and in the Terai district ( Parsa) (Annex XVII).

**Map 3.4 Gender Parity Index (GPI) at lower secondary level (GER), 2006**

### 3.6 Secondary level enrolment

Out of total enrolment at all levels of education the share of enrolment in secondary level is 10.3% in 2007. In 2007 the promotion rate from grade 8 to 9 is 84.3% which resulted in increment of enrolment at secondary level.

The table 3.13 and the graph 3.13 below show the enrolment trends at secondary level in 2003-07. With the 7.0% annual average growth rate, the total enrolment of 511,092 in 2003 reached 671,183 in 2007. It indicates the trend of girls' enrolment has been significantly increased in the period of 2003-2007. The total share of girls' enrolment at secondary level also increased from 43.8 to 46.0% in 2003-2007. Among the four eco-belts the highest share of girls' enrolment is in Valley belt and the lowest is in Mountain belt (See Annex: XX).

**Table 3.13 Trends of enrolment at secondary level by eco-belt, 2003–2007**

Eco-belt	2003		2004		2005		2006		2007	
	Girls	Total	Girls	Total	Girls	Total	Girls	Total	Girls	Total
Mountain	11,151	28,555	15,712	38,530	15,054	33,988	20,363	45,789	17,050	40,679
Hills	93,407	209,869	123,405	271,622	111,625	238,667	144,057	300,287	125,990	266,020
Valley	27,789	58,268	26,524	54,551	33,997	69,477	27,981	56,324	38,752	79,397
Terai	92,592	214,400	94,831	222,862	107,633	245,046	120,815	276,987	127,048	285,087
Total	223,939	511,092	260,472	587,566	268,310	587,177	313,216	679,387	308,839	671,183

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

**Graph 3.13 Average annual growth rates at secondary level (2003-2007)**

### 3.6.1 Enrolment at secondary level by types of school

The table 3.14 shows the share of students at secondary level by types of schools in 2003-07. The share of enrolment at secondary level in community schools was 84.6% in 2003 and reached 85.1% in 2007. The enrolment share in institutional schools has been seen fluctuated in the period of 2003-07. The share of enrolment by sex at secondary level is quite different in the types of schools. It shows the share of girls in community schools is higher than the boys whereas it is just opposite situation in the institutional schools. It indicates the attitude of parents in choosing the institution for their children's education (See Annex: XXI and XXII).

**Table 3.14 Percentage of enrolment by types of school, 2003-2007**

	All types of community schools			Institutional schools		
	Girls	Boys	Total	Girls	Boys	Total
2003	85.7	83.8	84.6	14.3	16.2	15.4
2004	87.6	85.9	86.7	12.4	14.1	13.3
2005	91.1	89.6	90.3	8.9	10.4	9.7
2006	88.0	86.1	87.0	12.0	13.9	13.0
2007	86.4	84.0	85.1	13.6	16.0	14.9

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

### 3.6.2 Share of enrolment at secondary level by social groups

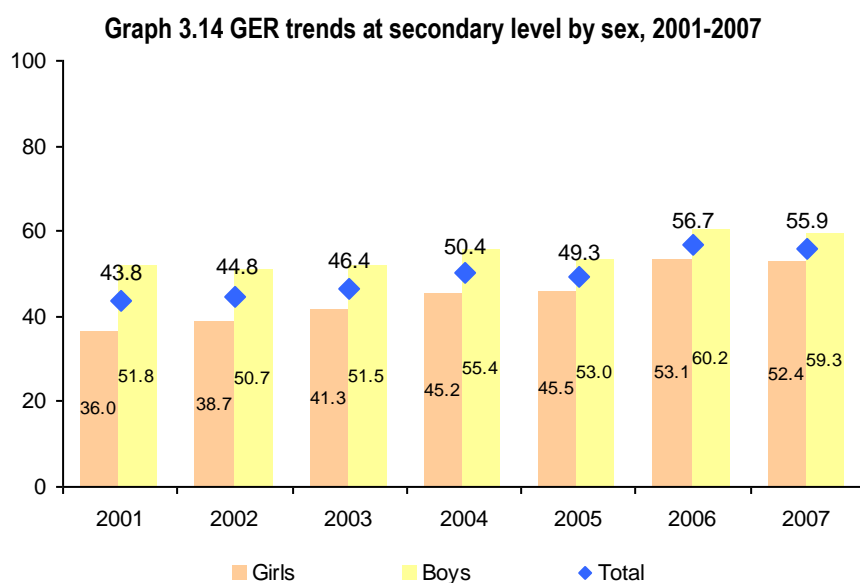

The following table 3.15 presents the trends of Dalit and Janajati enrolment share at secondary level in 2003-07. The total share of Dalit students in total enrolment at secondary level is 5.6%, 8.1%, 5.1%, 5.3% and 6.4% in the academic years 2003, 2004, 2005, 2006 and 2007 respectively. It indicates that the share of Dalit enrolment is decreased in 2005 and increased to 6.4% in 2007. With the increment of the total share of Dalit enrolment the share of girls' enrolment also gradually increased in the academic years 2006-07 (See Annex: XXIII). The table 3.15 below also shows the trends of Janajati students' share in total enrolment at secondary level in 2004-07<sup>7</sup>. The total share of Janajati students in total enrolment at secondary level is 30.2%, 31.8%, 29.9% and 37.0% in the academic years 2004, 2005, 2006 and 2007 respectively. It indicates that the share of Janajati is fluctuated in 2005 and 2006 (See Annex: XXIV).

**Table 3.15 Trends of Dalit and Janajati enrolment at secondary**

Year	Dalit			Janajati		
	Girls	Boys	Total	Girls	Boys	Total
2003	4.9	6.0	5.6	0.0	0.0	0.0
2004	7.9	8.3	8.1	31.3	29.4	30.2
2005	4.5	5.6	5.1	32.1	31.6	31.8
2006	4.8	5.7	5.3	30.6	29.4	29.9
2007	5.9	6.9	6.4	38.4	35.8	37.0

### 3.6.3 GER at secondary level

The following graph 3.14 shows the trends of GER at secondary level in 2001-2007. Over all the trends of GER at secondary level is in increasing pattern. It indicates the GER 43.8% in 2001 increased up to 2004 and slightly decreased by 49.3% in 2005 but this rate again increased in 2006-07. The trend of girls' GER is increasing but for boys' it is fluctuated over the consecutive years (See Annex: XVIII).

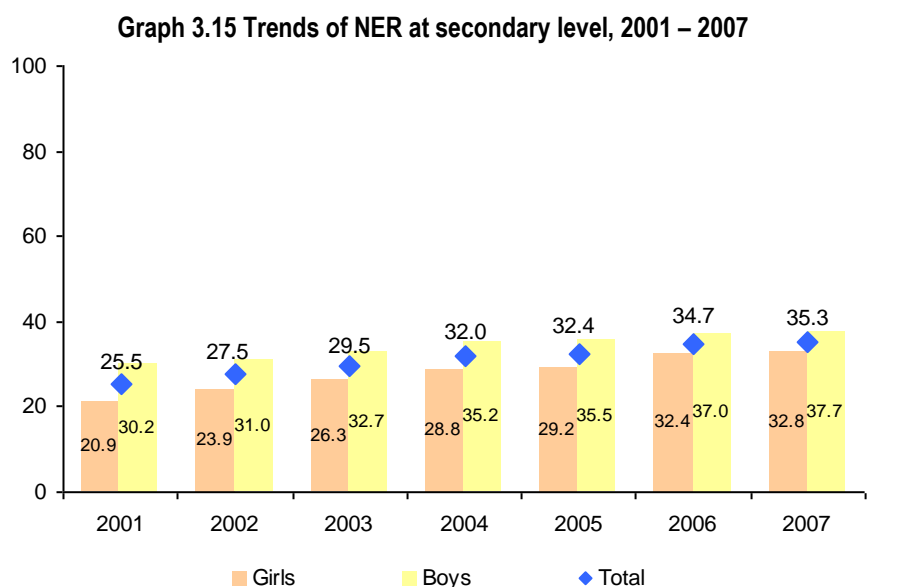

Source: School Level Educational Statistics of Nepal, 2001-03 and Flash I Reports 2004-07

<sup>7</sup> The enrolment of Janajati for 2003 was not collected and covered in the system.

### 3.6.4 NER at secondary level

The graph 3.15 below shows the trends of NER at secondary level in 2001-2007. The NER trend at secondary level from 2001 to 2007 indicates that the participation of specific age group student seems to be increasing. The NER from 25.5% in 2001 to 35.3 in 2007 shows a significant improvement in the net enrolment at secondary level. There is a big gap in the boys and girls' NER in all academic years. However, the increasing trend of NER for girls shows the participation of correct age group girls' student is increased from 20.9% to 32.8% at secondary level (See Annex: XVIII).

### 3.6.5 Gender Parity Index in GER and NER at secondary level

The following table 3.16 shows the trends of Gender Parity Index (GPI) in Gross Enrolment Rate (GER) and Net Enrolment Rate (NER) at secondary level in 2003-2007. The analysis shows on average there was 0.80 GPI both in GER and NER in 2003 which reached at 0.88 for GER and 0.87 for NER in 2007. The increasing trends of GPI in GER and NER indicate that the participation of girls against boys has been increased (See Annex XIX).

**Table 3.16 GPI Trend in GER and NER at lower secondary level, 2003-2007**

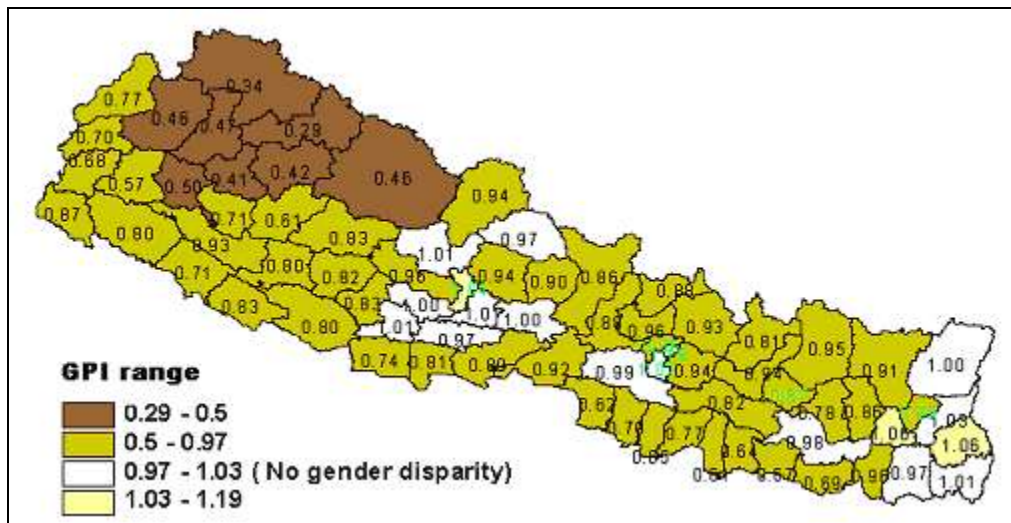

GPI	2003	2004	2005	2006	2007
In GER	0.80	0.82	0.86	0.88	0.88
In NER	0.80	0.82	0.82	0.88	0.87

Similarly, the map 3.5 below shows the GPI in GER at Secondary level in 2006. The GPI for GER at the national average is 0.88 and there are 39 districts where the GPI is below the national average. Out of those districts, there are 7 districts with GPI below 0.50. The low GPI in GER at the secondary level is found mostly in western Hilly districts.

On the other hand, out of 75 districts 4 districts (Parbat, Dhankuta, Ilam and Bhaktapur) have achieved more than 1.03 GPI in GER at secondary level. This indicates a gender difference in

favour of girls. It shows there are 14 districts with a GPI range between 0.97 and 1.03. Similarly, large disparities are found in mid and far western Hilly and Mountain districts (Annex XIX).

Map 3.5 Gender Parity Index (GPI) at secondary level (GER), 2006

## Chapter IV

### INTERNAL EFFICIENCY

#### 4.1 Background

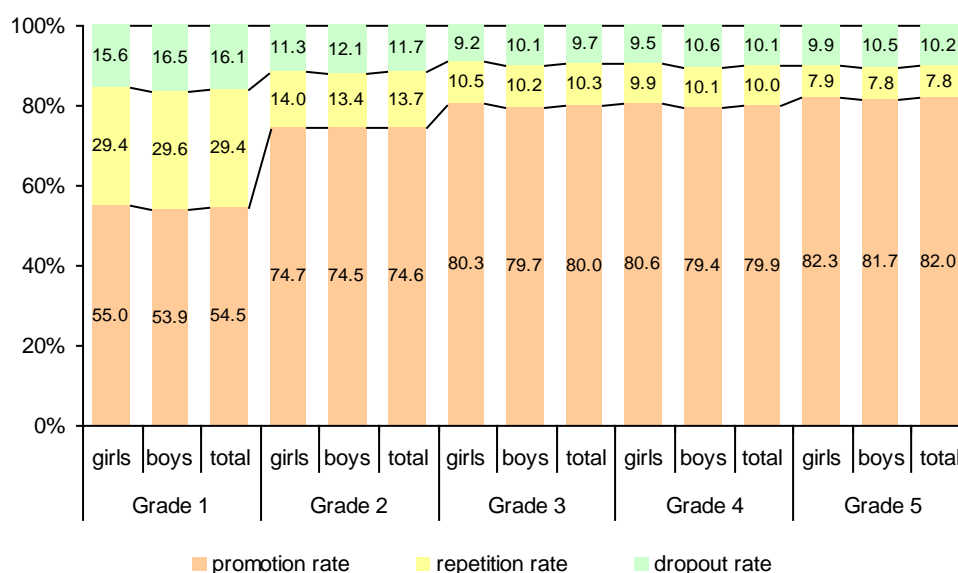

Internal efficiency relates to the use of resources, and refers to the internal dynamics of the educational system in transforming inputs and processes into outputs (entrants into graduates). The EFA programme has emphasised to increasing the efficiency of the education system.

#### 4.2 Internal Efficiency at primary level

The following graph 4.1 explains the percentage of promoters, repeaters, and dropouts at primary level in 2007. The highest repetition rate is found in grade 1, which shows still the most serious problem exists in grade 1. It indicates the underage children are enrolled in grade 1 due to the lack of pre-preparation of children for schooling and also the absence of ECD/PPC classes. It shows the higher the grade the lower the repetition rate at primary level.

The dropout rate is the percentage of students enrolled in a given grade in an academic year who are not enrolled in any grade during the following school year. In total the average dropout rate in grade 1 is 16.1% of this 15.6% for girls and 16.5% for boys. Similarly, in total the average dropout rate in grade 5 is 10.2% of this 9.9% for girls and 10.5% for boys. Over all the internal efficiency at primary level shows the lowest promotion rates and the highest repetition and dropout rates are prominent in grade 1. This indicates that the government including school management, stakeholders and local government agencies need to pay proper attention to reducing the repetition and dropout of the children at primary level (See Annex: XXV\_A to XXV\_C).

**Graph 4.1 Internal Efficiency at primary level by grade, 2007**

Source: Flash I Reports 2007

The following graph 4.2 explains the distribution of repetition rate and dropout rate at grade 1 by district in 2007. This graph shows there are 14 districts (Solukhumbu, Sarlahi, Dolakha, Sindhupalchok, Rautahat, Manang, Myagdi, Parbat, Baglung, Rolpa, Rukum, Surkhet, Jajarkot, Dolpa) those have high repetition and dropout rates while, there are 17 districts (Ilam, Dhankuta, Khotang, Udayapur, Saptari, Kavrepalanchok, Kathmandu, Rasuwa, Makwanpur, Chitawan, Syangja, Kaski, Mustang, Kapilbastu, Banke, Mugu, Kailali) those have low repetition and dropout rates than the national average (See Annex: XXV\_A to XXV\_C).

**Graph 4.2 Internal Efficiency at grade 1 by District, 2007**

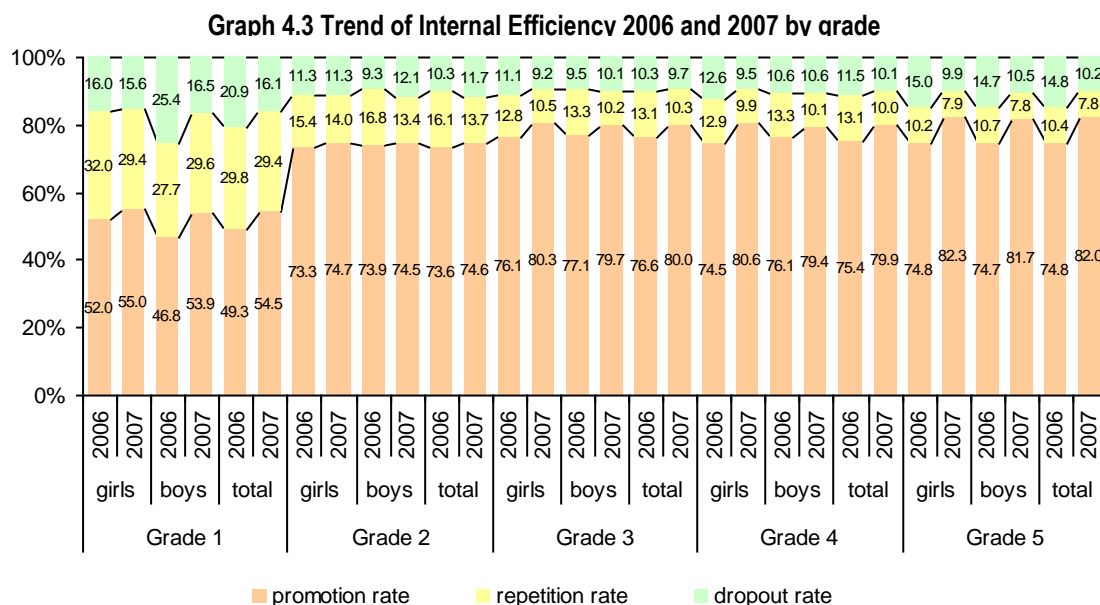

### 4.3 Trend of Internal Efficiency at primary level

Promotion rate shows the efficiency and quality of the education system. It is the percentage of students promoted to the next grade in the following school year. The following graph 4.3 depicts the comparison of promotion rate in 2006 and 2007. It shows compared to the promotion rate in 2006 the promotion rate in all grade is slightly increased in 2007. The promotion rate by grade reveals that higher the grade the higher the promotion rate. The lowest promotion rate is found in grade 1 which indicates about half of the students in grade 1 are either repeating or dropping out from the system.

Also the graph shows the comparative trends of repetition and dropout rates at primary level by grade. Over all it indicates the decreasing trends of repetition rate in all grades at primary level. High repetition rate is an indication of wastages in education. Although, the repetition rate is decreasing from 2006 to 2007 still the highest repetition rate is prominent in grade 1. Similarly, over the entire dropout rate in 2007 is lower than in 2006. An increasing dropout trend indicates issues of quality and wastage in education. The highest dropout rate is found in Grade 1 (Annex: XXV\_A-C & XXVI\_A-C).

This trend of internal efficiency at primary level indicates that government needs to pay proper attention to reduce the dropout especially in lower grades of primary education.

#### 4.4 Survival Rate to grade 5<sup>8</sup>

The survival rate to grade 5 indicates the proportion of children enrolled in grade 1 who eventually reach to grade 5. The following table 4.1 shows the trend of survival rate to grade 5 in 2003-07. Overall the trend is increased, but the rate for girls is fluctuating in 2004 and 2005. On average the survival rate to grade 5 in 2007 was 81.1% of this 78.6% for girls and 83.4% for boys. If this trend of survival rate to grade 5 would be keeping up the EFA targets of 85% for 2009 and 90% for 2015 could be achieved.

A high student survival rate to grade 5 depicts the education system is more efficient and capable to make retain the students from lower grades in the system with minimum wastage. The analysis shows still some of the districts in Terai belt (such as Sarlahi, Bara, Rautahat, Dhanusha, Mahottari, Parsa, Kapilbastu, Siraha, Saptari) have the low percentage of survival rate to grade 5, that suggests the government need to pay special attention to these districts.

**Table 4.1 Trend on Survival Rate to grade 5 by sex, 2003 - 2007**

Student	2003	2004	2005	2006	2007
Girls	60.2	80.6	75.9	77.4	78.6
Boys	59.3	72.4	82.1	83.0	83.4
Total	59.7	76.2	79.1	80.3	81.1

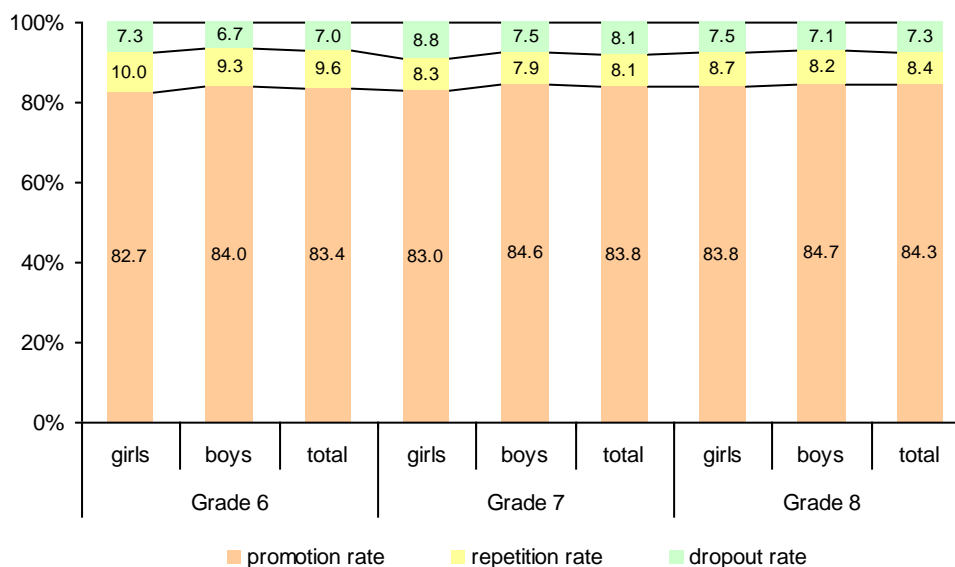

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

<sup>8</sup> The survival rate for 2006 was calculated by using the proxy formula. The result will be quite different if the reconstructed cohort model was used. If the survival rate was calculated by using the reconstructive cohort model the survival rate would be 47.0% for the primary level and 44.9% for boys and 49.5% for girls. The discrepancy between the rates when calculating the survival rate using these two internationally used approaches shows that the results depend on the chosen approach.

#### 4.5 Internal Efficiency at lower secondary level

The following bar graph 4.4 shows the grade wise promotion rates at lower secondary level in 2007. The average promotion rate for grade 6, 7 and 8 is 83.4%, 83.8% and 84.3% respectively. Compared with the girls' promotion rates, the boys' promotion rate is slightly higher in all grades. Similarly, the repetition rate is higher in grade 6 than in grades 7 and 8. Likewise, the dropout rate in grade 7 is slightly higher than in the grades 6 and 8 (See Annex XXVII\_A-C).

**Graph 4.4 Internal Efficiency at lower secondary level, 2007**

Source: School Level Educational Statistics of Nepal, 2001-03 and Flash I Reports 2004-07

#### 4.6 Trend of Internal Efficiency at lower secondary level

**Graph 4.5 Internal Efficiency at lower secondary level, 2006 and 2007**

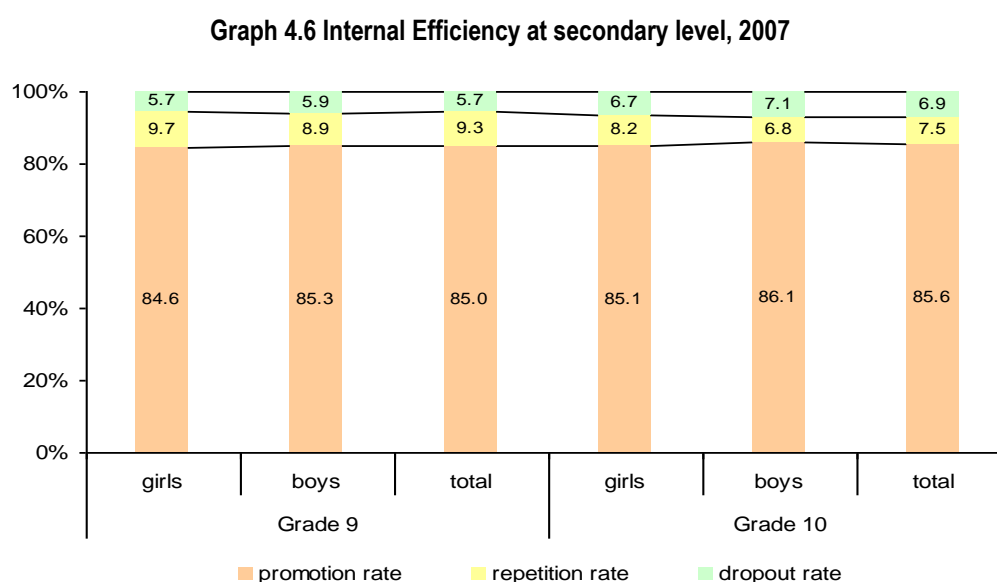

The graph 4.5 above shows the comparison of promotion, repetition and dropout rates at lower secondary level in 2006 and 2007 by grade. Compared with the promotion rate in 2006

it has increased in all grades in 2007. While the repetition and dropout rates in 2007 have slightly decreased in all grades. The decreasing trend of repetition and dropout rates at lower secondary level is an indication of better efficiency of the system and lower wastage of the resources (See Annex: XXVII\_A-C and XXVIII\_A-C).

#### 4.7 Internal Efficiency at secondary level

The following bar graph 4.6 shows the grade wise promotion rates at secondary level in 2007. The average promotion rates for grade 9 and grade 10 are 85.0% and 85.6% respectively in 2007. Compared with the girls' promotion rates, the boys' promotion rate is slightly higher (See Annex: XXVII\_A\_C).

Source: School Level Educational Statistics of Nepal, 2001-03 and Flash I Reports 2004-07

The following table 4.2 shows the comparison of promotion rate at secondary level in 2003, 2006 and 2007. The table explains the incremental changes in promotion rate at secondary level. In total the promotion rate has reached 85.0% in 2007 from 76.9% in 2003. There are not significant differences between girls' and boys' promotion rate in the all academic year (See Annex: XXVII\_A-C & XXVIII\_A-C).

**Table 4.2 Promotion rate in grade 9, 2003, 2006 and 2007**

Year	Promotion rate in Grade 9		
	Girls	Boys	Total
2003	76.8	76.9	76.9
2006	84.3	84.9	84.7
2007	84.6	85.3	85.0

Source: School level Educational statistics of Total 2003 and Flash I Report 2007

The following table 4.3 shows the repetition rates at secondary level by grade in 2003, 2006 and 2007. Overall, the trend of repetition rate has decreased in both grades 9 and 10 from 2003 to 2007. It also indicates that the wastage in secondary education has been getting lower and lower within the academic year 2003-07 (See Annex: XXVII\_A-C & XXVIII\_A-C).

**Table 4.3 Repetition rate at secondary level by grade, 2003, 2006 & 2007**

Year	Grade 9			Grade 10		
	Girls	Boys	Total	Girls	Boys	Total
2003	17.0	15.2	16.0	19.7	16.6	17.9
2006	10.0	9.1	9.5	8.3	7.0	7.6
2007	9.7	8.9	9.3	8.2	6.8	7.5

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

The following table 4.4 depicts the comparison of dropout rate in grade 9 in 2003, 2006 and 2007. Overall, compared with the dropout rate in 2003, the dropout rate in grade 9 has decreased in 2006 and 2007. Interestingly, girls' dropout rate is lower than boys in all academic years (See Annex: XXVII\_A-C & XXVIII\_A-C).

**Table 4.4 Dropout Rate at grade 9, 2003 & 2007**

Year	Girls	Boys	Total
2003	6.2	7.9	7.2
2006	5.6	6.0	5.8
2007	5.7	5.9	5.7

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

#### 4.8 Transition rate to lower secondary and secondary levels

The transition rate is the number of pupils admitted to the first grade of higher level education (e.g. grade 6/ grade 9) in a given year, expressed as a percentage of the number of students enrolled in the final grade of the lower level (e.g. grade 5/ grade 8) of education in the previous year.

**Map 4.1 Transition rate to lower secondary level (grade 6), 2006**

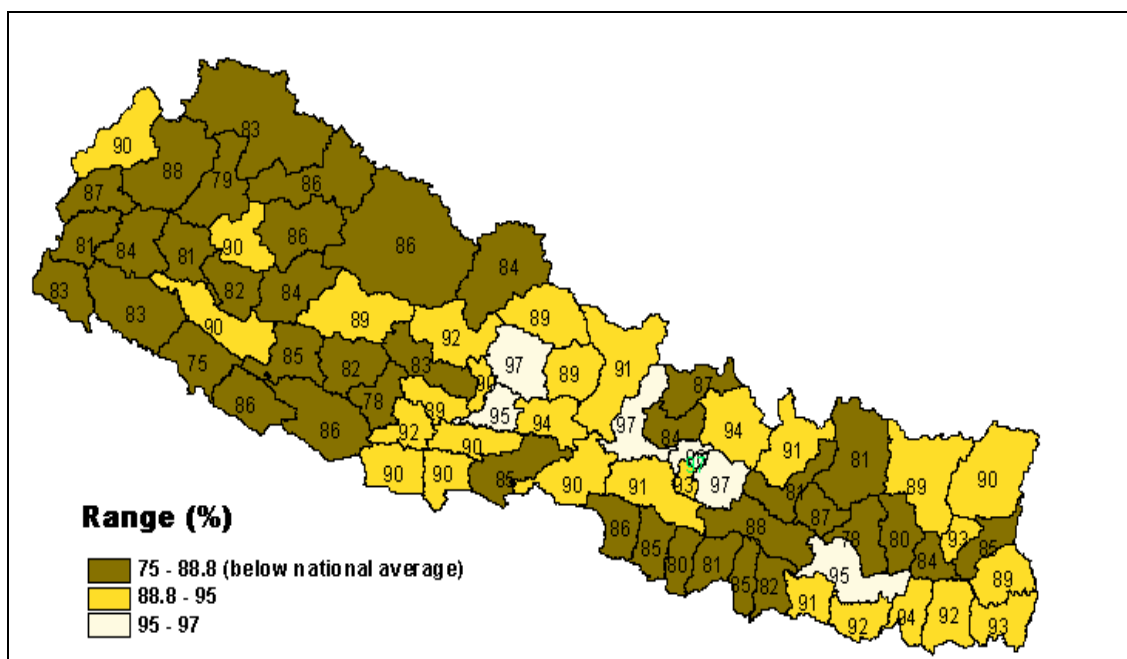

The map 4.1 above and the map 4.2 below present the transition rates to lower secondary and secondary level by district in 2006. In the academic year 2006 the total transition rate to lower

secondary was 81.6% of this 82.3% for girls and 81.1% for boys. Districts with more than 95% of transition rates are Ramechhap, Darchula and Terahthum and the districts with less than 70% are Rukum, Khotang, Parsa, Dhanusha, Sarlahi, and Jajarkot.

Similarly, in the academic year 2006, on average the total transition rate to secondary level was 88.8% of this 87.8% for girls and 89.6% for boys. Out of the 75 districts, 4 districts (Bhaktapur, Dhading, Kaski and Kavrepalanchok) from Hill and Valley belts have been able to achieve more than 95% transition rate whereas the districts Bardiya, Pyuthan, Khotang, Bajura and Rautahat have less than 80% transition rate in 2006 (See Annex XXIX).

In addition to this, in the academic year 2007, on average the total transition rate to lower secondary level is 83.4 of this 84.0% for girls and 82.9% for boys. Likewise on average transition rate to secondary level is 89.5 of this 88.7 for girls' and 90.1 for boys. this indicates compared to the academic year 2006 the rate of transition from lower level to upper level is in increasing trend (See Annex XXIX).

**Map 4.2 Transition rate to secondary level (grade 9), 2006**

## Chapter V

### TEACHER INFORMATION AND RATIOS

#### 5.1 Primary level teacher

The following table 5.1 shows the distribution of teachers at primary level by school types and eco-belts in 2007. At the primary level in total 116,846 teachers were reported in Flash I 2007 from all types of schools. Out of the total number of teachers the share of female teacher was 35.5 %. Compared with the total share at national level, the highest share of female teacher was in the Valley belt which accounts 62.1% whereas the Mountains belt has the lowest share of female teachers followed by the Terai and Hills belts.

The share of female teacher in community schools is 30.9% whereas in institutional schools it is 55.9 %. The table below indicates that most of the community schools except Valley have less than 50 % share of female teachers whereas in institutional schools except Mountain and Terai belts have more than 50% female teacher. Hence to achieve the EFA target of 50 % female teachers by 2009, the enforcement of female teacher recruitment policy at primary level need urgent attention (See Annex: XXX).

**Table 5.1 Number and share of female teachers at primary level by school type, 2007**

Eco - Zones	Total Teacher				Community schools' teacher				Institutional schools' teacher			
	Female	Male	Total	% of Girls	Female	Male	Total	% of Girls	Female	Male	Total	% of Girls
Mountain	3,248	9,262	12,510	26.0	3,070	9,009	12,079	25.4	178	253	431	41.3
Hill	18,573	37,051	55,624	33.4	15,446	34,413	49,859	31.0	3,127	2,638	5,765	54.2
Valley	6,509	3,976	10,485	62.1	2,078	1,919	3,997	52.0	4,431	2,057	6,488	68.3
Terai	13,145	25,082	38,227	34.4	8,928	20,591	29,519	30.2	4,217	4,491	8,708	48.4
Total	41,475	75,371	116,846	35.5	29,522	65,932	95,454	30.9	11,953	9,439	21,392	55.9

Source: Flash I Report 2007

The following table 5.2 shows the share of teacher in total number of teachers by types of schools and eco-belts at primary level on the basis of reported number of teacher in Flash I 2007. Out of total number of reported teachers in 2007 the total share of community schools' teacher is 81.7% of this 71.2% and 87.5% is female and male teachers. The share of teacher in institutional schools is 18.3 % of this 28.8% is female and 12.5% is male. This indicates that compare to the share of male teacher the share of female teacher is higher in institutional schools (See Annex: XXX).

**Table 5.2 Share of primary teachers by school type, 2007**

Eco-belt	Total Teacher			% of Community schools' Teacher in total			% of institutional schools' Teacher in total		
	Female	Male	Total	Female	Male	Total	Female	Male	Total
Mountain	3,248	9,262	12,510	94.5	97.3	96.6	5.5	2.7	3.4
Hills	18,573	37,051	55,624	83.2	92.9	89.6	16.8	7.1	10.4
Valley	6,509	3,976	10,485	31.9	48.3	38.1	68.1	51.7	61.9
Terai	13,145	25,082	38,227	67.9	82.1	77.2	32.1	17.9	22.8
Total	41,475	75,371	116,846	71.2	87.5	81.7	28.8	12.5	18.3

Source: Flash I Report 2007

The table 5.3 below shows the share of teacher in teaching profession by social groups and eco-belt at primary level. Compared to the share of Janajati teacher, the share of Dalit and Disabled teacher is considerably low at national as well as in all eco-belts.

The analysis shows, still in the teaching profession the majority of the teachers are found other than the Dalit and Janajati categories. Similarly, out of 41,475 female teachers at primary level in the country 1.2 % is Dalit and 13.9 % is Janajati.

Compared to other eco-belts the highest share of Dalit teachers is in Hill belt and the lowest is in Mountain belt. Likewise, the highest share of Janajati is in Valley belt and the lowest is in the Terai belt. The total share of Disable teacher at primary level is 1.0% of this 0.6% is female and 1.3% is male.

**Table 5.3 Share of primary teachers by social groups, 2007**

Eco-belt	Total Teacher			% of Dalit in total			% of Janajati in total			% of Disable in total		
	Female	Male	Total	Female	Male	Total	Female	Male	Total	Female	Male	Total
Mountain	3,248	9,262	12,510	1.1	2.9	2.4	14.6	15.5	15.2	0.9	1.0	1.0
Hills	18,573	37,051	55,624	1.1	6.1	4.5	14.9	15.2	15.1	0.7	1.4	1.2
Valley	6,509	3,976	10,485	0.4	9.9	4.0	16.4	18.6	17.2	0.4	2.4	1.1
Terai	13,145	25,082	38,227	1.8	4.8	3.7	11.0	16.3	14.5	0.5	1.1	0.9

Source: Flash I Report 2007

## 5.2 Lower secondary level teacher

The table 5.4 below shows the total number of teacher and the share of female teacher at lower secondary level by eco-belt on the basis of reporting in Flash I 2007. Out of 27,903 teachers at lower secondary level 18.6 % are female. The highest share of female teacher is in Valley and the lowest share is in Mountain belt. Compared to the total share of female teacher at the national level the Mountain, Hills and Terai belts have lower share of female teacher at lower secondary level (See Annex: XXXI).

**Table 5.4 Number of lower secondary teachers by eco-belt, 2007**

Eco-belt	Female	Male	Total	Female % in total
Mountain	246	2,255	2,501	9.8
Hills	1,804	10,580	12,384	14.6
Valley	1,633	2,329	3,962	41.2
Terai	1,499	7,557	9,056	16.6
Total	5,182	22,721	27,903	18.6

Source: Flash I Report 2007

The following table 5.5 shows the share of teacher by types of schools in total number of teachers by eco-belts at lower secondary level in 2007. Out of total number of reported teachers in 2007 the total share of community schools' teacher is 73.3% of this 53.9% is

female and 77.7% is male teachers. Similarly, the share of teacher in institutional schools' is 26.7% of this 46.1% is female and 22.3% is male. This indicates that compare to the share of male teacher the share of female teacher is higher in institutional schools in the total number of teacher at lower secondary level.

**Table 5.5 Share of lower secondary level teacher by school types, 2007**

Eco-belt	Total Teacher			% of Community schools' Teacher in total			% of institutional schools' Teacher in total		
	Female	Male	Total	Female	Male	Total	Female	Male	Total
Mountain	246	2,255	2,501	95.1	96.3	96.2	4.9	3.7	3.8
Hills	1,804	10,580	12,384	68.0	87.4	84.6	32.0	12.6	15.4
Valley	1,633	2,329	3,962	33.1	30.1	31.3	66.9	69.9	68.7
Terai	1,499	7,557	9,056	52.9	73.3	69.9	47.1	26.7	30.1
Total	5,182	22,721	27,903	53.9	77.7	73.3	46.1	22.3	26.7

The table 5.6 below shows the share of teacher in teaching profession by their social groups and eco-belts at lower secondary level on the basis of reporting in Flash I 2007. Compared to the share of Janajati teachers, the share of Dalit and Disabled teachers is considerably low at national as well as in all eco-belts.

Similarly, out of 5,182 female teachers at lower secondary level in the country 1.3 % is Dalit and 14.0 % is Janajati. Compared to other eco-belts the share of Dalit teachers is highest in Valley and the lowest is in Mountain belt.

Likewise, in total the highest share of Janajati is in Valley and the lowest share is in Hill belts. The total share of Disable teacher at lower secondary level is 0.9 % of this 1.0 % is female and 0.9 % is male.

**Table 5.6 Share of teacher by social groups at lower secondary level, 2007**

Eco-belt	Total Teacher			% of Dalit in total			% of Janajati in total			% of Disable in total		
	Female	Male	Total	Female	Male	Total	Female	Male	Total	Female	Male	Total
Mountain	246	2,255	2,501	0.8	1.0	1.0	9.3	11.4	11.2	0.0	0.9	0.8
Hills	1,804	10,580	12,384	1.1	4.1	3.7	11.1	9.1	9.4	1.6	0.9	1.0
Valley	1,633	2,329	3,962	1.6	7.6	5.1	20.3	18.2	19.1	0.8	1.7	1.3
Terai	1,499	7,557	9,056	1.3	3.3	2.9	11.5	10.6	10.8	0.5	0.6	0.6
Total	5,182	22,721	27,903	1.3	3.9	3.4	14.0	10.8	11.4	1.0	0.9	0.9

Source: Flash I Report 2007

### 5.3 Secondary level teacher

The table 5.7 shows the total number of teacher and the share of female teacher at secondary level by eco-belt on the basis of reporting in Flash I 2007. Out of 20,674 teachers working at secondary level 11.6 % are female. The highest share of female teacher is in Valley and the lowest share is in Mountain belt. Compared to the total share of female teacher at the national level, the share of female teacher in Mountain, Hills and Terai belts are low (See Annex: XXXII).

**Table 5.7 Number of secondary teachers by eco-belt, 2007**

Eco-belt	Female	Male	Total	Female % in total
Mountain	63	1,604	1,667	3.8
Hills	615	7,840	8,455	7.3
Valley	1,180	2,854	4,034	29.3
Terai	546	5,972	6,518	8.4
Total	2,404	18,270	20,674	11.6

Source: Flash I Report 2007

The following table 5.8 shows the share of teacher by types of schools in total number of teachers by eco-belts at secondary level in 2007. Out of total number of reported teachers in 2007 the total share of community schools' teacher is 67.6% of this 44.8% is female and 70.6% is male teachers. Similarly, the share of teacher in institutional schools' is 32.4% of this 55.2% is female and 29.4% is male. This indicates that compare to the share of male teacher the share of female teacher is higher in institutional schools in the total number of teacher at secondary level.

**Table 5.8 Share of secondary level teacher by school types, 2007**

Eco-belt	Total Teacher			% of Community schools' Teacher in total			% of institutional schools' Teacher in total		
	Female	Male	Total	Female	Male	Total	Female	Male	Total
Mountain	63	1,604	1,667	85.7	94.6	94.3	14.3	5.4	5.7
Hills	615	7,840	8,455	65.9	81.9	80.8	34.1	18.1	19.2
Valley	1,180	2,854	4,034	26.2	27.5	27.1	73.8	72.5	72.9
Terai	546	5,972	6,518	56.8	69.9	68.8	43.2	30.1	31.2
Total	2,404	18,270	20,674	44.8	70.6	67.6	55.2	29.4	32.4

Source: Flash I Report 2007

The table 5.9 shows the share of teachers' in teaching profession by their social groups and eco-belts at secondary level on the basis of reporting in Flash I 2007. Compared to the share of Janajati teachers, the share of Dalit and Disabled teacher is considerably low at national as well as in all eco-belts.

**Table 5.9 Share of teachers at secondary level by social groups, 2007**

Eco-belt	Total Teacher			% of Dalit in total			% of Janajati in total			% of Disable in total		
	Female	Male	Total	Female	Male	Total	Female	Male	Total	Female	Male	Total
Mountain	63	1,604	1,667	0.0	0.9	0.9	19.0	8.0	8.5	0.0	0.2	0.2
Hills	615	7,840	8,455	1.5	3.2	3.1	12.0	8.2	8.5	0.2	0.9	0.9
Valley	1,180	2,854	4,034	1.0	7.1	5.3	14.0	13.9	14.0	0.1	0.7	0.5
Terai	546	5,972	6,518	1.1	2.1	2.0	9.9	7.6	7.8	2.0	0.7	0.8
Total	2,404	18,270	20,674	1.1	3.3	3.0	12.7	8.9	9.3	0.5	0.8	0.7

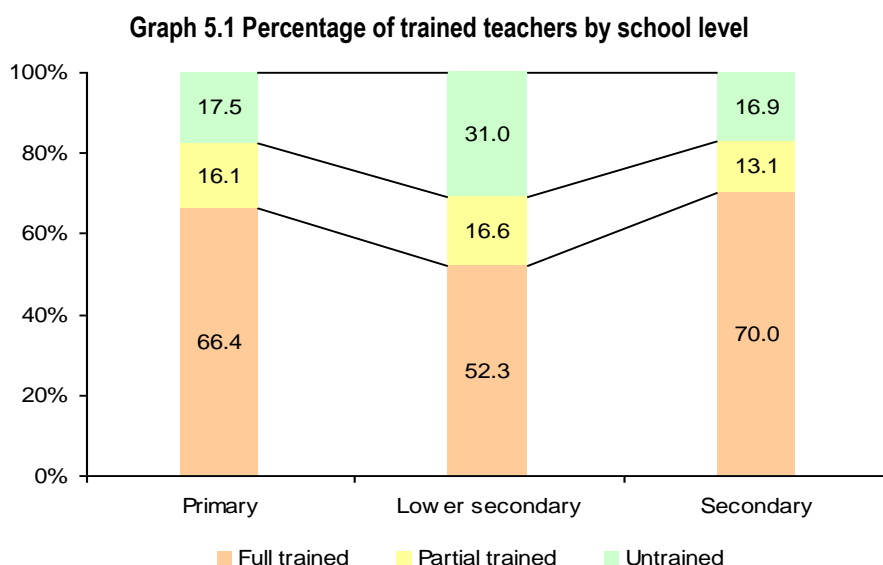

Source: Flash I Report 2007

The analysis shows, still in the teaching profession the majority of the teachers are found other than the Dalit and Janajati categories. Similarly, out of 2,404 female teachers at secondary level in the country 1.1 % is Dalit and 12.7 % is Janajati.

In total compared to other eco-belts the share of Dalit teachers is highest in Valley and the lowest share is in Mountain belt. Likewise, the highest share of Janajati is in Valley and the lowest share is in Terai belt. The total share of Disable teacher at secondary level is 0.7% of this 0.5% is female and 0.8% is male teachers.

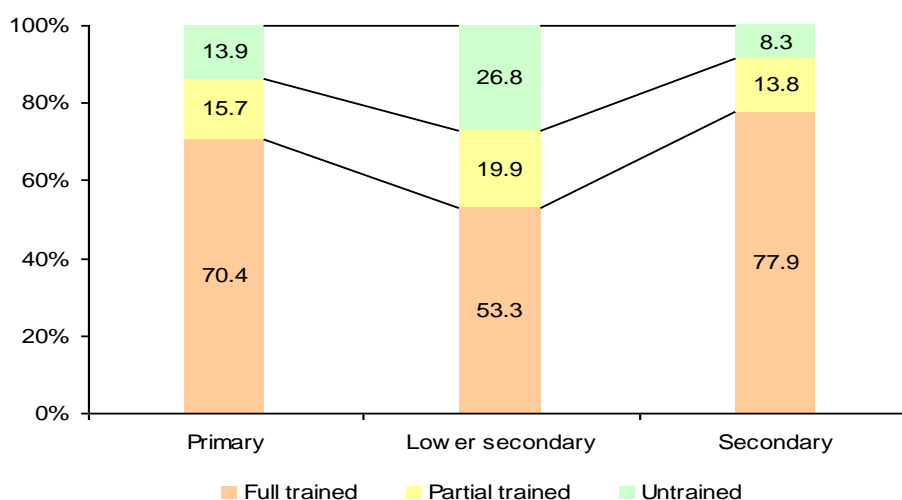

#### 5.4 Teacher training status for all types of school

In general the teacher training is one of the most important factors in quality of education. The trained teachers delivered the effective instruction in the class room teaching learning activities. The following graph 5.1 present the percentage of full trained, partial trained and untrained teachers at primary, lower secondary, and secondary level on the basis of reported number of teachers in Flash I 2007. It indicates that out of total 66.4% of primary teachers, 52.3% of lower secondary teachers, and 70.0% of secondary school teachers are fully trained. The bar graph also reveals that compared with primary and secondary levels, the lower secondary level has higher percentage of partial trained and untrained teachers (See Annex: XXXIII).

#### 5.5 Teacher training status in community schools only

**Graph 5.2 Percentage of trained teacher in community schools by level**

Source: Flash I Report 2007

The graph 5.2 above present the percentage of full trained, partial trained and untrained teachers in community school only at primary, lower secondary, and secondary level on the basis of reported number of teachers in Flash I 2007. It indicates that 70.4% of primary level teachers, 53.3% of lower secondary level teachers and 77.9% of secondary level teachers are fully trained. Compared with the percentage of trained teachers in all types of school, the teachers in community schools have relatively higher share of fully trained. The bar graph also reveals that compared with the primary and secondary levels, the lower secondary level has higher percentage of partially trained and untrained teachers (See Annex: XXXIV).

## 5.6 Ratios

### 5.6.1 School/Student Ratio (SSR) at primary level

School student ratio is the proportion between a school and the size of student enrolled in a particular year. This explains that, a school with a high School Students Ratio (SSR<sup>9</sup>) means high number of students are enrolled in that school.

**Table 5.10 Trend of School /Student Ratios at primary level by eco-belt, 2003-2007**

Eco-belt	2003	2004	2005	2006	2007
Mountain	95.4	107.5	105.3	109.4	103.3
Hills	121.9	136.1	129.7	129.1	124.0
Valley	143.4	158.4	150.6	131.1	111.8
Terai	220.1	240.7	253.4	252.7	231.0
Total	147.6	162.9	163.6	161.8	151.2

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

**Graph 5.3 Trends of School/Student Ratio at primary level, 2003-2007**

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

The table 5.10 and line graph 5.3 above show the trends of an average size of students at primary school for the five consecutive years (2003-2007). In total the average school student ratio is increased from 2003 to 2005 and decreased in 2006-2007.

<sup>9</sup> The ratios are calculated by taking the total number of students of all types of schools and divided by the total number of all types of recorded schools (by level).

The Terai belt has the highest Student School Ratio in all consecutive year whereas the Mountain belt has the lowest Student School Ratio. On average in 2007 there are 16 districts with lower (less than 1:100) School Student Ratio whereas the districts namely Rupandehi, Parsa, Bardiya, Saptari, Rautahat and Mahottari have higher School Student Ratio (more than 1:250).

### 5.6.2 School / Student Ratio at lower secondary level

The following table 5.11 and the line graph 5.4 show the trends of an average size of students at lower secondary school for 2003-2007. In total the average School Student Ratio is increased from 2003 to 2005 and decreased in 2006-2007.

Comparatively, the Terai belt has the highest School Student Ratio in all consecutive year whereas except in 2003 the Valley belt has the lowest School Student Ratio. On average in 2007 there are 13 districts with lower (less than 1:100) School Student Ratio whereas the 8 districts have higher (more than 1:200) School Student Ratio.

**Table 5.11 Trend of lower secondary School / Student Ratios by eco-belts, 2003-2007**

Eco-belt	2003	2004	2005	2006	2007
Mountain	93.1	154.9	112.5	101.1	104.1
Hills	133.8	205.5	159.3	140.8	140.4
Valley	112.9	109.1	108.6	84.3	101.9
Terai	198.2	224.8	204.0	193.8	192.5
Total	146.7	194.3	162.3	146.5	148.2

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

**Graph 5.4 Trends of lower secondary School/Student Ratios, 2003-2007**

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

### 5.6.3 School / Student Ratio at secondary level

The following table 5.12 and the line graph 5.5 present the trends of an average size of students at secondary school level for 2003-2007. The trends of School Student Ratio by eco-belt shows, there are fluctuation in all eco-belts in all consecutive year.

Comparatively, the Terai belt has the highest School Student Ratio whereas the Valley belt has the lowest School Student Ratio in all consecutive year. On average in 2007 there are 28 districts with lower (less than 1:100) School Student Ratio whereas the 11 districts have higher (more than 1:150) School Student Ratio (See Annex: XXXII).

**Table 5.12 Trend of secondary School / Student Ratios by eco-belts, 2003-2007**

Eco-belt	2003	2004	2005	2006	2007
Mountain	76.4	105.3	88.1	108.8	88.6
Hills	100.1	135.7	112.4	133.2	109.2
Valley	75.4	77.2	80.0	62.0	74.0
Terai	143.2	151.3	147.5	158.6	148.1
Total	107.8	129.2	116.5	127.5	113.9

**Graph 5.5 Trends of secondary School/Student Ratios, 2003-2007**

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

### 5.6.4 School / Teacher Ratio (STR) at primary level

The School Teacher Ratio is the association between the schools and the number of teaching staff. A low School Teacher Ratio indicates an inadequate number of teachers working in schools which could result in poor student performance and high School Teacher Ratio indicates an adequate number of teachers in schools giving students proper attention for their learning in each level.

The following table 5.13 shows the trend of school teacher ratio (STR<sup>10</sup>) from 2003 to 2007 by eco-belt. The school teacher ratio is gradually declining from 2003-2006, while it has increased in 2007. There has been a visible gap between the required number of teachers and the actual number of working teachers. It suggests there are many community schools newly established which could not receive the adequate number of teacher support from the government.

Comparatively, the Valley and Terai have higher ratio than that of Mountain and Hill belts. Compared to the national average there are wide variations on School Teacher Ratio in the district and school level. In this regard, the government need to undertake appropriate mechanism for the equal distribution of teachers in the districts (See Annex: XXXV).

**Table 5.13 Trend of School / Teacher Ratios at primary level by Eco-belt, 2003 – 2007**

Eco-belt	2003	2004	2005	2006	2007
Mountain	3.1	3.3	2.8	2.6	3.0
Hills	3.5	3.5	2.8	2.8	4.0
Valley	6.6	6.5	6.4	7.2	5.0
Terai	5.3	5.2	3.8	4.2	5.0
Total	4.1	4.1	3.3	3.4	4.0

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

#### 5.6.4 School / Teacher Ratio (STR) at lower secondary level

The following table 5.14 shows the trend of School Teacher Ratio at lower secondary level in 2003 to 2007 by eco-belt. Compared with the total ratio at national level, the ratio in Valley belt is higher and the ratio in Mountain belt is lower in all consecutive year. However, the ratio in all eco-belt has been almost same in 2007. There are 8 districts with below 1:2 School Teacher Ratios whereas 3 districts with more than 1:4 School Teacher Ratio in 2007 (See Annex: XXXIII).

**Table 5.14 Trend of School / Teacher Ratios at lower secondary level by Eco belt, 2003-2007**

Eco-belt	2003	2004	2005	2006	2007
Mountain	2.4	2.7	2.0	2.3	2.7
Hills	3.0	3.2	2.3	2.7	2.9
Valley	6.0	4.9	4.6	4.4	2.8
Terai	3.9	3.6	2.7	3.1	2.9

#### 5.6.5 School / Teacher Ratio (STR) at secondary level

The following table 5.15 shows the trend of school teacher ratio at secondary level in 2003 to 2007 by eco-belt. Over all the School Teacher Ratio at secondary level has been changed from 2003-2007. Compared with the total ratio at national level, the ratio in Valley belt is

<sup>10</sup> The ratios are calculated by taking the total number of teachers of all types of schools and divided by the total number of all types of recorded schools (by level).

higher and except in 2007 the ratio of Mountain belt is lower in all consecutive year. There are 5 districts with below 1:2 School Teacher Ratios whereas 8 districts with more than 1:5 School Teacher Ratio in 2007 (See Annex: XXXIII).

**Table 5.15 Trend of School / Teacher Ratios at secondary level by Eco belt, 2003-2007**

Eco-belt	2003	2004	2005	2006	2007
Mountain	3.7	3.8	3.0	2.8	3.6
Hills	4.0	3.9	3.1	3.2	3.5
Valley	7.6	6.4	4.2	5.4	3.8
Terai	5.1	4.4	2.9	3.5	3.4
Total	4.9	4.4	3.2	3.6	3.5

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

### 5.6.6 Student/Teacher Ratio (STR) in all types of schools

The Student Teacher Ratio assesses the level of human resource input in the schools in relation to the number of students. Generally, a high Student Teacher Ratio indicates that more number of students in the class which affects less attention in class room teaching learning activities and the low Student Teacher Ratio means smaller class size, which enables the teacher to deliver better instructions for each individual students resulting in better performance.

The following table 5.16 shows the Student Teacher Ratio<sup>11</sup> by level for all types of schools on the basis of reported number of teacher and students in 2007. Over all at the national level the total student teacher ratio for primary level is 1:38, for lower secondary level is 1:52, and for secondary level is 1:33. Compared to other regions the Terai belt has the highest STR at all level of education (See Annex:XXXV).

**Table 5.16 Student/Teacher Ratio by level and Eco-belt, 2007**

Eco zone	Total	Primary	Lower secondary	Secondary
Mountain	31	30	38	24
Hill	36	34	48	31
Valley	25	22	36	20
Tarai	53	51	67	44
Total	39	38	52	32

Source: Flash I Report 2007

**Table 5.17 Trend of Student/Teacher Ratio by level, 2003-2007**

Eco-belt	2003	2004	2005	2006	2007
Primary	36	40	49	45	38
Lower Secondary	41	56	60	49	52
Secondary	22	29	36	35	32

The table 5.17 above shows the trend of Student Teacher Ratio by level from 2003 to 2007 for all types of schools. As compare to the STR in 2005 the trend of STR was low in 2003-04

<sup>11</sup> The ratios are calculated by taking the total reported number of student of all types of schools and divided by the total reported number of teacher in all types schools (by level).

and it decreased in 2006 at all level of education. Compared to the STR in 2006 the STR in 2007 has increased at lower secondary level. Overall the STR at lower secondary level has been observed higher in all academic years (See Annex: XXXIV).

### 5.6.7 Student/Teacher Ratio (STR) in community school

The table 5.18 below shows the Student Teacher Ratios<sup>12</sup> (STR) in the community schools by level and eco-belt. The STR in community schools is calculated on the basis of total number of students in community schools and the total number of recorded teachers in the community schools by level. On average the STR in community schools is 1:42 at primary level, 1:69 at lower secondary level and 1:42 at secondary level in the school year 2007-08. It indicates that the highest STR is found at lower secondary level by 1:69, whereas the STR at both primary and secondary level is found by 1:42 in the community schools.

The analysis shows the highest STR is in Terai region at all levels whereas except at primary level the lowest STR is in Mountain region at both lower secondary and secondary levels. It also indicates the STR at primary level in Valley is comparatively low than in the other region and level of education. Similarly, the district level analysis shows there are 40 districts with the lower STR than in the national average (1:42) of this, 3 districts namely: Manang, Mustang and Bhaktapur districts have the STR less than 1:15 at primary level. Likewise, there are 34 districts with the STR of more than national average; of this 19 districts mostly from the Terai region and some districts from the Hilly region have the STR of more than 1:45 at primary level.

At the lower secondary level, the district level analysis shows there are 45 districts with the lower STR than in the national average (1:69) of this, 4 districts namely: Manang, Mustang, Humla and Dolpa districts have the STR less than 1:25. Likewise, there are 29 districts with the STR of more than national average; of this 19 districts have the STR of more than 1:80 at lower secondary level. At the secondary level, there are 45 districts with the lower STR than in the national average (1:42) of this, 7 districts namely: Manang, Mustang, Humla, Dolpa, Mugu, Bajura and Rasuwa districts have the STR less than 1:25. Likewise, there are 30 districts with the STR of more than national average; of this 15 districts have the STR of more than 1:50 at secondary level (See Annex: XXXV).

**Table 5.18: Student Teacher Ratio in all types of community schools by eco-zone and level<sup>13</sup>**

Eco zone	Total	Primary	Lower secondary	Secondary
Mountain	35	33	49	29
Hill	41	37	64	38
Valley	31	22	54	35
Tarai	60	56	88	53
Total	46	42	69	42

Source: Flash I Report, 2007

<sup>12</sup> The Student Teacher Ratio (STR) is calculated on the basis of recorded number of teachers in the community schools and the reported number of students in community schools by level in the school year 2007-08.

<sup>13</sup> The STR is calculated on the basis of reported number of students and teachers for the respective levels and types of schools.

## Chapter VI

### TEXTBOOKS, TRANSITIONAL LANGUAGE AND SCHOOL PHYSICAL FACILITIES INFORMATION

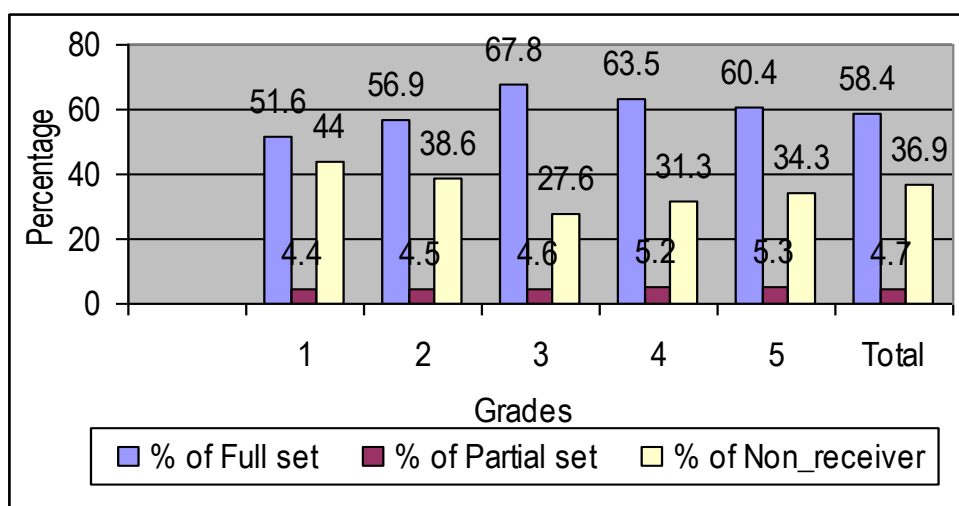

This section has covered the availability of free textbooks, transitional language supports at primary level and the availability of basic physical facilities in the schools on the basis of reporting from the schools in Flash I 2007.

#### 6.1 Availability of free textbooks at primary level

The availability of free textbooks in time provides to improve and enhance the effective environment of classroom teaching learning activities. Research studies also show that, in time availability of textbooks has a positive impact on student achievement. The government has the programme to deliver free textbooks for all community primary schools' students within the first week of the academic session.

The following bar graph 6.1 presents the availability of textbooks within the first week of the session year 2007. Out of total student 58.4% children have received full set of textbooks and 4.7% have received partial set of textbooks within the first week of the academic session 2007 (i.e. 7 Baisakh 2063). The status of the availability of free textbooks has improved as compared to the same period in the previous academic session, 2006 when 54% students had received free a full set of textbooks. The figure shows still 36.9% student could not received any textbooks by the reference date, which indicates the government should develop an effective mechanism to deliver the free text books in time in all districts (See Annex:XXXVI).

**Graph 6.1 Availability of free textbooks at primary level, 2007**

Source: Flash I Report 2007

#### 6.2 Number of schools with transitional language support

The following table 6.1 presents the number of schools with the transitional language (local language) support in class room teaching learning activities for the students who were not speaking Nepali language as a mother tongue at primary level. The Maithali language was found the most widely used particularly in Terai belt in the primary classes. Likewise,

Tamang, Bhojpuri and Bajika languages were used in more than 100 schools as major languages in grade 1 for the medium of instruction. The teachers used the local languages mostly in the lower grades at primary level. The details are presented in the following table.

In addition to this the languages used mostly in the districts are: **Maithali:** Dhanusha, Mahottari, Sarlahi, Rautahat and Parsa / **Bhojpuri:** Parsa, Rautahat, Bara, Sarlahi and Mahottari / **Tamang:** Makwanpur, Kavrepalanchok, Nuwakot, Rasuwa, Sindhupalchok, Lalitpur, Dolakha, Ramechhap, Sindhuli, Sarlahi, Bhaktapur, Parsa, Rautahat and Chitwan / **Bajika:** Rautahat and Sarlahi / **Nepali:** Sarlahi, Lalitpur, Rautahat, Dhanusha, Mahottari, Makwanpur and Bhaktapur / **Newari:** Bhaktapur, Lalitpur, Shindhupalchok, Ramechhap, Dolakha, Nuwakot and Kathmandu / **Tharu:** Sarlahi, Bara, Rautahat and Mahottari Sarlahi, Dang, Siraha, Nawalparasi, Banke, Parsa, Chitwan, Udayapur, Bardiya, Makwanpur and Kanchanpur / **Hindi:** Sarlahi, Rautahat and Mahottari / **Awadhi:** Sarlahi and Rautahat / **Magar:** Mahottari, Ramechhap, Sindhuli / **Magahi:** Ramechhap and Dhanusha / **English:** Makwanpur and Sarlahi / **Mewahang:** Makwanpur and Sarlahi / **Others:** Ramechhap, Rautahat, Sarlahi, Lalitpur and Bara.

**Table 6.1 Number of schools with transitional language support**

Languages	Primary Grades						% of Language used in total
	1	2	3	4	5	Total	
Newari	67	47	37	27	26	204	2.7
Maithali	508	499	477	415	394	2,293	30.4
Tamang	792	535	394	148	117	1,941	25.7

### 6.3 Current status of school physical facilities

#### 6.3.1 Drinking water facilities in the school

The EFA programme 2004-09 has focused on providing pure drinking water facilities in all school and has provided the supports to schools for pure drinking water facilities. Based on

the geographical location of the school, the type of drinking water differs from one school to others. The available sources of drinking water in the schools are tap, tube well and others.

The following graph 6.2 and 6.3 shows the types of drinking water facilities in all schools in the country. Altogether, 55.1% schools have the easy access of drinking water facilities, of them the percentage of schools by types of sources of water are 71.7% school have Tap, 21.6% school have Tube well, 3.7% school have Well and 3.0% school have other sources of drinking water. The data shows most of the schools in Terai districts have the easy access of drinking water facilities. It indicates that the government should focus on providing drinking water facilities to all schools especially in Mountain and Hilly districts.

**Graph 6.3 Availability of drinking water facilities by types of source and eco-belt, 2007**

### 6.3.2 Availability of toilet facilities

The EFA programme 2004-09 has focused to provide the supports for toilet facilities to all children in the school especially for girls' students. The following graph 6.4 and 6.5 shows the status of toilet facilities in schools by eco-belt on the basis of reporting to the availability

of toilet facilities in school. Overall 61.9% schools have at least one toilet facility, in addition to this 35.9% schools have common toilets, 33.9% schools have separate toilet facilities for girls and 30.2% schools have separate toilet facilities for teachers.

**Table 6.4 Availability of toilet facilities by eco-belt, 2007**

Source: Flash I Report 2007

**Graph 6.5 Availability of toilet facilities by types and eco-belt, 2007**

Source: Flash I Report 2007

### 6.3.3 Students Classroom Ratio in community schools

The following table 6.2 shows the Students Classroom Ratio<sup>14</sup> in community schools on the basis of reported number of school for the physical information and the total reported number of students in grade 1-10 in flash I 2007.

The table presents the districts with the highest students classroom ratio which mostly from the Terai belt. Similarly, the districts from the Mountain, Hill and Vellay have the lower

<sup>14</sup> The ratios are calculated by taking the total number of reported students of all types of schools in grade 1-10 and divided by the total number of classrooms of community schools.

student classroom ratios than in the Terai belt. Although the analysis is on the basis of district average, there are wide variations within the schools especially in the Terai districts.

**Table 6.2 Ten districts with highest and lowest students classroom ratio in community schools, 2007**

Districts	Students /Classroom ratio (more than 1:50 students)	Districts	Students /Classroom ratio (less than 1:18 students)
Mahottari	50.3	Manang	3.6
Banke	51.3	Mustang	3.8
Bardiya	51.3	Dolpa	10.2
Bara	54.7	Mugu	15.1
Rautahat	55.3	Humla	15.3
Parsa	56.7	Myagdi	15.9
Gulmi	63.9	Rasuwa	16.4
Dhading	64.6	Lamjung	16.7
Dhanusha	69.5	Darchula	16.8
Saptari	139.9	Bhaktapur	17.1
Rukum	148.9	Kaski	17.9

Source: Flash I Report 2007

### 6.3.4 Health facilities

The following Graph 6.6 shows the access of Health facilities in 2007. In total, 77.3% schools reported that they have the access of health facilities. Compared to other eco-belts the highest ratio is found in Valley belt, and the lowest ratio is found in Mountain belt.

**Graph 6.6 Availability of Health facilities, 2007**

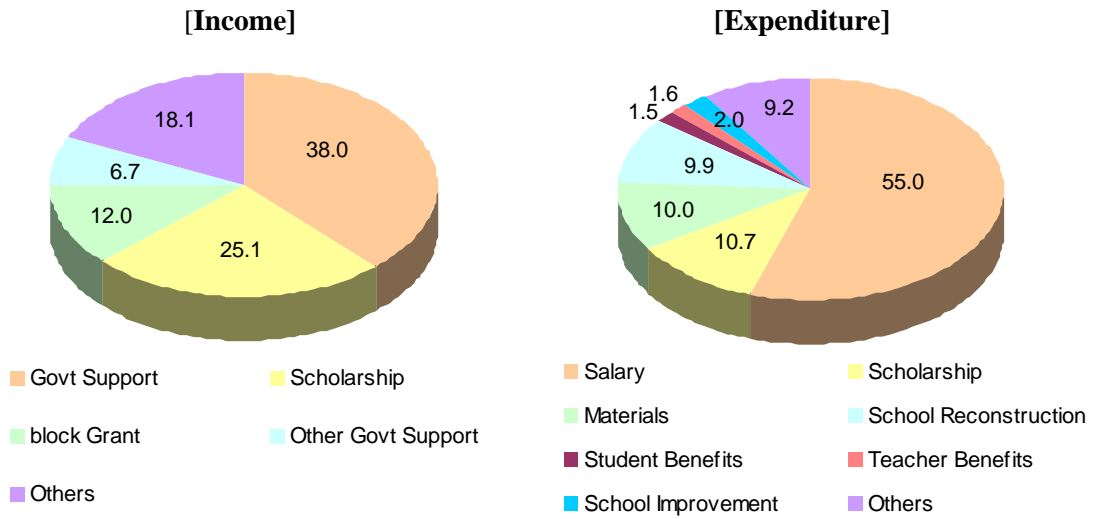

Source: Flash I Report 2007

### 6.3.5 Financial Information

The following Graph 6.7 shows school income and expenditure status in 2007 on the basis of reporting from the schools. The Pie-charts shows out of total income at schools, 38.0% is from government support for teacher salaries, 25.1% for scholarship, 12% for block grants, 6.7% government support for other activities and 18% from others source (i.e. from local community, local government, NGO/INGOs and others). Similarly, out of total expenditures

at schools 55.0% expenditures goes to teacher salary, 10.7 for scholarship, 10.0 for teaching materials, 9.9% for school building and furniture, 9.2% for other activities and rest of the budget for student and teacher benefits and textbooks through the school improvement plan implementation respectively.

# Chapter I

## INTRODUCTION

### 1.1 Background

The Department of Education (DOE) has been publishing a consolidated report from 2005 and it is a continuation of the same aim of producing a comprehensive analytical report providing a holistic overview of the school level educational statistics of Total, 2007. Its main purpose is to furnish the broad national as well as ecological and district level trends in terms of access, efficiency, quality and equity along with performance and programme indicators of the Education for All (EFA) and the Secondary Education Support Programme (SESP). The Consolidated Report is the consolidation of school level educational information through Flash Reports to support the monitoring of EFA, 2004 - 2009. Thus it is presented as an attempt to help users and readers to identify the changing trends and programme impact of EFA on the school education system in the country. It also traces the progress of the EFA indicators and assists in decision making to improve the programme.

This report includes the analysis of schools, student enrolment and teacher information with disaggregated data. In addition, it also covers the indicators of student participation; GIR, GER, NER and GPI by level as well as the students' performance indicators and internal efficiency of the education system. Moreover, this report presents the availability of school facilities and services in terms of teachers, textbooks, transitional language support; access to drinking water, classrooms, toilet facilities and basic learning materials at the school level.

### 1.2 Objectives

The main objectives of this Report are:

- To evaluate and analyze the broad trends of school level educational information,
- To compare and assess the progress of EFA indicators,
- To appraise and evaluate the overall functioning of the school education system,
- To facilitate the use of data for future planning, monitoring and evaluation.

### 1.3 Methodology

- The consolidated report is prepared based on the School Level Educational Information (EMIS) of Total 2003, Flash report 2004, 2005, 2006 and 2007.
- Ecological belts along with districts have been taken as the main unit of analysis.
- Population data has been generated through Population Projection for Total 2001-2021, jointly published by the Central Bureau of Statistics (CBS) and Ministry of Population and Environment (MOPE).
- The schools are counted by the level of education offered and as a unit by the total grades offered. For example, a school offering grades 1-10 is counted at three levels - as a primary, lower secondary and secondary level. Similarly, this school is counted as one school (a unit).

## **1.4 Features of report**

The Consolidated Report, 2006 is mainly focused on the interpretation of EFA and SESP indicators based on school, student, teacher and programme implementation data. The report has been grouped into six chapters.

- The first chapter covers the general background of the education system, objectives of the report, methodological approach, features and limitations of the report.
- The second chapter of the report includes the trends of schools in the country,
- The third chapter of the report presents the analysis of enrolment and participation, which includes the number and trends of student enrolment by level as well as the indicators.
- The fourth chapter of the report focuses on internal efficiency and covers the indicators on promotion, repetition, dropout, survival rate and transition rate.
- The fifth chapter of the report analyzes teacher information and ratios at different levels and school types.
- The sixth chapter focuses on physical infrastructure information covering availability of free textbooks in the primary level, number of schools with transitional language support, scholarships, disabilities enrolment and current status on infrastructure at the school level.

The main emphasis focuses on trend analysis of enrolment, quality, internal efficiency and equity indicators and makes assessments on further improvement on EFA and SESP indicators. The detailed datasheets have been annexed in the end of the report including statistical tables of school, enrolment, teacher, etc. It also contains the definition of indicators and a list of abbreviations.

## **1.5 Limitations of the report**

- This report could not present separate information on Madrassas, Gumbas and other religious schools.
- This report does not capture comprehensive information about higher secondary education and the information of proficiency certificates level as well as the information of technical and vocational education.
- The report could not capture the financial, learning achievement and the literacy information.

## Chapter II

### SCHOOL INFORMATION

#### 2.1 Background

The school education system in Nepal is structured as ECD/PPC, primary, lower secondary, secondary and higher secondary education. Many of these schools include Early Childhood Development (ECD) or pre-primary classes (PPC) of one to three years duration. In institutional schools they are generally called nurseries or kindergartens whereas in community schools they are known as “Shishu Kachha” (pre-primary class). In addition, there are community-based ECD centres that serve 3-4 year olds and are located near the vicinity of the communities. Primary schools provide five years of education to the 5-9 year old school-going age children and consist of five grades from 1-5. Age 5 is the prescribed age to get entry into grade one in the school education system. The availability of schools<sup>2</sup> within reasonable walking distance to all 5-9 years age group children is the first step towards achieving universal primary/basic education by the year 2015.

The lower secondary education consists of three years with the grades 6-8. Similarly, secondary and higher secondary education comprise two years each with grades 9-10 and grades 11-12 respectively. Altogether school education continues for 12 years excluding pre-school education<sup>3</sup>. In addition to this there are some campuses affiliated to the Tribhuvan University that offer proficiency certificates of two years equivalent to higher secondary education. Moreover, diploma courses of three years equivalent to higher secondary education are also offered by the institutions of the Council for Technical Education and Vocational Training (CTEVT).

The schools are categorized as community aided, community managed, community unaided and institutional schools. The community aided schools are those schools which receive regular government grants in the form of teachers’ salary for the approved positions, earmark grants, block grants and incentive grants. The government has adopted the policy for aided community schools to transfer their management responsibility to the local community. These schools receive all the regular grants and other additional supports from the government for improving their effectiveness in management and teaching learning environment to ensure learning outcomes as expected by the curriculum.

The unaided community schools do not receive regular government grants but they receive fixed basic teacher salary grants and block grants. The institutional schools depend on

---

<sup>2</sup> Both community (government aided/unaided) and institutional (private) schools operate in Nepal. The Nepal Living Standards Survey II, 2003-2004 demonstrated the access of 91.4% households to reach the nearest primary school within half an hour with variation between urban (98.8%) and rural (89.9%). The lowest access (77.7%) to the nearest primary school within 30 minutes was found in the eastern mountains and hills i. e. 22% households had to travel more than 30 minutes to reach the nearest primary school. The variation for the households between the poorest and the richest consumption quintiles was found at 9.5% i. e. only 86.5% households in the poorest consumption quintile could reach the nearest primary school within 30 minutes compared to 96% in the richest quintile.

<sup>3</sup> Generally the formal schooling starts from grade 1.

parental support and are managed and owned by the individual or private and public trusts. The institutional schools charge tuition and other fees to the students. The following figure shows the school education system in the country.

**Fig. 2.1 School education structure in Nepal**

## 2.2 Early Childhood Development / Pre-Primary Classes (ECD/PPCs)

International experiences suggest that pre-primary and ECD programme are the foundation of basic education and include a wide range of programme aiming at the holistic physical, cognitive and social development of children before they enter into primary education. It is considered as a way of reducing under age children and minimizing overcrowding in grade 1 at the primary level. Especially, the ECD/PPCs programme focuses to the under five year's children in the community.

The following table 2.1 presents the number of recorded ECD/PPCs by ecological belt in 2007. In total there are 19,936 ECD/PPCs are running in the country, of this 16,523 are community schools and community based ECD/PPCs, and 3,413 are institutional school based PPCs (See annex: I).

**Table 2.1 Total number of recorded ECD/PPCs by eco-belt, 2007**

Eco-belts	Total recorded number of community based ECD/PPCs		
	Community & school based ECD/PPCs	Institutional PPCs	Total
Mountain	1,383	78	1,461
Hills	7,059	857	7,916
Valley	442	1,073	1,515
Terai	7,639	1,405	9,044
Total	16,523	3,413	19,936

Source: Flash I 2007

## 2.3 School

Table 2.2 below presents the trend of schools distribution from 2003 to 2007 by level and unit. It shows both the levels and the total number of schools have significantly increased from 2003 to 2007 by an annual average 1.7, 4.2, and 5.6 percentage for primary, lower secondary, and secondary level respectively. The total schools in the country have also increased by 1.8%.

Although the level and number of schools show increasing trends at the national level, there are 11 districts (Ilam, Udayapur, Dhading, Sarlahi, Rautahat, Mustang, Arghakhanchi, Dolpa, Salyan, Jajarkot and Darchula) where the number of schools decreased in 2007 compared to 2003. The remaining districts show significant gains in level and number of schools. The reasons for a decrease in the number of schools at districts level might be the under reporting of the schools or merging of two or more schools into one school (See annex: III)

**Table 2.2 Trends of total recorded schools by level and unit, 2003-2007**

Levels/unit	2003	2004	2005	2006	2007	Average annual growth rate (%)
Primary level	27,268	24,746	27,525	27,901	29,220	1.7
Lower secondary level	8,249	7,436	8,471	8,880	9,739	4.2
Secondary level	4,741	4,547	5,039	5,329	5,894	5.6
Total (Units)	27,415	26,277	28,026	28,131	29,448	1.8

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

## 2.4 School running by grade

Table 2.3 below explains the distribution of reported number of schools running by grade from 2003-2007. These categories provide substantial support for restructuring schools into 1-8 basic and 9-12 secondary education system in the country. Currently, none of the schools are running with the grade 9-12 in secondary level but there are 2,204 lower secondary schools found with the grade 1-8. Primary schools with the grades 1-5 were the most numerous in the country in 2007.

**Table 2.3 Distribution of reported schools by grades, 2007**

Grade	2003	2004	2005	2006	2007
1	409	287	178	218	567
1-2	738	660	530	483	556
1-3	4,324	4,288	4,126	4,575	4,399
1-4	1,056	1,033	956	1,163	1,392
1-5	12,639	11,343	10,620	12,066	12,064
1-6	323	318	226	311	540
1-7	1,093	976	904	952	976
1-8	2,092	1,722	1,862	2,104	2,204
6-7				4	2
6-8			1	8	3

Grade	2003	2004	2005	2006	2007
1-9	189	168	178	316	372
1-10	3,956	3,600	3,335	4,029	4,166
6-9			4	9	5
6-10	116	301	85	101	86
8-10	31	127	2	4	-
1-11	31	126	28	59	91
1-12	418	225	411	513	715
6-11			1	1	5
6-12			49	58	74
11-12		249	8	26	30
Total	27,415	25,423	23,504	27,000	28,304

Source: School level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

## 2.5 Proportion distribution of schools by eco-belt

### 2.5.1 Primary level

The following graphs 2.1 depict the number and distribution of primary school level by eco-belt in 2003 to 2007. It shows that the over all trend of proportional distribution of primary school level by eco-belt has not considerably changed from 2003 to 2007. Compared to the proportion in 2003, there is a slight decrease in Terai and Valley in 2004, whilst this is followed by an increase from 2004 to 2007 (See annex: III).

**Graph 2.1 Proportion of primary level school by eco-belt, 2003-2007**

Source: School level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

### 2.5.2 Lower secondary level

Similarly, the following graph 2-2 shows the number and distribution of lower secondary schools by eco-belt from 2003 to 2007. There were 8,249 lower secondary schools in 2003 which reached 9,739 in 2007. The highest proportion of lower secondary schools is found in Hills in all years. Although the number of lower secondary schools is increasing, the proportion shows there are no significant differences in the proportional distribution over the five years period (See annex: III).

**Graph 2.2 Proportion of lower secondary schools by eco-belt, 2003-2007**

Source: School level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

### 2.5.3 Secondary level

Likewise, the graph 2.3 below shows the trends of secondary schools from 2003 to 2007. The data found a decline from 2003 to 2004 and an increase from 2005 to 2007. The fluctuation of the data reveals the under reporting of secondary schools in 2004. The chart also reveals a similar proportional distribution of secondary schools as the proportional distribution of primary and lower secondary level (See annex: III).

**Graph 2.3 Proportion of secondary schools by eco-belt, 2003-2007**

Source: School level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

### 2.6 Ratio of schools

The table 2.4 below shows the ratio of lower secondary to primary, secondary to lower secondary and higher secondary to secondary levels of schools from 2003 to 2007. Compared to the ratios in 2003 and 2004 it shows there has been a more pronounced improvement from 2005 to 2007 (See Annex: IV).

**Table 2.4 Trends of school ratios (in level) in 2003-2007**

	Lower secondary to Primary	Secondary to Lower secondary	Higher secondary to Secondary
2003	5.5	0.7	10.6
2004	3.3	1.6	7.6
2005	3.2	1.7	10.1
2006	3.1	1.7	4.5
2007	3.0	1.7	3.8

Source: School Level Educational Information of Nepal, 2003 and Flash I Reports 2004-07

The district level analysis of the ratios of schools in 2007 shows there are 55 districts with a high ratio from lower secondary level to primary level of this 3 districts namely; Dolpa, Salyan and Mugu have the highest ratio of lower secondary level to primary level (i.e. 1:5 or one lower secondary level can serve more than 5 primary levels). Similarly, there are 42 districts with a high ratio from secondary level to lower secondary level of this 10 districts namely; Darchula, Pyuthan, Dolpa, Bajura, Rolpa, Jumla, Rukum, Humla, Jajarkot and Manang have the highest ratio of secondary level to lower secondary level (i.e. more than

1:2.1 or one secondary level can serve more than 2 lower secondary levels). Likewise, there are 45 districts with a high ratio from higher secondary level to secondary level of this 7 districts namely; Myagdi, Pyuthan, Mustang, Jumla, Humla, Bajura and Rolpa Darchula, Pyuthan, Dolpa, Bajura, Rolpa, Jumla, Rukum, Humla, Jajarkot and Manang have the highest ratio of higher secondary level to secondary level (i.e. more than 1:7 or one higher secondary level can serve more than 7 secondary levels).

## Chapter III

### ENROLMENT

#### 3.1 Background

Enrolment shows the level of participation in education. The government has placed emphasis on increasing enrolment in schools by various means of support through the EFA, SESP and other programmes; particularly focusing on the enrolment of girls, Dalits and disadvantaged community children.

#### 3.2 Enrolment in ECD/PPCs

ECD/PPCs programmes are inevitable for reducing educational wastage especially in the early grades of primary education. Table 3.1 below shows the enrolment trend in ECD/PPCs programme from 2003-07. Compared to the enrolment in 2003 the enrolment in the following years has increased by more than three times.

The increment in enrolment shows that girls' enrolment increased more than boys' enrolment during the five years. This indicates an awareness of local people and the access to ECD/PPCs programme are increasing year by year. In this respect the institutional schools have also played a vital role to achieve this progress (See annex: V).

**Table 3.1 Enrolment trends in ECD/PPCs by sex, 2004-2007**

	2003	2004	2005	2006	2007	Average annual growth rate (%)
Girls	11,3653	23,5512	42,6062	26,4890	378,437	35.1
Boys	14,3468	27,6639	49,6495	28,9094	444,669	32.7
Total	25,7121	51,2151	92,2557	55,3983	823,106	33.8

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

#### 3.2.1 Enrolment share in ECD/PPCs by social groups

The graph 3.1 below shows the enrolment of children in ECD/PPC by social groups and sex in 2007-08. Out of total enrolment in ECD/PPCs in 2007-08 there were 378,437 girls and 444,669 boys. The share of Dalit and Janajati in total enrolment is 13.3% and 38.9% girls and 12.4% and 37.6% boys respectively. Similarly, the highest percentage of Dalit and Janajati students are in hill and Valley zones whereas the lowest percentage of Dalit and Janajati students are in Valley and Mountain zones.

The GPI in ECD/PPCs enrolment is 1.07% for Dalit, 1.03% for Janajati and 0.96% for other students. Compared with the national level, the Dalit enrolment is relatively higher in Mountain and Hills zones whereas it is quite low in Valley. Similarly, the Janajati enrolment is comparatively higher in Valley than other ecological zone (See annex: VI).

**Graph 3.1 Share of enrolment in ECD/PPCs by eco-belt and social groups, 2007-08**

Source: Flash I Reports 2007

The following table 3.2 presents the trends of enrolment share of Dalit and Janajati in total enrolment of ECD/PPCs for 2004 to 2007. Over all, compared to 2004 and 2007, the share of Dalit and Janajati enrolment has decreased.

**Table 3.2 Share of Dalit and Janajati enrolment in total enrolment of ECD/PPCs, 2004-2007**

	2004		2005		2006		2007	
	Dalit	Janjati	Dalit	Janjati	Dalit	Janjati	Dalit	Janjati
Girls	14.0	43.1	15.2	39.2	15.2	41.4	13.3	38.9
Boys	13.9	41.4	14.7	38.3	14.7	40.9	12.4	37.6
Total	13.9	42.2	14.9	38.7	15.0	41.1	12.9	38.2

Source: Flash I Reports, 2004-07

### 3.2.2 ECD/PPCs GER

The following Graph 3.2 and table 3.3 show the trends of ECD/PPCs GER in 2004-07. In 2001, the GER in ECD/PPCs was 13% while the government has set the 51% EFA targets for 2004-09 and 80% by 2015. The Flash I, 2007 data shows that the country has achieved 60.2% GER in ECD/PPCs. It shows the GER for ECD/PPCs is gradually increasing.

The analysis of the ECD/PPCs GER by eco-belt in 2007 shows the Mountain belt has 39.8% whereas it is 52.0% and 58.1% GER for Hills and Terai belts respectively. The highest GER is observed in the Kathmandu valley with 175.4%. It shows more institutional schools with pre-primary classes are located in the urban area (See Annex: VII).

Graph 3.2 GER trend on ECD/PPC by sex, 2004-2007

Table 3.3 ECD/PPC GER in 2004-07 by eco-belt

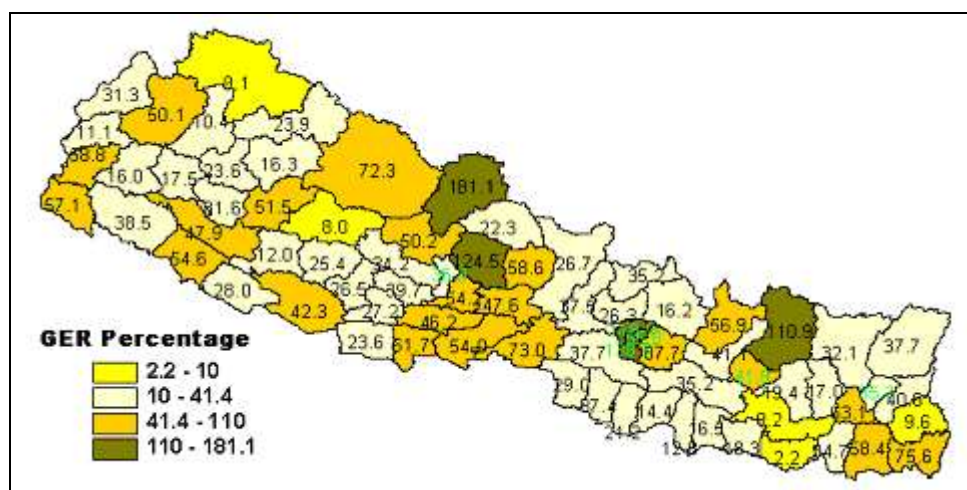

Eco-belt	2004			2005			2006			2007		
	Girls	Boys	Total	Girls	Boys	Total	Girls	Boys	Total	Girls	Boys	Total
Mountain	9.8	11.6	10.7	50.8	60.0	55.4	37.3	36.4	36.8	37.8	41.7	39.8
Hills	34.3	35.3	34.8	68.4	70.3	69.4	38.3	37.9	38.1	50.9	53.1	52.0
Valley	160.6	165.7	163.3	200.5	208.0	204.4	129.0	127.0	128.0	171.8	178.8	175.4
Terai	32.3	38.3	35.4	55.4	64.2	59.9	35.1	37.4	36.3	53.1	62.9	58.1
Total	37.3	41.1	39.4	66.6	73.1	69.9	40.9	41.9	41.4	56.8	63.4	60.2

Source: Flash Reports 2004-07

The maps 3.1 and 3.2 below present the district wise ratio of ECD/PPCs programme and the 3-4 years' population and the Gross Enrolment Rate in 2006. On average the ratio of ECD/PPCs programme and the 3-4 years' population is 1:82. The highest ratio was found in Rautahat district and the lowest one is in Mustang district. The comparison between the ratio of ECD/PPCs programme and the 3-4 years' population with GER shows a large gap is found in some districts.

There are 5 districts (Saptari, Rukum, Humla, Udayapur, and Ilam) with low GER and high ratio of ECD/PPCs programme and the 3-4 years' population. A very low GER (less than 10%) could be the result of under reporting of ECD/PPCs enrolment. Similarly, there are 3 districts (Mustang, Bhaktapur, Lalitpur) with high GER and a low ratio of ECD/PPCs programme and the 3-4 years' population. Although, on average the GER in ECD/PPCs programme is less than 50%, some districts have achieved more than 100% GER in 2006. A higher GER indicates over and under age children being enrolled in ECD/PPC programme.

Map 3.1 Gross Enrollment Rate (GER) in ECD/PPCs, 2006

Map 3.2 Ratio of ECD/PPCs and 3-4 years age group population, 2006

### 3.3 Percentage of students in grade 1 with ECD/PPCs experiences

The table 3.4 shows the percentage of students in grade 1 with ECD/PPCs experience in 2003-07. In 2003 the percentage of students in grade 1 with ECD/PPCs experience was 7.7% and reached to 33.1% in 2007 which is almost 27% lower than the EFA target for 2009. This indicates that much effort is needed to meet the target set in the EFA 2004-09 ( See Annex: VIII).

Table 3.4 Percentage of students in grade 1 with ECD/PPCs experiences

	2003	2004	2005 <sup>4</sup>	2006	2007
Girls	7.5	10.7	NA	18.1	32.0
Boys	7.8	11.1	NA	18.4	34.2
Total	7.7	10.9	NA	18.3	33.1

Source: School level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

<sup>4</sup> Since the total numbers of children in grade 1 with ECD/PPCs experiences were not available, the indicator is not presented for 2005.

The percentage of Dalit and Janajati students in grade 1 with ECD/PPC experiences also increased in the school year 2007 from the school year 2004. The Flash report I, 2007 shows the percentage of Janajati students with ECD/PPCs experiences is 33.7%, whereas it is 25.9% for Dalit children. The high percentage of students enrolled in grade 1 with ECD/PPCs experience indicates the high participation of students in grade 1 with the pre-preparation of primary education.

### 3.4 Primary enrolment

#### 3.4.1 Enrolment trends

The table 3.5 and graph 3.3 below depict the enrolment trends at primary level in 2003-07. The total enrolment in 2003 was 4,025,692 and reached 4,418,713 in 2007 with an average annual growth of 2.4%. Compared with the total growth rate in enrolment, the highest growth have been found in Mountain and Terai belts with 3.7% and 3.4% whereas the lowest growth rate is in Valley belt. Although the population in migration seems to be high in Valley the enrolment growth rate for Valley shows a negative trend in the period of 2003-2007. Overall the enrolment growth is higher for girls than growth of boys and total enrolment (See Annex: IX).

**Table 3.5 Enrolment trends at primary level by eco-belt & sex, 2003 – 2007**

Eco-belt	2003		2004		2005		2006		2007	
	Girls	Total	Girls	Total	Girls	Total	Girls	Total	Girls	Total
Mountain	144,340	323,545	151,568	336,491	166,201	358,032	180,452	379,892	181,778	373,494
Hills	842,401	1,768,514	872,592	1,808,105	919,349	1,871,671	944,339	1,902,248	936,463	1,875,265
Valley	114,717	239,057	109,201	228,125	128,515	269,014	113,411	234,112	113,311	234,868
Terai	726,129	1,694,576	731,651	1,657,324	920,581	2,003,980	943,044	1,998,808	928,211	1,935,087
Total	1,827,587	4,025,692	1,865,012	4,030,045	2,134,646	4,502,697	2,181,247	4,515,059	2,159,763	4,418,713

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

**Graph 3.3 Average annual growth at primary level (2003-2007)**

### 3.4.2 Percentage change in the enrolment from beginning of the academic year to end of the academic year- 2006

The graph 3.4 below shows percentage change in the grade wise enrolment from beginning of the academic year to end of the academic year in 2006 by eco-belt. It indicates that the both status of the enrolment, that is; in some grades the enrolment have decreased as well as increased at the end of the academic year. In total the enrolment in grade 1, 6, 7 and 8 has increased whereas in other grades it has decreased. The analysis by eco-belt shows in some eco-belts the enrolment has increased in a specific grade whereas in some eco-belts it has decreased at the end of the academic year in 2006. The increasing and decreasing in enrolment present the higher and lower retention of students within an academic year (See Annex X).

**Graph 3.4 Percentage change in the enrolment from beginning of the academic year to end of the academic year- 2006**

### 3.4.3 Enrolment at primary level by types of school

The table 3.6 shows the share of students at primary level by types of schools in 2003-07. The share of enrolment at primary level in community schools was 89.2% in 2003 and reached 89.8% in 2007. The enrolment share in institutional schools has been seen fluctuated in the period of 2003-07. The share of enrolment by sex at primary level is quite different in the types of schools. It shows more girls are enrolled in community schools whereas more boys are enrolled in institutional schools. It indicates the attitude of parents in choosing the institution for their children's education (See Annex: XI and XII).

**Table 3.6 Percentage of enrolment by types of school, 2003-2007**

	All types of community schools			Institutional schools		
	Girls	Boys	Total	Girls	Boys	Total
2003	90.0	88.5	89.2	10.0	11.5	10.8
2004	90.3	88.7	89.5	9.7	11.3	10.5
2005	94.7	93.4	94.0	5.3	6.6	6.0
2006	92.4	90.5	91.4	7.6	9.5	8.6
2007	91.1	88.5	89.8	8.9	11.5	10.2

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

The graph 3.5 below presents the share of students by grade in total enrolment in 2003-07. The analysis of the data shows the higher the grade the lower the share of students. Compared to the share of enrolment in grade 5 the share of enrolment in grade 1 is more than double. It shows the share of enrolment in grade 1 is more than 30% whereas the share of enrolment in grade 5 is less than 15% from 2003-07. It indicates that the size of class and volume of student is larger in grade 1 compared to other grades.

**Graph 3.5 Trend of grade wise share of enrolment in total enrolment at primary level**

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

### 3.4.4 Enrolment at primary level by social groups

The table 3.7 present the share of Dalit and Janajati students in total enrolment at primary level in 2003-07. It also presents compared to the others children how the Dalit and Janajati children have been participated in education. The share of Dalit in total number students at primary level is fluctuated in the academic year 2005; where as the share of Janajati is in continuously increasing trends in the academic year 2003-07 (See Annex: XIII & XIV).

**Table 3.7 share of Dalit and Janajati student in total enrolment at primary level**

Year	Dalit			Janajati		
	Boys	Total	Girls	Boys	Total	Girls
2003	14.5	15.5	15.0	NA	NA	NA
2004	14.2	14.8	14.6	24.4	23.0	23.6
2005	15.7	26.8	21.5	36.4	34.9	35.6
2006	16.9	16.9	16.9	37.1	35.7	36.4
2007	19.1	19.3	19.2	41.5	40.4	40.9

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

### 3.4.5 Gross Intake Rate (GIR) in grade 1

By definition GIR indicates the total number of new entrants in grade one, regardless of age, expressed as a percentage of the population of five year age. GIR also indicates the general level of access to primary education. More over, it indicates the capacity of the education system to provide

access to grade 1 for the population of five-year age (the official school-entrance age population). This indicator can be used as a substitute to Net Intake Rate (NIR) in the absence of data on new entrants by single years of age. A high Gross Intake Rate indicates a high degree of access in the entrance of primary education.

The graph 3.6 shows the trends of GIR in grade 1 from 2001 to 2007. The GIR is an indicator that shows the enrolment pattern of students in grade 1 compared to the prescribed age group population (i.e.5 year age group children). The analysis shows that the trend of GIR fluctuated during the period 2001-07. It indicates there was 122.9% GIR in 2001, which was reduced to 101.3% in 2002 then gradually increased to 117.1% in 2003. With the implementation of the EFA (2004-09) programme the GIR has drastically increased and reached to 148% in 2006 then it decreased to 145% in 2007. Although the government has set a target to reduce the GIR to 110% by 2009 but it remains to 145% in 2007. The GIR trend in grade 1 suggests more under and over aged children is enrolled in grade 1 in 2005-07 (See Annex: XV).

**Graph 3.6 GIR trend in grade 1 by sex, 2001 – 2007**

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

### 3.4.6 Gross Enrolment Rate (GER) and Net Enrolment Rate (NER) by level

By definition GER shows the total enrolment in a specific level of education, regardless of age, expressed as a percentage of the eligible official school-age population corresponding to the same level of education in a given school-year. GER is widely used to show the general level of participation in a given level of education. It indicates the capacity of the education system to cover the overall enrolled students of a particular level of education irrespective age-group. It is used as a substitute indicator to net enrolment ratio (NER) when data on enrolment by single years of age are not available. Furthermore, it can also be a complementary indicator to NER by indicating the extent of over-aged and under-aged enrolment. This indicator shows the overall coverage of an educational system in relation to the population eligible for participation in the system. This ratio is useful for those who are interested in the overall participation of the school-age population. A high GER generally indicates a high degree of participation, whether the pupils belong to the official age-group or not.

Compared to the GER the indicator NER is often considered as a refined indicator. It considers the age of the students and shows the proportion of school aged children enrolled in school. In addition, it gives a precise indication of the age specific children who are out of

formal schooling system. A high NER denotes a high degree of participation of the official school-age population.

### a) Gross Enrolment Rate (GER) at primary level

The following Graph 3.7 shows the trends of GER at primary level, which describes the overall capacity and the total number of students at primary level compared to the respective age groups population (i.e. 5-9 years population for primary level) in the primary education system. The EFA has targeted 104 GER for 2009 but it has remained 138.5% in 2007. The graph reveals that the GER at primary level has fluctuated over the academic year 2001-2007 (See Annex: XVI).

### b) Net Enrolment Rate (NER) at primary level

The graph 3.8 above shows the NER trends in primary education from 2001 to 2007. It indicates that the enrolment of the prescribed age group children seems to have increased

continuously. Over all, in 2001 there were 81.1% of the 5-9 years age group children enrolled in primary schools. This percentage increased to 89.1% in 2007. This indicates, although the progress is slow it is in line with the targets of EFA 2004-09.

The increment in NER shows the enrolment of the prescribed age group children in the primary level is increased from 2001 to 2007. The analysis shows that although the trend of NER in total is increasing, the trend of gap between boys and girls was continued same up to 2004 and it became closer from 2006-07 (See Annex: XVI).

The following graph 3.9 shows the trends of gaps between GER and NER for 2001-2007. The wider gaps between GER and NER are found in the academic year 2005-2007 than in the academic year 2001-04. Although the gap is reduced in 2006-07 than in the academic year 2005, it shows more over aged children have enrolled at primary level than the correct age group children particularly in the academic year 2005-07. The wider gap between two indicators shows the direct impacts in the efficiency of the school education system.

### c) Gender Parity Index (GPI) in GER and NER at primary level

GPI<sup>5</sup> is the ratio of the female to the male. A value of less than one indicates a difference in favour of male; a value above one indicates a difference in favour of female; a value between 0.97 and 1.03 indicates the parity in the participation of male and female in education system.

The following table 3.8 shows the trend of Gender Parity Index (GPI) in Gross Enrolment Rate (GER) and Net Enrolment Rate (NER) at primary level. By definition, the GPI in GER explains the status of total participation in education whereas the GPI in NER explains the age specific participation in education with the gender perspectives.

The analysis of GPI in GER shows there was 0.86 GPI in 2001 and that remained the same up to 2003. Similarly, it started to increase from 2004 by 0.91 and reached to 1.01 in 2007. It

<sup>5</sup> The GPI in NER and GER at primary level is calculated by taking the NER/GER for girls and divided by the NER/GER of boys to assess gender parity in enrolment.

indicates that the participation of girls against boys in primary education is getting better in each year and has almost reached equality.

Similarly, table 3.8 presents the GPI in NER in 2001 was 0.86 and it increased to 0.87 in 2002 and this rate continued up to 2004. It shows; with the implementation of EFA programme in 2004, the girls' participation of specific age groups student was significantly increased and the GPI in NER reached 0.93 in 2005 and 0.96 in 2006 and 2007. The analysis of the GPI in GER and NER at primary level shows, although the overall participation of girls is almost satisfactory, there are variations among and within the districts (Annex XIX).

**Table 3.8 GPI Trend in GER and NER at primary level, 2001-2007**

GPI	2001	2002	2003	2004	2005	2006	2007
In GER	0.86	0.86	0.86	0.91	0.95	0.99	1.01
In NER	0.86	0.87	0.87	0.87	0.93	0.96	0.96

Source: School Level Educational Statistics of Nepal, 2001-2003 and Flash I Reports 2004-07

The map 3.3 below indicates the Gender Parity Index in NER at primary level in 2006 by district. In 2006, the average NER at primary level was 0.96. Out of 75 districts 6 districts from central Terai: Parsa, Bara, Rautahat, Sarlahi, Mahottari, and Dhanusha as well as a district from far-west hill, Baitadi have a GPI below 0.87 which indicates a gender differences in favour of boys. Similarly, there are 51 districts with a GPI range between 0.97 and 1.03 (Annex XVII).

**Map 3.3 Gender Parity Index (GPI) in NER at primary level, 2006**

### 3.5 Lower secondary level enrolment

The lower secondary education system in the country consists of the three grades, 6-8. The share of enrolment at lower secondary level of the total enrolment in Flash I, 2007 is 22.1%. The promotion rate in grade 5 is 82.0% which resulted in pressures at lower secondary enrolment along with a ratio of 1:3 (i.e. one lower secondary level equal to 3 primary levels).

The table 3.9 and graph 3.10 show the enrolment trends at lower secondary level in 2003-07. Compared to the total enrolment of 1,210,059 in 2003 the enrolment reached 1,443,515 in 2007 with a 4.5% annual average growth rate. The total share of girls' enrolment at lower

secondary level is 47.1% in 2007. Among the four eco-belts the highest share of girls' enrolment is in Hilly belt and the lowest is in Mountain belt. The average annual growth rate in enrolment at lower secondary level is 4.5 % from 2003 to 2007. The highest increment has observed in Mountain belt whereas the lowest increment is observed in Hills belt. The increment in enrolment at lower secondary level is mainly attributed to the policy of providing a 100 percent salary to teachers appointed in approved positions and the provision of scholarships for Dalit and girls students (CERID, 2005b) (See Annex XX).

**Table 3.9 Enrolment trends at lower secondary level by eco-belt, 2003–2007**

Eco-belt	2003		2004		2005		2006		2007	
	Girls	Total	Girls	Total	Girls	Total	Girls	Total	Girls	Total
Mountain	30,286	74,680	47,132	112,612	39,354	91,826	36,509	84,884	41,650	95,076
Hills	236,094	520,450	325,974	696,343	286,258	606,060	269,909	557,749	294,310	598,875
Valley	52,544	118,945	50,525	104,235	59,234	123,566	49,820	101,528	69,456	144,489
Terai	208,764	495,984	229,527	531,807	243,877	553,344	250,359	556,973	274,657	605,076
Total	527,688	1,210,059	653,159	1,444,997	628,723	1,374,796	606,597	1,301,134	680,072	1,443,515

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

**Graph 3.10 Average annual growth at lower secondary level (2003-2007)**

### 3.5.1 Enrolment at lower secondary level by types of school

The table 3.10 below shows the share of students at lower secondary level by types of schools in 2003-07. The share of enrolment at lower secondary level in community schools was 86.7% in 2003 and reached 87.0% in 2007. The enrolment share in institutional schools has been seen fluctuated in the period of 2003-07. The share of enrolment by sex at lower secondary level is quite different in the types of schools. It shows the share of girls in community schools is higher than the boys whereas it is just opposite situation in the institutional schools. It indicates the attitude of parents in choosing the institution for their children's education (See Annex: XXI and XXII).

**Table 3.10 Percentage of enrolment by types of school, 2003-2007**

	All types of community schools			Institutional schools		
	Girls	Boys	Total	Girls	Boys	Total
2003	88.3	85.6	86.7	11.7	14.4	13.3
2004	90.6	89.0	89.7	9.4	11.0	10.3
2005	93.1	91.7	92.4	6.9	8.3	7.6
2006	88.4	86.2	87.2	11.6	13.8	12.8
2007	88.3	85.8	87.0	11.7	14.2	13.0

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

### 3.5.2 Share of enrolment at lower secondary level by social groups

The following table 3.11 presents the trends of Dalit and Janajati enrolment share at lower secondary level in 2003-07. The total share of Dalit students in total enrolment at lower secondary level is 8.6%, 6.8%, 7.8%, 9.5% and 9.8% in the academic years 2003, 2004, 2005, 2006 and 2007 respectively. It indicates that the share of Dalit enrolment is decreased in 2004 and increased to 9.8% in 2007. With the increment of the total share of Dalit enrolment the share of girls' enrolment also gradually increased in the academic years 2005-07 (See Annex: XXIII).

The table 3.11 below also shows the trends of Janajati students' share in total enrolment at lower secondary level in 2004-07<sup>6</sup>. The total share of Janajati students in total enrolment at lower secondary level is 28.9%, 35.2%, 38.6% and 40.3% in the academic years 2004, 2005, 2006 and 2007 respectively. It indicates that the share of Janajati is increased from 2004-07 both in the total and girls' enrolment (See Annex: XXIV).

**Table 3.11 share of Dalit and Janajati enrolment at lower secondary**

Year	Dalit			Janajati		
	Girls	Boys	Total	Girls	Boys	Total
2003	7.0	9.9	8.6	0.0	0.0	0.0
2004	6.4	7.1	6.8	29.6	28.3	28.9
2005	7.4	8.2	7.8	36.2	34.4	35.2
2006	9.0	9.9	9.5	39.6	37.7	38.6
2007	9.4	10.2	9.8	41.6	39.0	40.3

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

### 2.5.3 GER at lower secondary level

Graph 3.11 below shows the trends of GER at lower secondary level in 2001-2007. Over all the trends of GER at lower secondary level is fluctuated in the academic year 2001-07. It indicates the GER 63.2% in 2001 decreased up to 2003 and then increased by 80.3% in 2004 but this rate again declined in 2005 and 2006. After that the rate again increased by 78.8% in 2007. The similar trend was found both for girls' and boys' GER (See Annex: XVII).

<sup>6</sup> The enrolment of Janajati for 2003 was not collected and covered in the system.

**Graph 3.11 GER trends at lower secondary level by sex, 2001-2007**

Source: School Level Educational Statistics of Nepal, 2001-2003 and Flash I Reports 2004-07

### 3.5.4 NER at lower secondary level

The graph 3.12 shows the trends of NER at lower secondary level in 2001-2007. The NER trend at lower secondary level from 2001 to 2007 indicates that the participation of specific age group student seems to be increasing. The NER from 39.9% in 2001 to 52.9 in 2007 shows a significant improvement in the net enrolment at lower secondary level. There is a big gap in the boys and girls' NER in all academic years. However, the increasing trend of NER for girls shows the participation of correct age group girls' student is increased from 33.7% to 49.6% at lower secondary level (See Annex: XVII).

**Graph 3.12 Trends of NER at lower secondary level, 2001 – 07**

Source: School Level Educational Statistics of Nepal, 2001-2003 and Flash I Reports 2004-07

### 3.5.5 Gender Parity Index in GER and NER at lower secondary level

The following table 3.12 shows the trends of Gender Parity Index (GPI) in Gross Enrolment Rate (GER) and Net Enrolment Rate (NER) at lower secondary level in 2003-2007. The analysis shows on average there was 0.83 GPI both in GER and NER in 2003 which reached

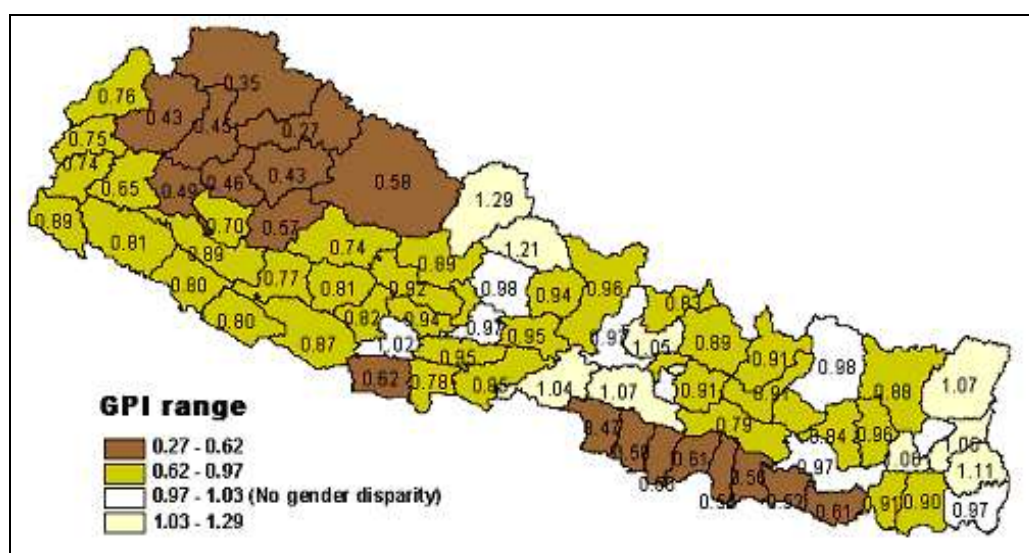

at 0.93 for GER and 0.88 for NER in 2007. The increasing trends of GPI in GER and NER indicate that the participation of girls against boys has been increased (See Annex XIX).

**Table 3.12 GPI Trend in GER and NER at lower secondary level, 2003-2007**

GPI	2003	2004	2005	2006	2007
In GER	0.83	0.85	0.81	0.84	0.93
In NER	0.83	0.84	0.87	0.84	0.88

The map 3.4 below shows the lower secondary level GPI in GER in 2006. It indicates the average GPI in GER at the national level is 0.84 and out of 75 districts 9 districts have achieved the parity in gross enrolment at lower secondary level. Most of the districts have less than 0.97 GPI in GER, which indicates a gender differences in favour of boys. Large disparities (less than 0.50% GPI) are found in mid and far western mountain districts ( Mugu, Humula, Bajhang, Jumla, Bajula, Kalikot, Achham), and in the Terai district ( Parsa) (Annex XVII).

**Map 3.4 Gender Parity Index (GPI) at lower secondary level (GER), 2006**

### 3.6 Secondary level enrolment

Out of total enrolment at all levels of education the share of enrolment in secondary level is 10.3% in 2007. In 2007 the promotion rate from grade 8 to 9 is 84.3% which resulted in increment of enrolment at secondary level.

The table 3.13 and the graph 3.13 below show the enrolment trends at secondary level in 2003-07. With the 7.0% annual average growth rate, the total enrolment of 511,092 in 2003 reached 671,183 in 2007. It indicates the trend of girls' enrolment has been significantly increased in the period of 2003-2007. The total share of girls' enrolment at secondary level also increased from 43.8 to 46.0% in 2003-2007. Among the four eco-belts the highest share of girls' enrolment is in Valley belt and the lowest is in Mountain belt (See Annex: XX).

**Table 3.13 Trends of enrolment at secondary level by eco-belt, 2003–2007**

Eco-belt	2003		2004		2005		2006		2007	
	Girls	Total	Girls	Total	Girls	Total	Girls	Total	Girls	Total
Mountain	11,151	28,555	15,712	38,530	15,054	33,988	20,363	45,789	17,050	40,679
Hills	93,407	209,869	123,405	271,622	111,625	238,667	144,057	300,287	125,990	266,020

**Graph 3.13 Average annual growth rates at secondary level (2003-2007)**

### 3.6.1 Enrolment at secondary level by types of school

The table 3.14 shows the share of students at secondary level by types of schools in 2003-07. The share of enrolment at secondary level in community schools was 84.6% in 2003 and reached 85.1% in 2007. The enrolment share in institutional schools has been seen fluctuated in the period of 2003-07. The share of enrolment by sex at secondary level is quite different in the types of schools. It shows the share of girls in community schools is higher than the boys whereas it is just opposite situation in the institutional schools. It indicates the attitude of parents in choosing the institution for their children's education (See Annex: XXI and XXII).

**Table 3.14 Percentage of enrolment by types of school, 2003-2007**

	All types of community schools			Institutional schools		
	Girls	Boys	Total	Girls	Boys	Total
2003	85.7	83.8	84.6	14.3	16.2	15.4
2004	87.6	85.9	86.7	12.4	14.1	13.3
2005	91.1	89.6	90.3	8.9	10.4	9.7
2006	88.0	86.1	87.0	12.0	13.9	13.0
2007	86.4	84.0	85.1	13.6	16.0	14.9

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

### 3.6.2 Share of enrolment at secondary level by social groups

The following table 3.15 presents the trends of Dalit and Janajati enrolment share at secondary level in 2003-07. The total share of Dalit students in total enrolment at secondary level is 5.6%, 8.1%, 5.1%, 5.3% and 6.4% in the academic years 2003, 2004, 2005, 2006 and 2007 respectively. It indicates that the share of Dalit enrolment is decreased in 2005 and increased to 6.4% in 2007. With the increment of the total share of Dalit enrolment the share of girls' enrolment also gradually increased in the academic years 2006-07 (See Annex: XXIII). The table 3.15 below also shows the trends of Janajati students' share in total enrolment at secondary level in 2004-07<sup>7</sup>. The total share of Janajati students in total enrolment at secondary level is 30.2%, 31.8%, 29.9% and 37.0% in the academic years 2004, 2005, 2006 and 2007 respectively. It indicates that the share of Janajati is fluctuated in 2005 and 2006 (See Annex: XXIV).

**Table 3.15 Trends of Dalit and Janajati enrolment at secondary**

Year	Dalit			Janajati		
	Girls	Boys	Total	Girls	Boys	Total
2003	4.9	6.0	5.6	0.0	0.0	0.0
2004	7.9	8.3	8.1	31.3	29.4	30.2
2005	4.5	5.6	5.1	32.1	31.6	31.8
2006	4.8	5.7	5.3	30.6	29.4	29.9
2007	5.9	6.9	6.4	38.4	35.8	37.0

### 3.6.3 GER at secondary level

The following graph 3.14 shows the trends of GER at secondary level in 2001-2007. Over all the trends of GER at secondary level is in increasing pattern. It indicates the GER 43.8% in 2001 increased up to 2004 and slightly decreased by 49.3% in 2005 but this rate again increased in 2006-07. The trend of girls' GER is increasing but for boys' it is fluctuated over the consecutive years (See Annex: XVIII).

Source: School Level Educational Statistics of Nepal, 2001-03 and Flash I Reports 2004-07

<sup>7</sup> The enrolment of Janajati for 2003 was not collected and covered in the system.

### 3.6.4 NER at secondary level

The graph 3.15 below shows the trends of NER at secondary level in 2001-2007. The NER trend at secondary level from 2001 to 2007 indicates that the participation of specific age group student seems to be increasing. The NER from 25.5% in 2001 to 35.3 in 2007 shows a significant improvement in the net enrolment at secondary level. There is a big gap in the boys and girls' NER in all academic years. However, the increasing trend of NER for girls shows the participation of correct age group girls' student is increased from 20.9% to 32.8% at secondary level (See Annex: XVIII).

### 3.6.5 Gender Parity Index in GER and NER at secondary level

The following table 3.16 shows the trends of Gender Parity Index (GPI) in Gross Enrolment Rate (GER) and Net Enrolment Rate (NER) at secondary level in 2003-2007. The analysis shows on average there was 0.80 GPI both in GER and NER in 2003 which reached at 0.88 for GER and 0.87 for NER in 2007. The increasing trends of GPI in GER and NER indicate that the participation of girls against boys has been increased (See Annex XIX).

**Table 3.16 GPI Trend in GER and NER at lower secondary level, 2003-2007**

GPI	2003	2004	2005	2006	2007
In GER	0.80	0.82	0.86	0.88	0.88
In NER	0.80	0.82	0.82	0.88	0.87

Similarly, the map 3.5 below shows the GPI in GER at Secondary level in 2006. The GPI for GER at the national average is 0.88 and there are 39 districts where the GPI is below the national average. Out of those districts, there are 7 districts with GPI below 0.50. The low GPI in GER at the secondary level is found mostly in western Hilly districts.

On the other hand, out of 75 districts 4 districts (Parbat, Dhankuta, Ilam and Bhaktapur) have achieved more than 1.03 GPI in GER at secondary level. This indicates a gender difference in

favour of girls. It shows there are 14 districts with a GPI range between 0.97 and 1.03. Similarly, large disparities are found in mid and far western Hilly and Mountain districts (Annex XIX).

Map 3.5 Gender Parity Index (GPI) at secondary level (GER), 2006

## Chapter IV

### INTERNAL EFFICIENCY

#### 4.1 Background

Internal efficiency relates to the use of resources, and refers to the internal dynamics of the educational system in transforming inputs and processes into outputs (entrants into graduates). The EFA programme has emphasised to increasing the efficiency of the education system.

#### 4.2 Internal Efficiency at primary level

The following graph 4.1 explains the percentage of promoters, repeaters, and dropouts at primary level in 2007. The highest repetition rate is found in grade 1, which shows still the most serious problem exists in grade 1. It indicates the underage children are enrolled in grade 1 due to the lack of pre-preparation of children for schooling and also the absence of ECD/PPC classes. It shows the higher the grade the lower the repetition rate at primary level.

The dropout rate is the percentage of students enrolled in a given grade in an academic year who are not enrolled in any grade during the following school year. In total the average dropout rate in grade 1 is 16.1% of this 15.6% for girls and 16.5% for boys. Similarly, in total the average dropout rate in grade 5 is 10.2% of this 9.9% for girls and 10.5% for boys. Over all the internal efficiency at primary level shows the lowest promotion rates and the highest repetition and dropout rates are prominent in grade 1. This indicates that the government including school management, stakeholders and local government agencies need to pay proper attention to reducing the repetition and dropout of the children at primary level (See Annex: XXV\_A to XXV\_C).

**Graph 4.1 Internal Efficiency at primary level by grade, 2007**

Source: Flash I Reports 2007

The following graph 4.2 explains the distribution of repetition rate and dropout rate at grade 1 by district in 2007. This graph shows there are 14 districts (Solukhumbu, Sarlahi, Dolakha, Sindhupalchok, Rautahat, Manang, Myagdi, Parbat, Baglung, Rolpa, Rukum, Surkhet, Jajarkot, Dolpa) those have high repetition and dropout rates while, there are 17 districts (Ilam, Dhankuta, Khotang, Udayapur, Saptari, Kavrepalanchok, Kathmandu, Rasuwa, Makwanpur, Chitawan, Syangja, Kaski, Mustang, Kapilbastu, Banke, Mugu, Kailali) those have low repetition and dropout rates than the national average (See Annex: XXV\_A to XXV\_C).

**Graph 4.2 Internal Efficiency at grade 1 by District, 2007**

### 4.3 Trend of Internal Efficiency at primary level

Promotion rate shows the efficiency and quality of the education system. It is the percentage of students promoted to the next grade in the following school year. The following graph 4.3 depicts the comparison of promotion rate in 2006 and 2007. It shows compared to the promotion rate in 2006 the promotion rate in all grade is slightly increased in 2007. The promotion rate by grade reveals that higher the grade the higher the promotion rate. The lowest promotion rate is found in grade 1 which indicates about half of the students in grade 1 are either repeating or dropping out from the system.

Also the graph shows the comparative trends of repetition and dropout rates at primary level by grade. Over all it indicates the decreasing trends of repetition rate in all grades at primary level. High repetition rate is an indication of wastages in education. Although, the repetition rate is decreasing from 2006 to 2007 still the highest repetition rate is prominent in grade 1. Similarly, over the entire dropout rate in 2007 is lower than in 2006. An increasing dropout trend indicates issues of quality and wastage in education. The highest dropout rate is found in Grade 1 (Annex: XXV\_A-C & XXVI\_A-C).

This trend of internal efficiency at primary level indicates that government needs to pay proper attention to reduce the dropout especially in lower grades of primary education.

#### 4.4 Survival Rate to grade 5<sup>8</sup>

The survival rate to grade 5 indicates the proportion of children enrolled in grade 1 who eventually reach to grade 5. The following table 4.1 shows the trend of survival rate to grade 5 in 2003-07. Overall the trend is increased, but the rate for girls is fluctuating in 2004 and 2005. On average the survival rate to grade 5 in 2007 was 81.1% of this 78.6% for girls and 83.4% for boys. If this trend of survival rate to grade 5 would be keeping up the EFA targets of 85% for 2009 and 90% for 2015 could be achieved.

A high student survival rate to grade 5 depicts the education system is more efficient and capable to make retain the students from lower grades in the system with minimum wastage. The analysis shows still some of the districts in Terai belt (such as Sarlahi, Bara, Rautahat, Dhanusha, Mahottari, Parsa, Kapilbastu, Siraha, Saptari) have the low percentage of survival rate to grade 5, that suggests the government need to pay special attention to these districts.

**Table 4.1 Trend on Survival Rate to grade 5 by sex, 2003 - 2007**

Student	2003	2004	2005	2006	2007
Girls	60.2	80.6	75.9	77.4	78.6
Boys	59.3	72.4	82.1	83.0	83.4
Total	59.7	76.2	79.1	80.3	81.1

Source: School Level Educational Statistics of Nepal, 2003 and Flash I Reports 2004-07

<sup>8</sup> The survival rate for 2006 was calculated by using the proxy formula. The result will be quite different if the reconstructed cohort model was used. If the survival rate was calculated by using the reconstructive cohort model the survival rate would be 47.0% for the primary level and 44.9% for boys and 49.5% for girls. The discrepancy between the rates when calculating the survival rate using these two internationally used approaches shows that the results depend on the chosen approach.

#### 4.5 Internal Efficiency at lower secondary level

The following bar graph 4.4 shows the grade wise promotion rates at lower secondary level in 2007. The average promotion rate for grade 6, 7 and 8 is 83.4%, 83.8% and 84.3% respectively. Compared with the girls' promotion rates, the boys' promotion rate is slightly higher in all grades. Similarly, the repetition rate is higher in grade 6 than in grades 7 and 8. Likewise, the dropout rate in grade 7 is slightly higher than in the grades 6 and 8 (See Annex XXVII\_A-C).

**Graph 4.4 Internal Efficiency at lower secondary level, 2007**

Source: School Level Educational Statistics of Nepal, 2001-03 and Flash I Reports 2004-07

#### 4.6 Trend of Internal Efficiency at lower secondary level

**Graph 4.5 Internal Efficiency at lower secondary level, 2006 and 2007**

The graph 4.5 above shows the comparison of promotion, repetition and dropout rates at lower secondary level in 2006 and 2007 by grade. Compared with the promotion rate in 2006

it has increased in all grades in 2007. While the repetition and dropout rates in 2007 have slightly decreased in all grades. The decreasing trend of repetition and dropout rates at lower secondary level is an indication of better efficiency of the system and lower wastage of the resources (See Annex: XXVII\_A-C and XXVIII\_A-C).

#### 4.7 Internal Efficiency at secondary level

The following bar graph 4.6 shows the grade wise promotion rates at secondary level in 2007. The average promotion rates for grade 9 and grade 10 are 85.0% and 85.6% respectively in 2007. Compared with the girls' promotion rates, the boys' promotion rate is slightly higher (See Annex: XXVII\_A\_C).

Source: School Level Educational Statistics of Nepal, 2001-03 and Flash I Reports 2004-07

The following table 4.2 shows the comparison of promotion rate at secondary level in 2003, 2006 and 2007. The table explains the incremental changes in promotion rate at secondary level. In total the promotion rate has reached 85.0% in 2007 from 76.9% in 2003. There are not significant differences between girls' and boys' promotion rate in the all academic year (See Annex: XXVII\_A-C & XXVIII\_A-C).

**Table 4.2 Promotion rate in grade 9, 2003, 2006 and 2007**

Year	Promotion rate in Grade 9		
	Girls	Boys	Total
2003	76.8	76.9	76.9
2006	84.3	84.9	84.7
2007	84.6	85.3	85.0

Source: School level Educational statistics of Total 2003 and Flash I Report 2007

The following table 4.3 shows the repetition rates at secondary level by grade in 2003, 2006 and 2007. Overall, the trend of repetition rate has decreased in both grades 9 and 10 from 2003 to 2007. It also indicates that the wastage in secondary education has been getting lower and lower within the academic year 2003-07 (See Annex: XXVII\_A-C & XXVIII\_A-C).

**Table 4.3 Repetition rate at secondary level by grade, 2003, 2006 & 2007**

Year	Grade 9			Grade 10		
	Girls	Boys	Total	Girls	Boys	Total
2003	17.0	15.2	16.0	19.7	16.6	17.9
2006	10.0	9.1	9.5	8.3	7.0	7.6
2007	9.7	8.9	9.3	8.2	6.8	7.5

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

The following table 4.4 depicts the comparison of dropout rate in grade 9 in 2003, 2006 and 2007. Overall, compared with the dropout rate in 2003, the dropout rate in grade 9 has decreased in 2006 and 2007. Interestingly, girls' dropout rate is lower than boys in all academic years (See Annex: XXVII\_A-C & XXVIII\_A-C).

**Table 4.4 Dropout Rate at grade 9, 2003 & 2007**

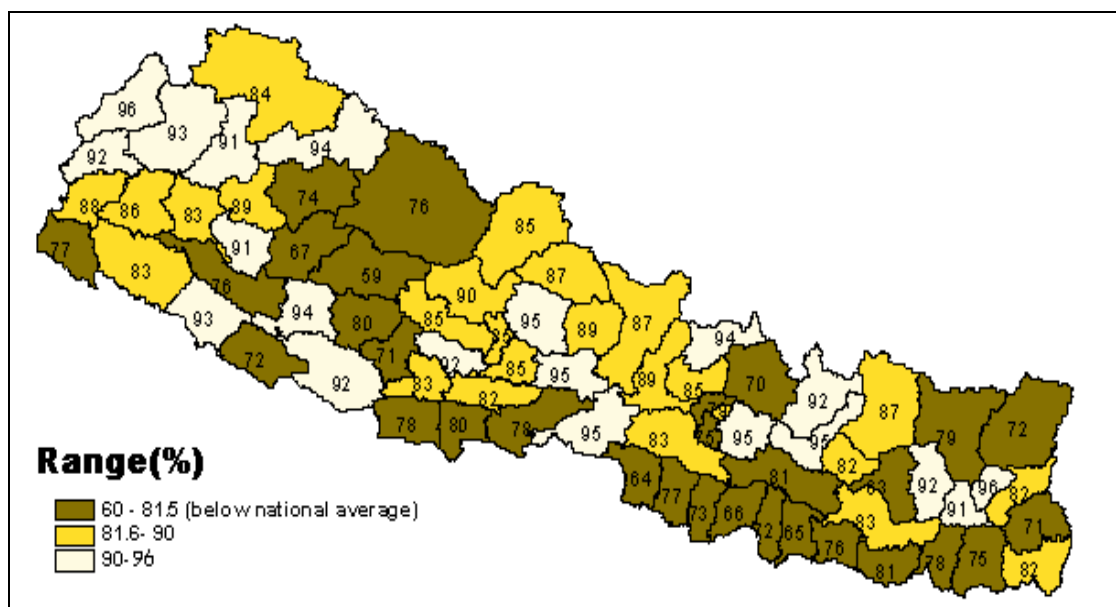

Year	Girls	Boys	Total
2003	6.2	7.9	7.2
2006	5.6	6.0	5.8
2007	5.7	5.9	5.7

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

#### 4.8 Transition rate to lower secondary and secondary levels

The transition rate is the number of pupils admitted to the first grade of higher level education (e.g. grade 6/ grade 9) in a given year, expressed as a percentage of the number of students enrolled in the final grade of the lower level (e.g. grade 5/ grade 8) of education in the previous year.

**Map 4.1 Transition rate to lower secondary level (grade 6), 2006**

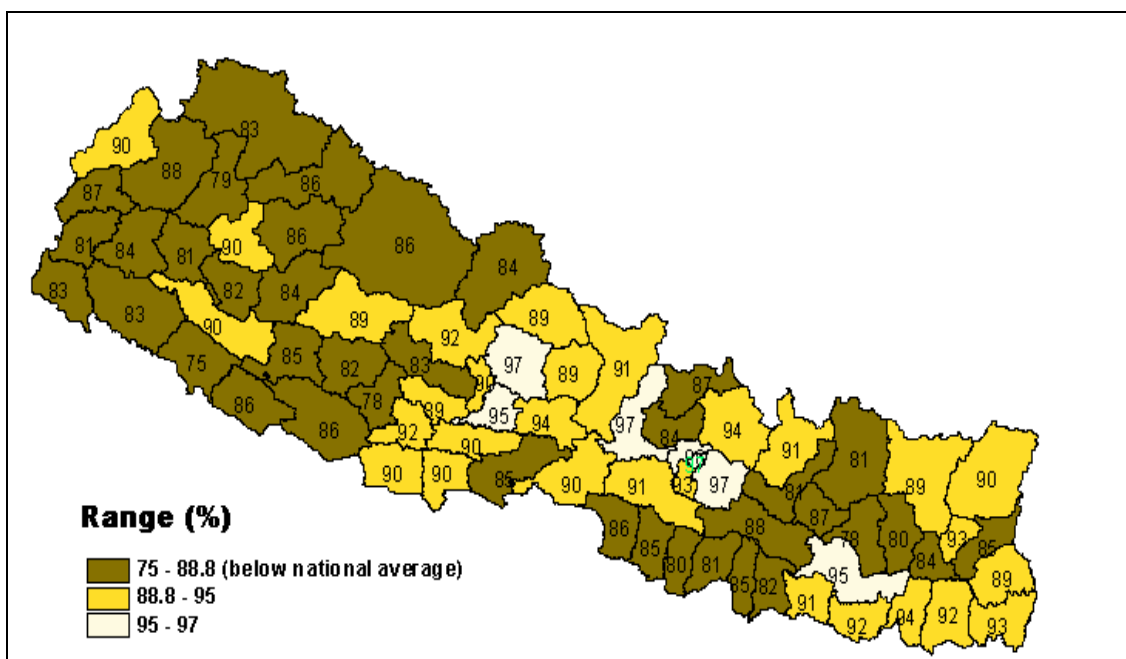

The map 4.1 above and the map 4.2 below present the transition rates to lower secondary and secondary level by district in 2006. In the academic year 2006 the total transition rate to lower

secondary was 81.6% of this 82.3% for girls and 81.1% for boys. Districts with more than 95% of transition rates are Ramechhap, Darchula and Terahthum and the districts with less than 70% are Rukum, Khotang, Parsa, Dhanusha, Sarlahi, and Jajarkot.

Similarly, in the academic year 2006, on average the total transition rate to secondary level was 88.8% of this 87.8% for girls and 89.6% for boys. Out of the 75 districts, 4 districts (Bhaktapur, Dhading, Kaski and Kavrepalanchok) from Hill and Valley belts have been able to achieve more than 95% transition rate whereas the districts Bardiya, Pyuthan, Khotang, Bajura and Rautahat have less than 80% transition rate in 2006 (See Annex XXIX).

In addition to this, in the academic year 2007, on average the total transition rate to lower secondary level is 83.4 of this 84.0% for girls and 82.9% for boys. Likewise on average transition rate to secondary level is 89.5 of this 88.7 for girls' and 90.1 for boys. this indicates compared to the academic year 2006 the rate of transition from lower level to upper level is in increasing trend (See Annex XXIX).

**Map 4.2 Transition rate to secondary level (grade 9), 2006**

## Chapter V

### TEACHER INFORMATION AND RATIOS

#### 5.1 Primary level teacher

The following table 5.1 shows the distribution of teachers at primary level by school types and eco-belts in 2007. At the primary level in total 116,846 teachers were reported in Flash I 2007 from all types of schools. Out of the total number of teachers the share of female teacher was 35.5 %. Compared with the total share at national level, the highest share of female teacher was in the Valley belt which accounts 62.1% whereas the Mountains belt has the lowest share of female teachers followed by the Terai and Hills belts.

The share of female teacher in community schools is 30.9% whereas in institutional schools it is 55.9 %. The table below indicates that most of the community schools except Valley have less than 50 % share of female teachers whereas in institutional schools except Mountain and Terai belts have more than 50% female teacher. Hence to achieve the EFA target of 50 % female teachers by 2009, the enforcement of female teacher recruitment policy at primary level need urgent attention (See Annex: XXX).

**Table 5.1 Number and share of female teachers at primary level by school type, 2007**

Eco - Zones	Total Teacher				Community schools' teacher				Institutional schools' teacher			
	Female	Male	Total	% of Girls	Female	Male	Total	% of Girls	Female	Male	Total	% of Girls
Mountain	3,248	9,262	12,510	26.0	3,070	9,009	12,079	25.4	178	253	431	41.3
Hill	18,573	37,051	55,624	33.4	15,446	34,413	49,859	31.0	3,127	2,638	5,765	54.2
Valley	6,509	3,976	10,485	62.1	2,078	1,919	3,997	52.0	4,431	2,057	6,488	68.3
Terai	13,145	25,082	38,227	34.4	8,928	20,591	29,519	30.2	4,217	4,491	8,708	48.4
Total	41,475	75,371	116,846	35.5	29,522	65,932	95,454	30.9	11,953	9,439	21,392	55.9

Source: Flash I Report 2007

The following table 5.2 shows the share of teacher in total number of teachers by types of schools and eco-belts at primary level on the basis of reported number of teacher in Flash I 2007. Out of total number of reported teachers in 2007 the total share of community schools' teacher is 81.7% of this 71.2% and 87.5% is female and male teachers. The share of teacher in institutional schools is 18.3 % of this 28.8% is female and 12.5% is male. This indicates that compare to the share of male teacher the share of female teacher is higher in institutional schools (See Annex: XXX).

**Table 5.2 Share of primary teachers by school type, 2007**

Eco-belt	Total Teacher			% of Community schools' Teacher in total			% of institutional schools' Teacher in total		
	Female	Male	Total	Female	Male	Total	Female	Male	Total
Mountain	3,248	9,262	12,510	94.5	97.3	96.6	5.5	2.7	3.4
Hills	18,573	37,051	55,624	83.2	92.9	89.6	16.8	7.1	10.4
Valley	6,509	3,976	10,485	31.9	48.3	38.1	68.1	51.7	61.9
Terai	13,145	25,082	38,227	67.9	82.1	77.2	32.1	17.9	22.8
Total	41,475	75,371	116,846	71.2	87.5	81.7	28.8	12.5	18.3

Source: Flash I Report 2007

The table 5.3 below shows the share of teacher in teaching profession by social groups and eco-belt at primary level. Compared to the share of Janajati teacher, the share of Dalit and Disabled teacher is considerably low at national as well as in all eco-belts.

The analysis shows, still in the teaching profession the majority of the teachers are found other than the Dalit and Janajati categories. Similarly, out of 41,475 female teachers at primary level in the country 1.2 % is Dalit and 13.9 % is Janajati.

Compared to other eco-belts the highest share of Dalit teachers is in Hill belt and the lowest is in Mountain belt. Likewise, the highest share of Janajati is in Valley belt and the lowest is in the Terai belt. The total share of Disable teacher at primary level is 1.0% of this 0.6% is female and 1.3% is male.

**Table 5.3 Share of primary teachers by social groups, 2007**

Eco-belt	Total Teacher			% of Dalit in total			% of Janajati in total			% of Disable in total		
	Female	Male	Total	Female	Male	Total	Female	Male	Total	Female	Male	Total
Mountain	3,248	9,262	12,510	1.1	2.9	2.4	14.6	15.5	15.2	0.9	1.0	1.0
Hills	18,573	37,051	55,624	1.1	6.1	4.5	14.9	15.2	15.1	0.7	1.4	1.2
Valley	6,509	3,976	10,485	0.4	9.9	4.0	16.4	18.6	17.2	0.4	2.4	1.1
Terai	13,145	25,082	38,227	1.8	4.8	3.7	11.0	16.3	14.5	0.5	1.1	0.9
Total	41,475	75,371	116,846	1.2	5.5	4.0	13.9	15.8	15.1	0.6	1.3	1.0

Source: Flash I Report 2007

## 5.2 Lower secondary level teacher

The table 5.4 below shows the total number of teacher and the share of female teacher at lower secondary level by eco-belt on the basis of reporting in Flash I 2007. Out of 27,903 teachers at lower secondary level 18.6 % are female. The highest share of female teacher is in Valley and the lowest share is in Mountain belt. Compared to the total share of female teacher at the national level the Mountain, Hills and Terai belts have lower share of female teacher at lower secondary level (See Annex: XXXI).

**Table 5.4 Number of lower secondary teachers by eco-belt, 2007**

Eco-belt	Female	Male	Total	Female % in total
Mountain	246	2,255	2,501	9.8
Hills	1,804	10,580	12,384	14.6
Valley	1,633	2,329	3,962	41.2
Terai	1,499	7,557	9,056	16.6
Total	5,182	22,721	27,903	18.6

Source: Flash I Report 2007

The following table 5.5 shows the share of teacher by types of schools in total number of teachers by eco-belts at lower secondary level in 2007. Out of total number of reported teachers in 2007 the total share of community schools' teacher is 73.3% of this 53.9% is

female and 77.7% is male teachers. Similarly, the share of teacher in institutional schools' is 26.7% of this 46.1% is female and 22.3% is male. This indicates that compare to the share of male teacher the share of female teacher is higher in institutional schools in the total number of teacher at lower secondary level.

**Table 5.5 Share of lower secondary level teacher by school types, 2007**

Eco-belt	Total Teacher			% of Community schools' Teacher in total			% of institutional schools' Teacher in total		
	Female	Male	Total	Female	Male	Total	Female	Male	Total
Mountain	246	2,255	2,501	95.1	96.3	96.2	4.9	3.7	3.8
Hills	1,804	10,580	12,384	68.0	87.4	84.6	32.0	12.6	15.4
Valley	1,633	2,329	3,962	33.1	30.1	31.3	66.9	69.9	68.7
Terai	1,499	7,557	9,056	52.9	73.3	69.9	47.1	26.7	30.1
Total	5,182	22,721	27,903	53.9	77.7	73.3	46.1	22.3	26.7

The table 5.6 below shows the share of teacher in teaching profession by their social groups and eco-belts at lower secondary level on the basis of reporting in Flash I 2007. Compared to the share of Janajati teachers, the share of Dalit and Disabled teachers is considerably low at national as well as in all eco-belts.

Similarly, out of 5,182 female teachers at lower secondary level in the country 1.3 % is Dalit and 14.0 % is Janajati. Compared to other eco-belts the share of Dalit teachers is highest in Valley and the lowest is in Mountain belt.

Likewise, in total the highest share of Janajati is in Valley and the lowest share is in Hill belts. The total share of Disable teacher at lower secondary level is 0.9 % of this 1.0 % is female and 0.9 % is male.

**Table 5.6 Share of teacher by social groups at lower secondary level, 2007**

Eco-belt	Total Teacher			% of Dalit in total			% of Janajati in total			% of Disable in total		
	Female	Male	Total	Female	Male	Total	Female	Male	Total	Female	Male	Total
Mountain	246	2,255	2,501	0.8	1.0	1.0	9.3	11.4	11.2	0.0	0.9	0.8
Hills	1,804	10,580	12,384	1.1	4.1	3.7	11.1	9.1	9.4	1.6	0.9	1.0
Valley	1,633	2,329	3,962	1.6	7.6	5.1	20.3	18.2	19.1	0.8	1.7	1.3
Terai	1,499	7,557	9,056	1.3	3.3	2.9	11.5	10.6	10.8	0.5	0.6	0.6
Total	5,182	22,721	27,903	1.3	3.9	3.4	14.0	10.8	11.4	1.0	0.9	0.9

Source: Flash I Report 2007

### 5.3 Secondary level teacher

The table 5.7 shows the total number of teacher and the share of female teacher at secondary level by eco-belt on the basis of reporting in Flash I 2007. Out of 20,674 teachers working at secondary level 11.6 % are female. The highest share of female teacher is in Valley and the lowest share is in Mountain belt. Compared to the total share of female teacher at the national level, the share of female teacher in Mountain, Hills and Terai belts are low (See Annex: XXXII).

**Table 5.7 Number of secondary teachers by eco-belt, 2007**

Eco-belt	Female	Male	Total	Female % in total
Mountain	63	1,604	1,667	3.8
Hills	615	7,840	8,455	7.3
Valley	1,180	2,854	4,034	29.3
Terai	546	5,972	6,518	8.4
Total	2,404	18,270	20,674	11.6

Source: Flash I Report 2007

The following table 5.8 shows the share of teacher by types of schools in total number of teachers by eco-belts at secondary level in 2007. Out of total number of reported teachers in 2007 the total share of community schools' teacher is 67.6% of this 44.8% is female and 70.6% is male teachers. Similarly, the share of teacher in institutional schools' is 32.4% of this 55.2% is female and 29.4% is male. This indicates that compare to the share of male teacher the share of female teacher is higher in institutional schools in the total number of teacher at secondary level.

**Table 5.8 Share of secondary level teacher by school types, 2007**

Eco-belt	Total Teacher			% of Community schools' Teacher in total			% of institutional schools' Teacher in total		
	Female	Male	Total	Female	Male	Total	Female	Male	Total
Mountain	63	1,604	1,667	85.7	94.6	94.3	14.3	5.4	5.7
Hills	615	7,840	8,455	65.9	81.9	80.8	34.1	18.1	19.2
Valley	1,180	2,854	4,034	26.2	27.5	27.1	73.8	72.5	72.9
Terai	546	5,972	6,518	56.8	69.9	68.8	43.2	30.1	31.2
Total	2,404	18,270	20,674	44.8	70.6	67.6	55.2	29.4	32.4

Source: Flash I Report 2007

The table 5.9 shows the share of teachers' in teaching profession by their social groups and eco-belts at secondary level on the basis of reporting in Flash I 2007. Compared to the share of Janajati teachers, the share of Dalit and Disabled teacher is considerably low at national as well as in all eco-belts.

**Table 5.9 Share of teachers at secondary level by social groups, 2007**

Eco-belt	Total Teacher			% of Dalit in total			% of Janajati in total			% of Disable in total		
	Female	Male	Total	Female	Male	Total	Female	Male	Total	Female	Male	Total
Mountain	63	1,604	1,667	0.0	0.9	0.9	19.0	8.0	8.5	0.0	0.2	0.2
Hills	615	7,840	8,455	1.5	3.2	3.1	12.0	8.2	8.5	0.2	0.9	0.9
Valley	1,180	2,854	4,034	1.0	7.1	5.3	14.0	13.9	14.0	0.1	0.7	0.5
Terai	546	5,972	6,518	1.1	2.1	2.0	9.9	7.6	7.8	2.0	0.7	0.8
Total	2,404	18,270	20,674	1.1	3.3	3.0	12.7	8.9	9.3	0.5	0.8	0.7

Source: Flash I Report 2007

The analysis shows, still in the teaching profession the majority of the teachers are found other than the Dalit and Janajati categories. Similarly, out of 2,404 female teachers at secondary level in the country 1.1 % is Dalit and 12.7 % is Janajati.

In total compared to other eco-belts the share of Dalit teachers is highest in Valley and the lowest share is in Mountain belt. Likewise, the highest share of Janajati is in Valley and the lowest share is in Terai belt. The total share of Disable teacher at secondary level is 0.7% of this 0.5% is female and 0.8% is male teachers.

#### 5.4 Teacher training status for all types of school

In general the teacher training is one of the most important factors in quality of education. The trained teachers delivered the effective instruction in the class room teaching learning activities. The following graph 5.1 present the percentage of full trained, partial trained and untrained teachers at primary, lower secondary, and secondary level on the basis of reported number of teachers in Flash I 2007. It indicates that out of total 66.4% of primary teachers, 52.3% of lower secondary teachers, and 70.0% of secondary school teachers are fully trained. The bar graph also reveals that compared with primary and secondary levels, the lower secondary level has higher percentage of partial trained and untrained teachers (See Annex: XXXIII).

#### 5.5 Teacher training status in community schools only

**Graph 5.2 Percentage of trained teacher in community schools by level**

Source: Flash I Report 2007

The graph 5.2 above present the percentage of full trained, partial trained and untrained teachers in community school only at primary, lower secondary, and secondary level on the basis of reported number of teachers in Flash I 2007. It indicates that 70.4% of primary level teachers, 53.3% of lower secondary level teachers and 77.9% of secondary level teachers are fully trained. Compared with the percentage of trained teachers in all types of school, the teachers in community schools have relatively higher share of fully trained. The bar graph also reveals that compared with the primary and secondary levels, the lower secondary level has higher percentage of partially trained and untrained teachers (See Annex: XXXIV).

## 5.6 Ratios

### 5.6.1 School/Student Ratio (SSR) at primary level

School student ratio is the proportion between a school and the size of student enrolled in a particular year. This explains that, a school with a high School Students Ratio (SSR<sup>9</sup>) means high number of students are enrolled in that school.

**Table 5.10 Trend of School /Student Ratios at primary level by eco-belt, 2003-2007**

Eco-belt	2003	2004	2005	2006	2007
Mountain	95.4	107.5	105.3	109.4	103.3
Hills	121.9	136.1	129.7	129.1	124.0
Valley	143.4	158.4	150.6	131.1	111.8
Terai	220.1	240.7	253.4	252.7	231.0
Total	147.6	162.9	163.6	161.8	151.2

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

**Graph 5.3 Trends of School/Student Ratio at primary level, 2003-2007**

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

The table 5.10 and line graph 5.3 above show the trends of an average size of students at primary school for the five consecutive years (2003-2007). In total the average school student ratio is increased from 2003 to 2005 and decreased in 2006-2007.

<sup>9</sup> The ratios are calculated by taking the total number of students of all types of schools and divided by the total number of all types of recorded schools (by level).

The Terai belt has the highest Student School Ratio in all consecutive year whereas the Mountain belt has the lowest Student School Ratio. On average in 2007 there are 16 districts with lower (less than 1:100) School Student Ratio whereas the districts namely Rupandehi, Parsa, Bardiya, Saptari, Rautahat and Mahottari have higher School Student Ratio (more than 1:250).

### 5.6.2 School / Student Ratio at lower secondary level

The following table 5.11 and the line graph 5.4 show the trends of an average size of students at lower secondary school for 2003-2007. In total the average School Student Ratio is increased from 2003 to 2005 and decreased in 2006-2007.

Comparatively, the Terai belt has the highest School Student Ratio in all consecutive year whereas except in 2003 the Valley belt has the lowest School Student Ratio. On average in 2007 there are 13 districts with lower (less than 1:100) School Student Ratio whereas the 8 districts have higher (more than 1:200) School Student Ratio.

**Table 5.11 Trend of lower secondary School / Student Ratios by eco-belts, 2003-2007**

Eco-belt	2003	2004	2005	2006	2007
Mountain	93.1	154.9	112.5	101.1	104.1
Hills	133.8	205.5	159.3	140.8	140.4
Valley	112.9	109.1	108.6	84.3	101.9
Terai	198.2	224.8	204.0	193.8	192.5
Total	146.7	194.3	162.3	146.5	148.2

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

**Graph 5.4 Trends of lower secondary School/Student Ratios, 2003-2007**

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

### 5.6.3 School / Student Ratio at secondary level

The following table 5.12 and the line graph 5.5 present the trends of an average size of students at secondary school level for 2003-2007. The trends of School Student Ratio by eco-belt shows, there are fluctuation in all eco-belts in all consecutive year.

Comparatively, the Terai belt has the highest School Student Ratio whereas the Valley belt has the lowest School Student Ratio in all consecutive year. On average in 2007 there are 28 districts with lower (less than 1:100) School Student Ratio whereas the 11 districts have higher (more than 1:150) School Student Ratio (See Annex: XXXII).

**Table 5.12 Trend of secondary School / Student Ratios by eco-belts, 2003-2007**

Eco-belt	2003	2004	2005	2006	2007
Mountain	76.4	105.3	88.1	108.8	88.6
Hills	100.1	135.7	112.4	133.2	109.2
Valley	75.4	77.2	80.0	62.0	74.0
Terai	143.2	151.3	147.5	158.6	148.1
Total	107.8	129.2	116.5	127.5	113.9

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

**Graph 5.5 Trends of secondary School/Student Ratios, 2003-2007**

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

### 5.6.4 School / Teacher Ratio (STR) at primary level

The School Teacher Ratio is the association between the schools and the number of teaching staff. A low School Teacher Ratio indicates an inadequate number of teachers working in schools which could result in poor student performance and high School Teacher Ratio indicates an adequate number of teachers in schools giving students proper attention for their learning in each level.

The following table 5.13 shows the trend of school teacher ratio (STR<sup>10</sup>) from 2003 to 2007 by eco-belt. The school teacher ratio is gradually declining from 2003-2006, while it has increased in 2007. There has been a visible gap between the required number of teachers and the actual number of working teachers. It suggests there are many community schools newly established which could not receive the adequate number of teacher support from the government.

Comparatively, the Valley and Terai have higher ratio than that of Mountain and Hill belts. Compared to the national average there are wide variations on School Teacher Ratio in the district and school level. In this regard, the government need to undertake appropriate mechanism for the equal distribution of teachers in the districts (See Annex: XXXV).

**Table 5.13 Trend of School / Teacher Ratios at primary level by Eco-belt, 2003 – 2007**

Eco-belt	2003	2004	2005	2006	2007
Mountain	3.1	3.3	2.8	2.6	3.0
Hills	3.5	3.5	2.8	2.8	4.0
Valley	6.6	6.5	6.4	7.2	5.0
Terai	5.3	5.2	3.8	4.2	5.0
Total	4.1	4.1	3.3	3.4	4.0

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

#### 5.6.4 School / Teacher Ratio (STR) at lower secondary level

The following table 5.14 shows the trend of School Teacher Ratio at lower secondary level in 2003 to 2007 by eco-belt. Compared with the total ratio at national level, the ratio in Valley belt is higher and the ratio in Mountain belt is lower in all consecutive year. However, the ratio in all eco-belt has been almost same in 2007. There are 8 districts with below 1:2 School Teacher Ratios whereas 3 districts with more than 1:4 School Teacher Ratio in 2007 (See Annex: XXXIII).

**Table 5.14 Trend of School / Teacher Ratios at lower secondary level by Eco belt, 2003-2007**

Eco-belt	2003	2004	2005	2006	2007
Mountain	2.4	2.7	2.0	2.3	2.7
Hills	3.0	3.2	2.3	2.7	2.9
Valley	6.0	4.9	4.6	4.4	2.8
Terai	3.9	3.6	2.7	3.1	2.9
Total	3.6	3.5	2.7	3.0	2.9

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

#### 5.6.5 School / Teacher Ratio (STR) at secondary level

The following table 5.15 shows the trend of school teacher ratio at secondary level in 2003 to 2007 by eco-belt. Over all the School Teacher Ratio at secondary level has been changed from 2003-2007. Compared with the total ratio at national level, the ratio in Valley belt is

<sup>10</sup> The ratios are calculated by taking the total number of teachers of all types of schools and divided by the total number of all types of recorded schools (by level).

higher and except in 2007 the ratio of Mountain belt is lower in all consecutive year. There are 5 districts with below 1:2 School Teacher Ratios whereas 8 districts with more than 1:5 School Teacher Ratio in 2007 (See Annex: XXXIII).

**Table 5.15 Trend of School / Teacher Ratios at secondary level by Eco belt, 2003-2007**

Eco-belt	2003	2004	2005	2006	2007
Mountain	3.7	3.8	3.0	2.8	3.6
Hills	4.0	3.9	3.1	3.2	3.5
Valley	7.6	6.4	4.2	5.4	3.8
Terai	5.1	4.4	2.9	3.5	3.4
Total	4.9	4.4	3.2	3.6	3.5

Source: School level Educational statistics of Nepal, 2003 and Flash I Report 2007

### 5.6.6 Student/Teacher Ratio (STR) in all types of schools

The Student Teacher Ratio assesses the level of human resource input in the schools in relation to the number of students. Generally, a high Student Teacher Ratio indicates that more number of students in the class which affects less attention in class room teaching learning activities and the low Student Teacher Ratio means smaller class size, which enables the teacher to deliver better instructions for each individual students resulting in better performance.

The following table 5.16 shows the Student Teacher Ratio<sup>11</sup> by level for all types of schools on the basis of reported number of teacher and students in 2007. Over all at the national level the total student teacher ratio for primary level is 1:38, for lower secondary level is 1:52, and for secondary level is 1:33. Compared to other regions the Terai belt has the highest STR at all level of education (See Annex:XXXV).

**Table 5.16 Student/Teacher Ratio by level and Eco-belt, 2007**

Eco zone	Total	Primary	Lower secondary	Secondary
Mountain	31	30	38	24
Hill	36	34	48	31
Valley	25	22	36	20
Tarai	53	51	67	44
Total	39	38	52	32

Source: Flash I Report 2007

**Table 5.17 Trend of Student/Teacher Ratio by level, 2003-2007**

Eco-belt	2003	2004	2005	2006	2007
Primary	36	40	49	45	38
Lower Secondary	41	56	60	49	52
Secondary	22	29	36	35	32

The table 5.17 above shows the trend of Student Teacher Ratio by level from 2003 to 2007 for all types of schools. As compare to the STR in 2005 the trend of STR was low in 2003-04

<sup>11</sup> The ratios are calculated by taking the total reported number of student of all types of schools and divided by the total reported number of teacher in all types schools (by level).

and it decreased in 2006 at all level of education. Compared to the STR in 2006 the STR in 2007 has increased at lower secondary level. Overall the STR at lower secondary level has been observed higher in all academic years (See Annex: XXXIV).

### 5.6.7 Student/Teacher Ratio (STR) in community school

The table 5.18 below shows the Student Teacher Ratios<sup>12</sup> (STR) in the community schools by level and eco-belt. The STR in community schools is calculated on the basis of total number of students in community schools and the total number of recorded teachers in the community schools by level. On average the STR in community schools is 1:42 at primary level, 1:69 at lower secondary level and 1:42 at secondary level in the school year 2007-08. It indicates that the highest STR is found at lower secondary level by 1:69, whereas the STR at both primary and secondary level is found by 1:42 in the community schools.

The analysis shows the highest STR is in Terai region at all levels whereas except at primary level the lowest STR is in Mountain region at both lower secondary and secondary levels. It also indicates the STR at primary level in Valley is comparatively low than in the other region and level of education. Similarly, the district level analysis shows there are 40 districts with the lower STR than in the national average (1:42) of this, 3 districts namely: Manang, Mustang and Bhaktapur districts have the STR less than 1:15 at primary level. Likewise, there are 34 districts with the STR of more than national average; of this 19 districts mostly from the Terai region and some districts from the Hilly region have the STR of more than 1:45 at primary level.

At the lower secondary level, the district level analysis shows there are 45 districts with the lower STR than in the national average (1:69) of this, 4 districts namely: Manang, Mustang, Humla and Dolpa districts have the STR less than 1:25. Likewise, there are 29 districts with the STR of more than national average; of this 19 districts have the STR of more than 1:80 at lower secondary level. At the secondary level, there are 45 districts with the lower STR than in the national average (1:42) of this, 7 districts namely: Manang, Mustang, Humla, Dolpa, Mugu, Bajura and Rasuwa districts have the STR less than 1:25. Likewise, there are 30 districts with the STR of more than national average; of this 15 districts have the STR of more than 1:50 at secondary level (See Annex: XXXV).

**Table 5.18: Student Teacher Ratio in all types of community schools by eco-zone and level<sup>13</sup>**

Eco zone	Total	Primary	Lower secondary	Secondary
Mountain	35	33	49	29
Hill	41	37	64	38
Valley	31	22	54	35
Tarai	60	56	88	53
Total	46	42	69	42

Source: Flash I Report, 2007

<sup>12</sup> The Student Teacher Ratio (STR) is calculated on the basis of recorded number of teachers in the community schools and the reported number of students in community schools by level in the school year 2007-08.

<sup>13</sup> The STR is calculated on the basis of reported number of students and teachers for the respective levels and types of schools.

## Chapter VI

### TEXTBOOKS, TRANSITIONAL LANGUAGE AND SCHOOL PHYSICAL FACILITIES INFORMATION

This section has covered the availability of free textbooks, transitional language supports at primary level and the availability of basic physical facilities in the schools on the basis of reporting from the schools in Flash I 2007.

#### 6.1 Availability of free textbooks at primary level

The availability of free textbooks in time provides to improve and enhance the effective environment of classroom teaching learning activities. Research studies also show that, in time availability of textbooks has a positive impact on student achievement. The government has the programme to deliver free textbooks for all community primary schools' students within the first week of the academic session.

The following bar graph 6.1 presents the availability of textbooks within the first week of the session year 2007. Out of total student 58.4% children have received full set of textbooks and 4.7% have received partial set of textbooks within the first week of the academic session 2007 (i.e. 7 Baisakh 2063). The status of the availability of free textbooks has improved as compared to the same period in the previous academic session, 2006 when 54% students had received free a full set of textbooks. The figure shows still 36.9% student could not received any textbooks by the reference date, which indicates the government should develop an effective mechanism to deliver the free text books in time in all districts (See Annex:XXXVI).

**Graph 6.1 Availability of free textbooks at primary level, 2007**

Source: Flash I Report 2007

#### 6.2 Number of schools with transitional language support

The following table 6.1 presents the number of schools with the transitional language (local language) support in class room teaching learning activities for the students who were not speaking Nepali language as a mother tongue at primary level. The Maithali language was found the most widely used particularly in Terai belt in the primary classes. Likewise,

Tamang, Bhojpuri and Bajika languages were used in more than 100 schools as major languages in grade 1 for the medium of instruction. The teachers used the local languages mostly in the lower grades at primary level. The details are presented in the following table.

In addition to this the languages used mostly in the districts are: **Maithali:** Dhanusha, Mahottari, Sarlahi, Rautahat and Parsa / **Bhojpuri:** Parsa, Rautahat, Bara, Sarlahi and Mahottari / **Tamang:** Makwanpur, Kavrepalanchok, Nuwakot, Rasuwa, Sindhupalchok, Lalitpur, Dolakha, Ramechhap, Sindhuli, Sarlahi, Bhaktapur, Parsa, Rautahat and Chitwan / **Bajika:** Rautahat and Sarlahi / **Nepali:** Sarlahi, Lalitpur, Rautahat, Dhanusha, Mahottari, Makwanpur and Bhaktapur / **Newari:** Bhaktapur, Lalitpur, Shindhupalchok, Ramechhap, Dolakha, Nuwakot and Kathmandu / **Tharu:** Sarlahi, Bara, Rautahat and Mahottari Sarlahi, Dang, Siraha, Nawalparasi, Banke, Parsa, Chitwan, Udayapur, Bardiya, Makwanpur and Kanchanpur / **Hindi:** Sarlahi, Rautahat and Mahottari / **Awadhi:** Sarlahi and Rautahat / **Magar:** Mahottari, Ramechhap, Sindhuli / **Magahi:** Ramechhap and Dhanusha / **English:** Makwanpur and Sarlahi / **Mewahang:** Makwanpur and Sarlahi / **Others:** Ramechhap, Rautahat, Sarlahi, Lalitpur and Bara.

**Table 6.1 Number of schools with transitional language support**

Languages	Primary Grades						% of Language used in total
	1	2	3	4	5	Total	
Newari	67	47	37	27	26	204	2.7
Maithali	508	499	477	415	394	2,293	30.4
Tamang	792	535	394	148	117	1,941	25.7

### 6.3 Current status of school physical facilities

#### 6.3.1 Drinking water facilities in the school

The EFA programme 2004-09 has focused on providing pure drinking water facilities in all school and has provided the supports to schools for pure drinking water facilities. Based on

the geographical location of the school, the type of drinking water differs from one school to others. The available sources of drinking water in the schools are tap, tube well and others.

The following graph 6.2 and 6.3 shows the types of drinking water facilities in all schools in the country. Altogether, 55.1% schools have the easy access of drinking water facilities, of them the percentage of schools by types of sources of water are 71.7% school have Tap, 21.6% school have Tube well, 3.7% school have Well and 3.0% school have other sources of drinking water. The data shows most of the schools in Terai districts have the easy access of drinking water facilities. It indicates that the government should focus on providing drinking water facilities to all schools especially in Mountain and Hilly districts.

**Graph 6.3 Availability of drinking water facilities by types of source and eco-belt, 2007**

### 6.3.2 Availability of toilet facilities

The EFA programme 2004-09 has focused to provide the supports for toilet facilities to all children in the school especially for girls' students. The following graph 6.4 and 6.5 shows the status of toilet facilities in schools by eco-belt on the basis of reporting to the availability

of toilet facilities in school. Overall 61.9% schools have at least one toilet facility, in addition to this 35.9% schools have common toilets, 33.9% schools have separate toilet facilities for girls and 30.2% schools have separate toilet facilities for teachers.

### 6.3.3 Students Classroom Ratio in community schools

The following table 6.2 shows the Students Classroom Ratio<sup>14</sup> in community schools on the basis of reported number of school for the physical information and the total reported number of students in grade 1-10 in flash I 2007.

The table presents the districts with the highest students classroom ratio which mostly from the Terai belt. Similarly, the districts from the Mountain, Hill and Vellay have the lower

<sup>14</sup> The ratios are calculated by taking the total number of reported students of all types of schools in grade 1-10 and divided by the total number of classrooms of community schools.

student classroom ratios than in the Terai belt. Although the analysis is on the basis of district average, there are wide variations within the schools especially in the Terai districts.

**Table 6.2 Ten districts with highest and lowest students classroom ratio in community schools, 2007**

Districts	Students /Classroom ratio (more than 1:50 students)	Districts	Students /Classroom ratio (less than 1:18 students)
Mahottari	50.3	Manang	3.6
Banke	51.3	Mustang	3.8
Bardiya	51.3	Dolpa	10.2
Bara	54.7	Mugu	15.1
Rautahat	55.3	Humla	15.3
Parsa	56.7	Myagdi	15.9
Gulmi	63.9	Rasuwa	16.4
Dhading	64.6	Lamjung	16.7
Dhanusha	69.5	Darchula	16.8
Saptari	139.9	Bhaktapur	17.1
Rukum	148.9	Kaski	17.9

Source: Flash I Report 2007

### 6.3.4 Health facilities

The following Graph 6.6 shows the access of Health facilities in 2007. In total, 77.3% schools reported that they have the access of health facilities. Compared to other eco-belts the highest ratio is found in Valley belt, and the lowest ratio is found in Mountain belt.

**Graph 6.6 Availability of Health facilities, 2007**

Source: Flash I Report 2007

### 6.3.5 Financial Information

The following Graph 6.7 shows school income and expenditure status in 2007 on the basis of reporting from the schools. The Pie-charts shows out of total income at schools, 38.0% is from government support for teacher salaries, 25.1% for scholarship, 12% for block grants, 6.7% government support for other activities and 18% from others source (i.e. from local community, local government, NGO/INGOs and others). Similarly, out of total expenditures

at schools 55.0% expenditures goes to teacher salary, 10.7 for scholarship, 10.0 for teaching materials, 9.9% for school building and furniture, 9.2% for other activities and rest of the budget for student and teacher benefits and textbooks through the school improvement plan implementation respectively.
