MARKET ASSESSMENT

1	Demand	Land is a primary factor that adds to the cost of doing business in Nepal. Cheap land with accompanying infrastructure has been one of the major demands of industrialists and entrepreneurs. For example: recently, the Request for Proposals called by the Special Economic Zone Authority received an overwhelming positive response from the private sector. Such land is also one of the major requirements of foreign investors.
2	Supply	GoN has formulated and is implementing various place-based policies all directly linked with boosting Nepal's industrial production and exports. The Government is planning to build 14 SEZs with the vision to promote export industry sector. In addition, GoN has committed to establishing industrial estates in each of the seven provinces. However, there are only a few that have been completed and all of them are run by the Government. As of now, no such facility exists that is operated by the private sector.
3	Opportunity	The southern region of Nepal holds an immense potential to be developed as an area of competitive advantage for industry due to connectivity and distance from India. Providing specialized infrastructure for industrial firms to co-locate will help firms reap spillovers from agglomeration effects and make them further competitive. This is especially true for the southern region in Province 5 which already has a bustling industrial scene. There is an opportunity to develop an industrial park that can build on these competitive advantages of the region and further facilitate industrial development.
